

The Amazing Son In Law (Charlie Wade)

Chapter 3406–3407)

Ten minutes later, the shelling of Hunter (Hamid)'s position stopped on time.

On the frontal battlefield, three thousand soldiers carrying hundreds of RPG rockets once again charged towards Hunter (Hamid)'s position.

This group of people had already been beaten back once, knowing that the enemy's firepower was very fierce, so when they launched the second attack, each of them was nervous, for fear of accidentally killing them.

But the military order came forward. Although they were afraid, they could only bite the bullet and rush upwards.

Soon, they once again entered the fire range of Hunter (Hamid) fortifications.

Hunter (Hamid) naturally showed no mercy to this kind of leek delivered to the door, and immediately ordered the fire, and killed as many enemies as possible.

The second round of firefight between the two sides is about to happen!

The five soldiers on the offensive side formed a team, one of them bombed the fortifications with RPG rockets on his shoulders, and the remaining four used machine guns and assault rifles to cover him to ensure that the RPG rockets could hit the opponent's. Fortifications.

This is also the only tactic taught to them by the army that can play a little role in a tough battle.

Originally, the government commander thought that as long as the RPG rockets were loaded, he would not dare to kill all Hunter (Hamid)'s fortifications, but at least he would blow up three or five and make him nervous.

Once he gets nervous, he will naturally put more troops and energy in the front, which greatly enhances the success rate of the side circuitous tactics.

What he didn't expect was that Hunter (Hamid)'s fortifications were very trivial.

The front of each fortification is reinforced and camouflaged in layers along the slope of the mountain itself.

In this case, the attacker carried the RPG up from the bottom of the mountain, and the trajectory was almost parallel to the slope of the mountain, making it difficult to hit the fortifications.

So in this way, the rocket will either directly scratch the front slope of the fortification, or it can only barely hit a little at a very small angle.

For this kind of rocket, the real power must be focused on the front of the target at a 90-degree angle, otherwise, once it explodes while rubbing it, it will basically be no different from scratching it.

Moreover, even if it hits at such a small angle, there is a high probability that it will directly refract the rocket. Not only did it fail to destroy the enemy, the refracted rocket ran around and accidentally injured many of its own people.

And Gorka and his men were still using binoculars to record the location of each of Hunter (Hamid)'s fortifications.

While observing, Gorka commanded: "A sneak attack will be launched later, and all these fortifications must be taken out in the fastest possible time. Once these fortifications are completed, Hunter (Hamid)'s base will be insecure! We will naturally be able to easily win! "

The commanders at all levels around him immediately patted their chests to ensure that all these known firepower points would be removed.

However, they had no idea that the seemingly undefended West Wing directly in front of them had more than 30 firepower points in Hunter (Hamid).

Long before the Gorka led the team to touch them, Hunter (Hamid)'s three hundred soldiers had already ambushed in one step ahead of time.

Originally, according to Charlie's plan for Hunter (Hamid), the interior of these firepower points had to be completely opened up by tunnels.

Moreover, multiple firewalls must be built inside the tunnel. Once the enemy enters the passage from a certain point, the firewall can be used to isolate the enemy in a small area immediately, so as to avoid being penetrated by the enemy.
