

The Amazing Son In Law (Charlie Wade)

Wade Chapter 3352-3353

Therefore, he said almost without thinking: "There are many models of Russian-made 152mm artillery, but I guess that the ones that can go to Syria should all be produced in the 1970s and 1980s, or even older models, so the effective range should be About twenty kilometers."

Hunter (Hamid) asked in surprise: "Brother, do you know all this?"

Charlie gave a hum, then asked: "Does the other party have air firepower?"

"No." Hunter (Hamid) said: "The government forces have a total of a dozen or so tattered Su-24s. Most of them lie in the hangar and cannot fly. Those who can fly have to defend the capital and occasionally attack terrorists. , they can't spare any energy to beat as, and it's meaningless for them 24 to come. It's nothing more than to drop a bomb."

As he said, Hunter (Hamid) said again: "As for the gunship, I am not afraid of him coming.

Their gunship performance is not good anyway. I have a lot of shoulder-mounted missiles here, and it's easy to hit helicopters.

I guess they are too. Reluctant to bring a helicopter to die."

Charlie heaved a sigh of relief, and said: "From this point of view, the high probability is a pure ground war, so you don't need to worry for now."

After speaking, Charlie said again: "I suggest you to observe the opponent's intention first, because the opponent's number itself has a great advantage. If they want to attack, they won't bring so many artillery, so their strategic intentions, It should be the same as the ground war between countries decades ago, I want to fight with you in coordination with your guns!"

Hunter (Hamid) hurriedly asked: "What is the rifle coordination?"

Charlie said: "It's the infantry and artillery fighting in concert. To put it bluntly, the artillery has finished the infantry charge, and the infantry cannot charge the artillery bombardment.

In your current situation, the other party should plan to use artillery to cover you. After you blow up your mess, halve your personnel, and cut your combat effectiveness in half, then use armored vehicles to cover the infantry charge."

Hunter (Hamid) agreed and said: "You are right, I think they must want to give me a intensive bombardment first!"

Charlie said: "Don't be afraid of bombing, because your backslope tunnel already exists.

Now it's time to transport all your most precious personnel, materials and equipment to the backslope tunnel first, and then quickly let someone take yours.

The precious helicopter gunship drove away. There are so many people on the other side. Your helicopters are not very useful. You should drive out hundreds of kilometers away and find an unmanned valley or park on the top of a mountain, otherwise the other side will be there for a while. As soon as the shelling started, your helicopters would have to kneel."

"Yes, yes, yes!" Hunter (Hamid) returned to his senses, and immediately ordered the adjutant next to him: "Hurry up and let the helicopter pilot prepare, fly north, fly a hundred kilometers away and find a place to hide!"

It's no wonder that Hunter (Hamid) panicked. Although he had fought government forces for a long time, he had never had a large-scale conflict.

Therefore, his view of the overall situation is not that strong, and at best he is the level of a small guerrilla leader.

Now that the government forces suddenly assembled such a powerful armed force to attack him, he was suddenly at a loss and completely at a loss as to how to fight.

On the contrary, it is Charlie who has never fought, but has considered the problem more comprehensively. At this time, he can remain 100% calm, analyze the situation carefully, and give more reasonable suggestions.

Charlie said to him again at this time: "I probably have a certain impression of the landforms in your place. The surrounding is all hills and mountains, winding and rugged, so you will not advance too fast in the direction, and you should not be too anxious. Let the helicopter leave immediately."

After speaking, Charlie suggested: "You can now let the helicopter help lift some precious heavy equipment into your reverse slope tunnel. At the same time, you have to let your frontline scouts pay close attention to the opponent's movements, when? The other side stopped marching and started to deploy artillery. It is too late to let the helicopter leave."

"The other party has thirty or forty towed artillery. It takes a long time for these towed artillery to go from the towing state to the complete stop, and then to the complete deployment, calculating the coordinates, adjusting the angle, and preparing for the bombardment. You have enough. Time to react!"
