

The Amazing Son In Law (Charlie Wade)

Chapter 3432-3433)

Abbas was a beloved general he had cultivated for many years, and now he died tragically in Hunter (Hamid)'s hands. He wanted to smash Hunter (Hamid) into pieces.

Therefore, Chen summoned all the officers of the Wanlong Temple to have a meeting to formulate a combat plan.

More than a dozen military officers on the scene agreed that, based on the current situation, the strength of Hunter (Hamid)'s fortifications has far exceeded their conventional firepower.

The soldiers of the Wanlong Palace are strong in their individual combat capabilities, especially their infiltration and assault capabilities, all of which are almost at the level of special forces.

Therefore, the best way is to take advantage of the unpreparedness and surprise.

Everyone unified the strategic direction, and the next step was to formulate specific tactics.

Since everyone now knows that Hunter (Hamid) has fortifications on the front and west wing, no one can be sure whether there are east and north wings.

As a result, the way to sneak in from the outside was blocked.

Because, if you don't know the enemy's fortifications, if you lie quietly, it is likely to be covered by the enemy's hidden firepower.

No matter how strong their individual soldiers are, they are all flesh and blood. How can they beat the opponents hidden in the steel and concrete fortifications?

Therefore, this plan was quickly passed.

Can't sneak in, the only remaining plan is airborne.

Airborne has a huge advantage, that is, it can directly bypass the opponent's line of defense and airborne in the opponent's hinterland.

If it is this kind of tough battle, the airborne can directly avoid the front slope of the mountain and land directly near the ridgeline of the top of the mountain, making all the fortifications on the front slope of the opponent invalid.

Moreover, as far as they know, Hunter (Hamid) does not have a system of air defense weapons.

Hunter (Hamid) has no air defense radars, no surface-to-air missiles at mid-to-high altitudes, and transport planes flying at a high altitude cannot detect them at all. Even if they do, they cannot threaten them.

Hunter (Hamid)'s only shoulder-fired anti-aircraft missile can be used to hit helicopters, but the other ones are basically useless.

In this way, the soldiers of the Wanlong Temple can perform skydiving at night and jump directly near the top ridgeline.

Chen's plan is to send a thousand paratroopers into two parachuting echelons, which will be parachuted 20 minutes apart.

Moreover, the two echelons landed in the southern part of the base and the other in the northern part of the base. After landing, they assembled separately.

The reason for being divided into two echelons is to have a double insurance.

If one of the echelon is discovered by the enemy, the discovered echelon will immediately find a cover to fight with the enemy, attract the enemy's firepower, and ensure that the other echelon can successfully penetrate the defense.

Two echelons, 1,000 people, and directly bypassed the enemy's frontal defense. In Chen's view, this tactic was foolproof enough.

However, at the same time, Hunter (Hamid) was also preparing for a surprise attack by the paratroopers.

The plan Charlie gave was very practical to him.

Because he bought a lot of explosives long ago in order to build fortifications.

This kind of explosive is very powerful and can explode even thick rocks, so if it is used to bury the explosive point, the power is amazing.

And his soldiers also went to the base that was bombed into ruins, looking for all kinds of suitable metal objects, and then put them in buckets, and transported them bucket by bucket to the explosion point set by Hunter (Hamid).

Hunter (Hamid) was afraid that the opponent would be a beheading operation, so this time more than 140 explosion points were arranged in all directions of the entire base, and almost all the explosives in stock were studded.

He feels that as long as he can survive this wave, it doesn't matter if he runs out of explosives.

But if you can't resist this wave, even if there are more explosives left, it doesn't make sense.

So just put them all on, in this case, even if the opponent's airborne armored vehicle can blow it up!
