

# Billionaire CEO Won't Leave

## Chapter 486

"It's all arranged. Don't worry. Just relax. Doctors are professional and trust them." Bai nianxi sits beside the hospital bed and looks at Kang Mobei lying on the bed. It seems that he is comforting him and saying something to comfort himself.

"I'm not worried. You're by my side. I have nothing to worry about," he said with a smile

White read Xi Nu lips, slightly bitter smile.

Doctors and nurses rushed inside and outside the ward, nervously and orderly preparing for the preoperative work, and quietly accompanied kangmobei for a few hours. Finally, the announcement came:

"the operation will start soon."

Bai nianxi nodded, and several nurses transferred kangmobei to the stretcher truck, and then pushed it to the end of the narrow corridor. The white door of the operating room seemed very serious, which made Bai nianxi more and more nervous.

"If I don't come here, you're trying to hide it from me for the rest of your life."

Leng Buding's voice suddenly came. Bai nianxi suddenly turned back and saw Kang Liqing standing behind him with a gloomy face.

"Dad What are you doing here?" Bai nianxi stammered because of the accident.

Kang Li Qing frowned and sat in the corridor seat in silence.

"I knew you were hiding something from me." Kang Liqing's voice, with a trace of dissatisfaction, but also with full of worry.

Bai nianxi is silent and droops his head. He doesn't know how to respond.

Silence, the passage of time, two people no longer say anything, just waiting quietly, waiting for the good news.

I just don't know how long it will take.

In the operating room, under the action of anesthetics and muscle relaxants, conmobei soon fell into a deep sleep. Several doctors were busy on both sides. The anesthesiologist's eyes continued to look at the vital signs monitor, and conmobei's heart rate remained at 60-70.

The sound of a razor is accompanied by a sound similar to an electric current. The posterior part of kangmobei's brain is cut by a sharp scalpel. With the help of professional equipment, the doctor explores kangmobei's brain to find and locate the precise location of the lesion.

"Diddiddidi!"

"No! The right part of the brain lost signs of brain waves! "

"Suspected rupture of blood vessel!"

"Hemostatic forceps!"

The doctor and nurse immediately fell into a tense emergency treatment, looking at the blood bubbling out of the back of the brain, the doctor's forehead also exuded a layer of sweat due to tension.

"Hoo, brain wave signs have been re monitored."

"The location of the lesion has been located and the blood clot is ready to be removed."

"But the gap is too narrow!"

"Enlarge the incision, scalpel."

Complicated brain surgery, accompanied by unexpected conditions, was carried out in a tense and orderly manner. The detection alarm of the instrument sounded from time to time, which made a group of nurses busy so that their hands were about to be divided into four hands.

.....

Musi left in the sanatorium, quietly accompanied his father to read books and bask in the sun, but speechless, no topic worth carrying out.

Qi Tiancai is busy in his research building, looking at the brain structure model. Qi

Tiancai holds his chin and looks and thinks silently.

"It is inevitable to touch brain structure and corpus cavernosum during operation..." In silence, Qi Tiancai recites the medical terminology, "what are the sequelae of surgery?" How to deal with... "

Even though the sanatorium is far away from the hospital where the operation is being carried out, the atmosphere of waiting in the hospital seems to have spread to the sanatorium.

Qin ruoqing is busy inside and outside the sanatorium. Seeing Mu Sili's continuous silence and Qi Tiancai's continuous thinking, she is not sure whether she can disturb them.

The silence lasted for a long time, she finally made up her mind and walked to Musi. Qin ruoqing pretended to smile and said, "if you are worried, go to the hospital. If you need us, we can help you there."

Hearing this, Musi li felt reasonable, so he nodded gently: "praying for talent, are you busy? I want to take him there with me. If I have any questions, I can ask him for his opinions. "

"Well, I'll call the senior over." Qin ruoqing nodded to the research building.

Qi Tiancai closed his eyes, trying to simulate the gesture during the operation, holding tweezers in his hand, moving on the brain structure model.

Seeing this scene, Qin ruoqing felt that she had been dissuaded. Finally, she went over and asked curiously, "senior, are you worried about the sequelae of brain surgery?"

Qi Tiancai saw that someone came in. After seeing Qin ruoqing, his face remained expressionless:

"the sequelae is inevitable. Just now I simulated it. No matter what I do, I will touch the medulla oblongata and pons. If there is damage to the medulla oblongata, then The medulla oblongata is in charge of swallowing and other functions, which may cause the loss of swallowing function. In addition, the pons contains part of the reticular structure, and the nuclei involved in sleep and awakening, which transmit information from the cerebral cortex to the cerebellum. From the inside out, the abducens nerve, facial nerve and auditory nerve pass through the pons Ah, it's so complicated. "

Qin ruoqing listens with a sense of incomprehension. Even professionals like Qi Tiancai say it's complicated. As a non professional, Qin ruoqing also feels that brain surgery is not so simple."Well, Sili wants to go to the hospital. Let's go with him." Qin

ruoqing goes straight to show her intention.

No matter where he is, it doesn't prevent him from thinking about the Countermeasures for the sequelae, so he nods and goes to the sanatorium with Qin ruoqing. He drives three people to the hospital.

"It's been two hours. Why haven't you come out yet..."

Sitting silently outside the operating room, Kang Liqing finally couldn't stand it and opened his voice in a low voice.

His arrival made Bai nianxi feel a lot of pressure. Originally, there was a lot of pressure, but in order not to let Kang Mobei worry, she always tried to pretend that there was nothing wrong. Hearing the news, she didn't know how to reply.

In the distance of the corridor came the sound of footsteps. Looking up, Mu Sili came with Qin ruoqing and Qi Tiancai.

Seeing Qi Tiancai's expressionless face, Bai nianxi's pressure is even greater, and his inner worry is even more serious.

"I simulated the operation process of the hindbrain. Miss Bai, you have to be psychologically prepared. The sequelae is inevitable." As soon as he arrived at the hospital, Qi Tiancai spoke up and reported some bad news.

Bai nianxi's brain is blank. He doesn't know what to say or what to ask.

Muse had nowhere to put his hands away from embarrassment. He had come to be relieved, but he didn't expect to pray for talent Maybe it's because of his over study that his communication skills are so poor.

"For example?" Bai nianxi settled down and looked at Qi Tiancai with serious eyes.

"If it's light, it's facial paralysis, loss of swallowing function, sleep disorder, etc. if it's heavy Because the cerebellum is the largest part of the hindbrain, and because the cerebellum function is quite complex, the main function is that the cerebellum participates in the interaction between the primary motor muscle and the antagonistic muscle in the static or dynamic movement of the organism, so as to maintain body balance, regulate muscle tension and coordinate muscle movement, mainly to coordinate the random movement of the body, such as the cerebellum is damaged during the operation, Then it will affect the body's athletic ability
