

The Amazing Son in Law Chapter (Charlie Wade)

CHAPTER 2638

After the call, Isaac Cameron said to Charlie: "Master, I consulted my friends and also inquired about some overseas channels. Now if I want to go to Syria, the more common route is to fly to Turkey or Iraq first, and then from these two countries. Enter Syria by land.

After speaking, Isaac Cameron said again: "But what is more embarrassing is that Turkey is in the north of Syria, and Iraq is in the east of Syria. However, Damascus, the capital of Syria, is in the southwest of Syria. That is to say, whether it is from Iraq or Turkey. Damascus has to pass hundreds of kilometers of land.

Moreover, the terrain in the Middle East is complicated and the traffic is not very convenient. It takes at least 20 hours for this journey alone.

Charlie frowned and said, "If I remember correctly, the west of Syria should be bordered by Lebanon? And the capitals of the two countries are very close. The straight-line distance is not even 100 kilometers. Is it more convenient to fly to Lebanon first, and then enter Syria from Lebanon?"

Isaac Cameron nodded and said: "Master, I asked about this just now.

"In theory, of course, Lebanon is closer to Damascus, but if civil aviation flies to Lebanon from the country, the route will pass through Syria.

Now the Syrian government forces and the opposition are fighting like rotten pears, and both Ground-to-air weapons, therefore, civil aviation of any country is afraid to fly into its airspace, and can only go around a large circle to avoid Syrian airspace.'According

to the flight route of civil aviation, once it is necessary to bypass Syria, the flight distance must be increased. Two thousand kilometers. With the fastest update

, our business jets will not be able to fly in a single breath. We must find a stopover airport to replenish fuel.

"In this case, we will need to coordinate the stopover and supply airport. It takes another hour or two to take off after landing, refueling, and regular inspections.

"And when I arrived in Lebanon, there was still a big problem. Because it is too close to Syria, the border has been temporarily closed in order to avoid the war. If you want to travel from Lebanon to Syria, you can only sneak across. Borderline'

Charlie nodded, and said solemnly: Even if you want to sneak across the border, a straight distance of less than 100 kilometers will save a lot of time.

Isaac Cameron hurriedly said: "Master, crossing the border is not a joke. Both countries are heavily guarded. In extraordinary times, if someone illegally crosses the border, either party has the right to shoot directly. Moreover, now Syria is not only For the Syrian government forces and the opposition forces, the situation is too complicated to penetrate into it!

Charlie waved his hand and said calmly: "This is actually not a problem. I have my own way to cross the border. "

Speaking, Charlie said a little annoyed: The most important thing is; the flight time is too long, originally it would have to fly at least nine hours, if this detour, it will take another two or three hours to fly, the key is It's a stopover in the middle, and an additional hour or two. If you count it, it will take at least 13 or 4 hours to fly to Lebanon. It's too long. The lives of people over there are too long. I'm afraid things won't be delayed. long

Isaac Cameron also deep in thought all of a sudden, he carefully pondering for a long time, what suddenly thought, blurting out: "Master, for the moment, there is a unique solution that enables you within four and a half hours, flew from Aurous Hill Lebanon! It's just that I can't do this plan, only you can try it yourself. "

Charlie hurriedly asked: "What plan?! Isaac

hurriedly reminded: "Master, do you remember that when you went to Changbai Mountain to ambush the Eight Heavenly Kings in advance, I told you that your grandfather spent a lot of money to buy—— A Concorde?

"The flight speed of the Concorde is 2.5 times that of a civil aviation aircraft. Moreover, the Concorde that your grandfather bought has also been specially modified and upgraded to reduce the aircraft's carrying capacity and increase the aircraft's fuel capacity. One refueling can fly 10,000 kilometers at supersonic speed. There is no need to land on the ground to refuel, and it will take you to Lebanon in more than four hours!
