

# The Amazing Son In Law ( Charlie Wade )

## Chapter 3364-3365

Given the power of their towed artillery, the possibility of destroying such fortifications is almost zero.

Unless the use of high-end heavy ground penetration bombs, it is possible to blow up the fortifications.

But this kind of sophisticated weapon can only be mastered by the five permanent nations of the United Nations. Syria's overall firepower level, at best, is the level of the 1960s and 1970s, and it is impossible to obtain such equipment.

Moreover, even if they have such equipment, they cannot cause direct damage to Hunter (Hamid)'s troops.

Because, now in Hunter (Hamid)'s frontal fortifications, there are not a single soldier.

Hunter (Hamid) resolutely implemented Charlie's instructions. Since the opponent was fighting with the infantry coordination, when did the artillery stop and the infantry began to charge, and then mobilized the troops to fight defense.

At this moment, the soldiers were all hiding in the reverse slope tunnel behind them. The enemy's shells hit dozens of rounds, and Hunter (Hamid) didn't even have a wounded one.

While the opposing artillery was bombing, the infantry quickly advanced towards the base. More than an hour later, more than 5,000 troops were close at hand and stopped at the foot of the mountain about two kilometers from the entrance of the base.

At this time, another round of bombing began!

The front slope of the entire mountain body had been blown into darkness, and the small mountain top was quickly devastated.

This is the last round of shelling before the infantry charge. Once the infantry starts to charge, the shelling must be stopped, otherwise a large area of shelling will easily injure one's own people.

However, the opposing commander did not know the situation inside the mountain.

Based on his previous experience, he concluded that Hunter (Hamid)'s troops must have been severely reduced, and the defense forces must have been mostly destroyed, so he immediately ordered the infantry to charge under the cover of armored vehicles!

Hunter (Hamid)'s base is inherently easy to defend and difficult to attack. Once the north and south entrances are cut off, no personnel and vehicles can enter at all. Therefore, armored vehicles cannot directly enter. Provide close range machine gun and artillery support.

In the permanent fortifications on the front, Hunter (Hamid) watched the enemy's armored vehicles grow closer and closer. Thousands of hunched soldiers followed. The soldiers advanced to the foot of the mountain unharmed by the cover of the armored vehicles. , The opposing artillery fired again, launching a new round of shelling on the front slope of the high ground.

This round of shelling lasted for twenty minutes. Twenty minutes later, as soon as the shelling stopped, thousands of soldiers rushed out from behind the armored vehicle, shouting all the way to the high ground.

In the eyes of the opposing commander, as long as the frontal high ground is taken, it is equivalent to taking the entire Hunter (Hamid) base.

This kind of traditional ground battle is of great significance to the high ground. As long as the high ground is taken in a local war, it is equivalent to taking the initiative of the war in this area, which is equivalent to forming a powerful fire deterrent to the surrounding area, and the high ground itself It is easy to defend and difficult to attack. Five thousand people may not be able to attack the high ground where five hundred people are stationed.

When defending, the side occupying the high ground is easy to defend, while the enemy attacking from the low is difficult to attack.

When attacking, the side occupying the high ground initiates a charge like a bamboo, while the enemy defending at a low position is almost insecure, and it is very difficult to even retreat because the entire back will be exposed to the opponent.

Therefore, the opposing commander felt that no matter how many troops Hunter (Hamid) still has, as long as he takes the high ground, and then launches a charge from the high ground to the internal base, the battle can be solved at once!

When thousands of soldiers swarmed up, Hunter (Hamid)'s soldiers immediately began to enter the permanent fortifications of the front slope from the reverse slope tunnel.

After thousands of soldiers from the other side had completely entered the fire range of Hunter (Hamid)'s permanent fortifications, Hunter (Hamid) suddenly ordered by radio: "Fire!"
