

The Amazing Son In Law (Charlie Wade)

Chapter 3434-3435)

After nightfall, a military airport in Damascus was extremely busy.

In order to drop a thousand soldiers from the Ten Thousand Dragons Temple onto Hunter (Hamid)'s base, Syria's only few transport planes were all drawn in. In addition, two cargo planes were urgently called from civil aviation.

A total of six aircraft are responsible for the flight mission tonight, and Chen also selected the strongest 1,000 elites from the more than 8,000 Wanlongdian soldiers, and let them be fully armed to prepare for the early morning airborne.

In order to kill the enemy in one shot, Chen allocated all the high-end equipment to these thousand people.

This includes a set of the best individual weapons for each person, a best bulletproof vest, a lightweight bulletproof helmet, a set of head-mounted night vision equipment and multiple thermal imaging cameras.

This high-end standard equipment is expensive, and there are very few purchase channels. Even the Wanlong Palace cannot achieve one set per capita.

Chen felt that since it was a night raid, night vision equipment was simply a magical weapon. At night when the visible distance of the naked eye is less than five meters, soldiers with night vision devices are almost as if they are on the hook, and they have great advantages.

On the other hand, our own soldiers have very strong protective equipment. When the enemy is in contact with each other, even if the enemy's firepower is covered, our own soldiers can guarantee that the key is not shot, which can further increase the advantage.

In addition, Chen also specially equipped these thousand soldiers with a very cruel weapon, incendiary grenades.

This incendiary grenade is a standard equipment of the US military. It is similar in principle to napalm, except that it is shaped like a grenade, which is convenient for individual soldiers.

The incendiary grenade uses thermite reaction, which will produce a high temperature of up to 3000 degrees after the explosion, and even steel can be melted.

If two are thrown into an almost completely enclosed concealed fortification, it is enough to burn the hidden soldiers into coke.

It does not matter if the internal space of the concealed fortification is large. When this kind of incendiary bomb is fully burned, it can exhaust the internal oxygen, and even if the people inside cannot be burned, it will be suffocated to death.

In Chen's view, using this weapon to attack Hunter (Hamid)'s concealed fortifications is the most appropriate.

The weapon is superior, the vision is superior, the defense is superior, and the combat power is superior. Chen believes that his thousand elites will definitely cause great damage to the opponent.

And in the military camp next to the airport, five thousand government soldiers are also in the final assembly.

This is also Chen's third set of insurance. If the Wanlong Temple soldiers fight fiercely after airborne, thousands of government soldiers from the periphery will immediately launch an assault, and they should work together to annihilate the enemy.

And these five thousand soldiers no longer use the daytime combat plan. They no longer carry towed artillery and a large number of artillery shells. Instead, they directly use nearly a hundred vehicles of various types to quickly set off to Hunter (Hamid)'s base. In a few hours, he will be able to reach the foot of the hill at Hunter (Hamid) Base.

While the 1,000 soldiers in the Wanlong Palace were still checking their equipment, these 5,000 soldiers had already set off. Their movement speed was not as fast as that of the plane, so they had to set off one step earlier.

As for the soldiers of the Wanlong Temple, they will board the plane at one o'clock in the morning, and then take off within half an hour to the sky over Hunter (Hamid)'s base.

While the soldiers were inspecting the equipment, Chen was still explaining the tactics to them, so that they must give full play to and use their advantages and do their best to ensure the smooth completion of the mission.

At one o'clock in the morning, the soldiers carrying their parachute bags began to board the plane in an orderly manner.

Chen also personally boarded one of the military transport aircraft.

Although he will not lead a parachute jump himself, he will use the communication equipment on the military transport plane to collect real-time battle conditions on the battlefield, so as to provide tactical command as soon as the soldiers need themselves.
