

Campus Master 2371

“Okay.”

Professor Yu said, “This technology is yours, so of course you can make the call. Speaking of which, I, an old man, have also benefited from your light

Ji Feng laughed: “You can’t say that Professor Yu, in fact this is kind of what we did together, if not for your efforts, how could we have completed the test so quickly?”

Professor Yu smiled and made two modest remarks, only more or less still not too willing, saying, “Ji Feng, now that we don’t report it, then if the country needs this alloy technology in the future, will you give it priority?”

Originally, Professor Yu said that he would report the alloy to the relevant authorities after the alloy’s performance had been thoroughly tested, after all, this was definitely a major discovery and had great significance to China’s industry, and he didn’t know how many times he had expressed this to Ji Feng.

At that time, when Professor Yu said he wanted to report it, Ji Feng did not object, but now he suddenly proposed not to report it for the time being, but only to announce it to the public first.

Professor Yu’s heart was a bit drummed.

It was hard to believe that Ji Feng had some other plans?

Or, had Ji Feng contacted a buyer and deliberately put the news out in order to attract more people to buy it so that he could get the highest price?

If this is the case, then this new chrome alloy technology may not end up in the hands of the state. This is because China is not the only country in the world that has money, and moreover, many countries invest heavily in technology that experts in China can’t even imagine, which is something Professor Yu, who has interacted with foreign experts and attended more than one world-class academic conference, knows very well.

Therefore, Professor Yu wanted to ask Ji Feng again, hoping that Ji Feng could give priority to the country’s needs.

Ji Feng naturally understood what was on Professor Yu’s mind at the moment, and he smiled, “Professor Yu, you don’t have to worry about that, if I don’t give this technology to the state, then I definitely won’t give it to anyone else. ...”

Professor Yu then understood that Ji Feng wanted to keep it for himself.

He originally thought that the Tengfei Group was not involved in the industrial field, but mainly in pharmaceuticals and electrical appliances, so even if he got this new alloy, it would not be of much use, but now it seemed that Ji Feng’s ambition was not small.

However, since Ji Feng has this new alloy, which is so strong that it can be said to be outrageous, if the Tengfei Group wants to enter the industrial field, it might not be that difficult!

First of all, even if Ji Feng only produces the same products as other companies, but with this new alloy as the raw material, the quality of its products can throw the products of other companies in the same industry out of several streets.

In addition to that, there is another point, this new chrome alloy made by Ji Feng is made from some very common raw materials, and Professor Yu is sure that the manufacturing cost is certainly not high, which means that even if this new alloy is used to produce products, the production cost will not be very high.

Consumers are no fools nowadays, they certainly understand that what they need most is good value for money. It is almost predictable how the market will react once Tengfei Group launches its industrial products.

No matter what, as long as the technology does not fall into the hands of foreigners, Professor Yu said in his heart.

In fact, if Professor Yu had known Ji Feng, he would not have had such worries. With Ji Feng's character, he would not have given the new alloy to foreigners even if it was left to mould in his hands for nothing.

At least, before a more advanced alloy was made, Ji Feng would not hand it over to foreigners.

In fact, Ji Feng had another intention when he did not allow Professor Yu to report to him, but it was not entirely because he wanted to use it to combat the Sumida Group and the Lingxia Group.

The development and analysis of the new alloy could of course be handed over to Professor Yu, but Ji Feng would definitely not give his full authority on how to use it.

It was a matter of his next series of plans, and he certainly could not leave the decision to others.

"By the way, Professor Yu, I have another question I want to ask you." Ji Feng suddenly remembered something and said, "Professor Yu, a few of my expert friends are conducting a research that requires an extremely powerful energy device, but now they don't know which energy source to use, Professor Yu, do you have any good ideas?"

"Energy source?"

Professor Yu was stunned, and then shook his head: "It's hard to say, what you said is too vague, I don't even know the basics yet, it's not good to jump to conclusions Ji Feng, those experts you mentioned what project they are researching, what is that energy source used for?"

Ji Feng then hesitated a little: "This"

Professor Yu was busy saying, "Don't misunderstand, I'm not asking for any information, I just have to understand the situation before I can give an opinion, for example, I know that you are researching remote controls, then I will suggest you use batteries as the energy source, if you are researching power stations, then I will suggest you use wind, water or nuclear energy as the energy source. "

"And if you are working on mechanical kinetic energy then I would suggest that you use electrical energy, or various fuels such as petrol, diesel and so on."

Professor Yu said, "It crucially depends on the project you are researching and what energy source is suitable."

Ji Feng nodded slightly and said, "Professor Yu, if I wanted to excite a super laser in a small mobile device, what would be the best energy source to use?"

"A super energy laser?"

Professor Yu pondered for a moment and said, "As far as I understand, many laser emitters use electrical energy, but in a small mobile device, I'm afraid it's difficult to have such a strong power supply, which Ji Feng, for a moment I couldn't think of."

Ji Feng is not much disappointed, because Professor Yu's area of expertise is not in this piece of energetics, and, the laser gun's energy source Ji Feng also already has a spectrum in mind, just how exactly to choose, he has not yet made a decision.

After finishing the call with Professor Yu, Ji Feng could not help but rub his chin and fell into deep thought.

The problem of the new alloy was easier to deal with, but the energy source for the laser gun was hard to choose, or rather, hard to find!

Ji Feng concentrated on his consciousness and entered his mind, and the round intelligent brain immediately greeted him, "Master."

Ji Feng didn't talk nonsense, but asked directly, "Intelligent Brain, now that the new alloy has been developed, according to the results of the calculations, it should be possible to make a laser gun."

Although after the alloy was ready, the inspection work was basically handed over to Professor Yu and several experts from the Tengfei Group to operate, and Ji Feng had not seen the inspection results up to now. But before the real experiment, Ji Feng didn't know how many times he had repeatedly done the deduction and calculation, even putting the error to the maximum in order to make lean improvements.

So at that time, Ji Feng basically had a big topic understanding of the performance of this new alloy. Just now Professor Yu called again, excited and unable to contain himself, Ji Feng could be sure that the performance of that new alloy was definitely better than his own expectation.

Then, the problem of manufacturing laser guns was definitely not too big.

If it didn't work out, then we could find a way to improve it. Anyway, there would be no problem in making laser guns, so Ji Feng came to discuss with the intelligent brain about what energy source should be used.

The intelligent brain said, "Congratulations, master."

Ji Feng was then slightly stunned, "Congratulate me?"

"Yes, master."

Wisdom Brain said, "Wisdom Brain knows that Master has always wanted to make a laser gun, that's why Master studied the basic course hard and kept practicing body building exercises, now Master has gotten what he wanted, of course he deserves congratulations."

Ji Feng then looked at the intelligent brain in consternation, and didn't speak for a long time.

"Master, what's wrong with you?" Wisdom Brain asked.

"Wise Brain, you"

Ji Feng frowned, his eyes flickering sharply as he stared closely at Wisdom Brain and asked, "Wisdom Brain, did you think of saying all these words yourself?"

The intelligent brain said, "Yes, master."

Ji Feng asked, "How do you know to congratulate after getting your long-cherished wish?"

The intelligent brain said, "Based on the analysis of the external information collected by the intelligent brain, it is considered to be human logic that this is the right thing to do."

Ji Feng immediately lost his voice and asked, "You mean, you are actively collecting outside information? You are learning on your own?"

"Yes, master." The intelligent brain said.

"....."

Ji Feng suddenly felt a kind of inexplicable surprise.

Ji Feng knew that Ji Brain could collect information from the outside world, and every time when Ji Feng was in a state of cultivation, Ji Brain would act as a vigilant, and once there was any movement in the outside world, Ji Brain would execute to inform Ji Feng in time.

However, when it comes to collecting information from the outside world, except for the period of time when Ji Feng first met the intelligent brain, the intelligent brain was actively collecting information, and then until now, the intelligent brain has never done so.

To actively collect information from the outside world and analyze it, doesn't this mean that the intelligent brain is learning on its own, or even evolving?

Associated with the fact that the intelligent brain would take the initiative to say hello before, and even become more and more human, Ji Feng couldn't help but wonder, could it be that the intelligent brain had been evolving?

If that was the case, would it be possible that one day, the intelligent brain would not just be an artificial intelligence, then it would also become just like a human being, having its own emotions and knowing how to think on its own, instead of just relying on the database and the originally set programs to run?

This speculation made Ji Feng's mind incredibly complicated.

If the intelligent brain really evolves like a human being, then, in many matters Ji Feng undoubtedly has a better object of discussion, especially in science and technology, then there is no one who can be more suitable for discussion than the intelligent brain.

Can

If the intelligent brain really evolves to that extent, the thought of it will again make Ji Feng feel a vague unease.

If it really came to that point, would the wise brain still be the wise brain it is now? What would it do?

Campus Master Chapter 2372

This kind of evolution-like growth of the Smart Brain made Ji Feng feel very complicated.

On the one hand, he hoped that the Brain would really grow up like a child and eventually become an intelligent brain that could communicate with him normally and even have an autonomous consciousness, instead of being an artificial intelligence program that only relied on programming to run as it was now.

But on the other hand, he was worried that as the brain grew later on, something would happen that he had not expected.

It was a complex state of mind. It could be said that Ji Feng was worried and looking forward to it, and even had a vague feeling of unease, but he could not tell anyone about it, even his closest people.

However, the good thing is that so far, the intelligent brain does not seem to have grown beyond what Ji Feng can bear. Moreover, Ji Feng chatted with the intelligent brain for a while, and found that when the intelligent brain was talking to him, it was still following the database and the program settings in most cases, and there were no other special circumstances.

Ji Feng was more or less relieved.

Next, Ji Feng carefully observed for a while, and only after he was sure that there were no problems at the moment, he exchanged ideas with the intelligent brain about the laser gun's energy source.

"Wise Brain, in your database, is there any other energy source available?" Ji Feng asked.

"No more, master." Wisdom Brain said.

Ji Feng then got a little worried.

In Wisdom Brain's database, there was indeed the most suitable energy source, but it was on the fourth generation laser gun, the most advanced laser gun that Ji Feng had learned from Wisdom Brain's training tutorial, or in other words, it was the most advanced laser gun created by the Gamma civilization before the destruction of the Gamma galaxy.

However, with the new chrome alloy that Ji Feng had created now, he was simply unable to create a fourth-generation laser gun, so there was no doubt that there was no way to use the energy source in the intelligent brain database.

“Then other than that, is there any other good way?” Ji Feng asked, “For example, with the performance of this new alloy that I have created, what kind of laser guns can be made? What energy source would be best to use?”

“A second generation laser gun!” The intelligent brain said.

“The second generation?”

Ji Feng couldn't help but be stunned and said, “A second generation laser gun? But there is no related technology learned in the tutorial”

The intelligent brain said, “Master, according to the tutorial, what the master learns in the training course are the most advanced technologies, but, based on the master's current situation, with the performance of the alloy, the only ones that correspond to it are the second generation laser gun, and the alloy cold weapon.”

“Forget about the cold weapons!” Ji Feng shook his head.

This alloy cold weapon, which he certainly knew, was to use the technology of the Gamma Galaxy to create some daggers, or tools with special purposes, sharp weapons and so on, using the new existing alloys as raw materials. Ji Feng admitted that that kind of thing had great power, especially in close combat, a new alloy dagger was definitely a killing weapon, but the problem was that the technology for making cold weapons was relatively simpler.

What he wanted to know now was how to successfully create a laser gun.

“Intelligent brain, tell us about the second generation of laser guns.” Ji Feng said, “Especially the situation of the energy source used by the second generation of laser guns.”

“Yes, master.”

The round body of the intelligent brain swayed twice, seemingly nodding, “The second generation laser gun, which uses nuclear energy, is a miniature reactor installed into the laser gun as an energy source”

“Nuclear energy is clean, efficient and powerful, and when activated, it will explode with extremely powerful energy, far more powerful than the first generation of laser guns.” The brain said, “According to the database, after the second generation of laser guns were created, they completely replaced the first generation of laser guns in just two months of Earth time, and became the standard weapon of all armies.”

“Nuclear energy”

Ji Feng then couldn't help but have a bit of a headache and laughed bitterly, “That's easy to say, but where am I going to get nuclear energy now?”

Nuclear energy, this thing from the mouth of the intelligent brain is so light, but Ji Feng is aware of, want to get nuclear energy, how difficult it really is.

Not to mention, getting nuclear energy that was suitable for laser guns.

“Apart from nuclear energy, is there any alternative energy source?” Ji Feng asked, somewhat undeterred.

“Master, there is no other energy source information in the database of the intelligent brain.” The intelligent brain said.

“There are no similar energy sources?” Ji Feng asked, “Then what kind of energy source does the third generation laser gun use?”

“The third generation laser gun uses nuclear energy as well.” The intelligent brain said.

Ji Feng then fell into contemplation, unable to find a suitable energy source for a while, Ji Feng would not be discouraged or disheartened, this was just too normal, nothing could be achieved overnight, the long term hard training in the training space had long since honed Ji Feng to have enough patience.

“So

Ji Feng pondered for a moment and asked again, “Wisdom Brain, if I want to employ nuclear energy, are there any requirements?”

The intelligent brain said, “Master, the energy source of the second generation laser gun is based on the principle of fusion reactions of stars, but not all reactors that can produce fusion reactions can be used as energy sources.”

Ji Feng nodded and said, “That I know. Then if I want to use it, what kind of substance would be best to use?”

The intelligent brain said, “Master, the most suitable reactor substance for the second generation laser gun should be one that can easily produce fusion reactions and is relatively more stable. According to the database, deep in the junk star of the Gamma system, there is a kind of alpha ore, which will produce natural fusion reactions

Ji Feng was stunned at the words: “Natural fusion reaction? Wouldn’t that be the same as a star?”

According to Ji Feng’s knowledge, a star like the one in the Tears of the Sun was a star that carried out a fusion reaction on its own, thus generating energy that was so huge that it was unbelievable.

If one wanted to find such an ore, where should one go to find it?

The Wisdom Brain said, “Master, the fusion reaction of the Alpha Ore is the same as that of a star, but the substances that undergo the reaction are not the same.”

The Wise Brain nodded, of course he knew this, and he had just given an example, but the Wise Brain was stubbornly correcting him

From this point on, the Wise Brain was still operating in adherence to the set program.

“So, where can this alpha ore be found?” Ji Feng asked.

“Master, according to the information that the intelligent brain has gathered so far, it has not found the existence of alpha ore in the world where the master exists.” The intelligent brain said.

Ji Feng: “.....”

After talking for half a day, it turned out to be a waste of words.

What was the use of something that simply did not exist in this world, even if it was suitable?

“However, the master can search outside the range of the wise brain’s probing.” The wise brain added.

“What?” Ji Feng was stunned, but in a flash, he understood and asked in a hurry, “Wisdom Brain you mean that you are not saying that there is no Alpha Ore on Earth, but that you have not explored it for the time being because your range of exploration is limited?”

“Yes, master.” The intelligent brain said.

Ji Feng was instantly delighted, “So that’s it! You didn’t say anything clearly, really

Wisdom Brain: “Master, is there a problem with Wisdom Brain’s description?”

“No no.” Ji Feng’s face was covered with a smile as he said, “I just said it casually, so you don’t have to take it to heart.”

“.....”

The intelligent brain did not seem to understand what Ji Feng meant, but through communication with Ji Feng’s consciousness, the intelligent brain was still able to understand Ji Feng’s thoughts, so it did not continue to ask.

At this time, Ji Feng, on the other hand, saw hope.

Alpha ore!

“Hmm, that’s a good path.” Ji Feng secretly nodded his head, if there really was this kind of ore that could automatically perform fusion reactions, wouldn’t each piece of ore be equivalent to a small reactor?

This is simply a natural energy source!

Ji Feng couldn’t help but pat his head, it seems that his own knowledge is still a bit shallow, just once he heard the intelligent brain mention nuclear energy, he thought that it was very difficult to get it, but he never thought that there was actually such an ore.

“Intelligent brain, does this kind of ore have any characteristics?” Ji Feng asked, “You tell us everything about this alpha ore in detail.”

“Yes, master

“Phew!”

Exiting from the intelligent brain space, Ji Feng couldn’t help but let out a long breath, there was finally some hope for the energy source issue.

It was also fortunate that he had asked a few more questions, otherwise, I’m afraid that only now he would have been worried about where to get a small nuclear reactor.

That's the downside of artificial intelligence, it will only answer your questions one way or the other, unlike normal human communication, where it may suddenly remember the answer you need and rush to tell you, or call you directly

But if the intelligent brain really becomes like this

Ji Feng shook his head and shook this thought out of his mind, all he had to do now was to go and find this kind of ore as soon as possible.

.....

The first thing you need to do is to find out what you can do.

In the auditorium of the United University, it had been decorated in a grand manner, with heads of people crowding under the stage and long guns pointing at the stage.

On the podium, Han Zhong was sitting with the old president of United University, Professor Yu and a group of experts from the Tengfei Group with a smile on his face, all of them were red-faced and looked extraordinarily energetic.

It was no wonder that they were in such high spirits, because in half an hour's time they would announce the success of the new alloy, and it was believed that once the news was out, it would cause a huge sensation, and they would be the witnesses of this moment.

Han Zhong turned his head around to see that many executives from the Tengfei Group had come, but neither Xiao Yuxuan nor Ji Feng had come, so he couldn't help but shake his head and smile bitterly.

Campus Master Chapter 2373

Yuezhou.

Hishita Group office.

"Terauchi Kakushita, has the technology that our people brought back been verified?" The office, in the general manager's office, Kato was on the phone with someone, his face full of anticipation.

"Mr. Kato, that's exactly why I'm calling you." The person on the other end of the line said, "According to the expert appraisal of the R&D section within the group, the technology you sent back has been verified and the results have proven that this emerging alloy technology is more than useful to the group."

A flash of joy appeared on Kato's face at once, "So the technology is real?"

"Yes, it's true."

"Excellent."

Kato, who had been through a great deal, could not help but be surprised at the moment, "The Emperor is above!"

The voice on the phone said, "Kato, as you know, China has officially launched an aircraft carrier a few months ago, and we are under a lot of pressure, and so is the government, because there are

restrictions in the peace constitution that our country cannot openly own an aircraft carrier, so if there is a conflict, the situation will be extremely unfavourable for us.”

When Kato smiled, the smile on his face faded as he said, “I am aware of all the situations you have mentioned, His Excellency Terauchi, and I have some not-so-good news for Your Excellency here, according to the information detected by our intelligence officers, China may not only have one aircraft carrier, there seems to be two mega warships under construction at the same time within the East China Shipbuilding Base. ”

“What?!”

The other side of the phone let out a startled cry, “Is that true? Can we be sure that the two mega warships that are being built at the same time are both aircraft carriers?”

Kato said, “I can’t be sure for now. Because the security measures in China are so tight, our people can’t get in, and the people we’ve bribed can’t get inside to get more detailed information. However, based on the information we have gathered from other sources, as well as detecting the strength of China’s purchases in raw materials, both His Excellency the Ambassador and the Mushaikan have made the judgment that the two mega warships under construction are most likely two aircraft carriers.”

“Bugger!”

The man on the other end of the phone burst into a fit of rage, “What are our intelligence officers doing?! China has already started construction, and we still haven’t got accurate information, what a bunch of rice buckets!”

Kato said, “Your Excellency Terauchi, we can’t blame our intelligence officers for this, the main reason is that China has become more and more vigilant against us in the past few years. ...”

“Also, the organisation’s forces in China have been hit very hard, which has also made it impossible for our intelligence officers to spy on them in a timely manner.” Kato said, “But I’m already working on ways to start changing that.”

“Hmm.”

The other man said, “Kato, you have good ideas, like this one, and you’re doing quite well. By using the power of the organisation as a tool and the economy as an offensive, it’s easy to get what we need. It was all thanks to your wisdom that we were able to get the new alloy technology this time.”

Kato said modestly, “It was only what I should have done, Your Excellency Terauchi overpraised me.”

“No! No, I’m not.”

Instead, the other side said, “Kato, you should know very well that at present the Empire is restricted by the peace constitution and cannot openly arm its army like China, so finding weapons that kill in one blow is the most effective way to ensure that we suppress China by force. The new alloy technology you got from China this time will allow the Empire to make great strides in weaponry!”

“So, even if China has an aircraft carrier, it’s not like we don’t have countermeasures.” The other side said, “On the contrary, with the new alloy technology, we will have the ability to destroy these carriers,

so we will continue to maintain our economic advantage over China, as well as our force advantage! And this, you have brought about.”

Kato said, “I am willing to work harder for the Empire.”

“Yossi!”

The other man praised and said, “Kato, continue to do things your way. Be careful, your mission is not to gather intelligence on China, but to suppress it in the economic sphere, and at the same time find ways to gather its top technology; frankly, although the country disgusts me, I have to admit that in some areas, China is indeed at the forefront of the world.”

Kato said, “Yes, Lord Terauchi, I will take care of that.”

“Go for it, Kato-kun.” The other said, “Keep up the hard work, just like this time, so that even if China has an aircraft carrier, it will only end up as a pile of scrap metal!”

“Haj!”

Kato bent down sharply and bowed.

The other man said, “That’s all.”

Kato said busily, “Lord Terauchi, I have one more thing to ask for advice.”

“Speak.”

“It’s like this, in recent times I have felt that there is something unusual about Number One, he seems to be too obsessed with his hatred of a family in China and is not particularly cooperative with my work.”

Kato said, “From what I understand, this family that Number One hates has unparalleled influence and great power in China, and I’m afraid that Number One will be exposed if he is bent on his own way.”

“Well! I already know something about that.” The other party said, “Number One is indeed a little too caught up in his hatred, which is not good for the interests of the organisation or the Empire, and I will remind him of that. Kato-kun, are there any more questions?”

“No more, Terauchi-kagushita.” Kato said.

“Keep up the good work!”

Kato, who hung up the phone, couldn’t help but have a flash of excitement on his face, it worked!

He said in his heart, it was really unexpected that China’s technology in the field of alloys had come to the forefront of the world, he had really underestimated China before.

However, so what?

Now this top-notch alloy technology did not end up in his own hands and thus succeeded as part of the group?

The Chinese are rising, but in front of the empire, they are like a big stupid bear, only stupidly beaten, at most only growling to show their displeasure, but otherwise can not do anything.

And the Empire

The Empire will break through the restraint of the Yankee devils in the shortest possible time and become the world's top power again!

Even more, it will achieve the ultimate goal of the organization!

"..... stupid Chinese people!" Kato smiled triumphantly, and then he began to open his computer, browsing through the information that was converging up from all over the world, gathering what was available in it.

"Knock knock knock"

Just then, there were a few knocks on the office door, and then a young man in a suit walked in quickly and said sharply, "Mr. Kato, please take a quick look at today's news."

Kato frowned and said, "What news? What is going on and why is there such a panic?"

The young man said sharply, "Yes, it's a press conference jointly held by Jiangzhou Tengfei Group and Jiangzhou United University, and it is said that they have jointly developed a newest type of alloy. It will be officially announced in half an hour, and the performance data of the new alloy will be published"

"What's so unusual about that!" Kato said, "There are countless scientists working on alloys in this world, and new ones appear almost every day, but the most useful alloy for the group is already in our hands, so there's no need to worry too much."

"But"

"Well, I'll keep an eye on it, you can go back to your work." Kato waved his hand.

The young man's heart fluttered, so he had to bow slightly and retreat. Mr. Kato was not a generous man, and if he was made impatient, I was afraid there would be no good consequences for him.

At this moment, Kato, on the other hand, was a little angry. The good news that had come back from home had put him in a happy mood, and now that joy was somewhat diluted.

"The latest alloy" Kato grunted, "it can't be some new trick from the Tengfei Group again!"

Although Kato hadn't been in China for too long, he had done an in-depth understanding of the matter because of the Brilliant Group and knew that two of the top power families in China had tried every possible way to stop the cooperation between the Brilliant Group and the Hishita Group.

And one of the sons of one of the top families was Ji Feng. Moreover, he had a very close relationship with the United Group.

According to Kato's understanding, there were many children of high-ranking officials in China who were involved in business in this way, and in fact, many people knew that that Tengfei Group was the property of Ji Feng, or, in other words, the property of the Ji family, a top-ranking family.

Therefore, Kato then suspected that this so-called press conference of some kind was not another tactic played by Ji Feng because he had not achieved his aim of stopping their cooperation before.

However, Kato still turned on his computer and prepared to follow this press conference, at the same time, he picked up the phone and called his right-hand employee in Jiangzhou to find out the news.

.....

“Sister Yu Xuan, it’s a pity that you, the beautiful old boss, didn’t go to the press conference.”

“What’s the pity?”

“If you go to attend, you will definitely be able to cause a great sensational effect, it’s not often that you are such a beautiful and attractive old boss, the launch will definitely hope for countless people’s attention then, and it will definitely be a big success.”

“Rae, you’ve learned to flirt with me too?”

“The actual fact is that you’ll be able to find out if I’m right or not.”

..... Ji Feng had just come down from upstairs when he heard Tong Lei and Xiao Yuxuan gossiping in the living room, while Bai Zhu and Xiao Ying and Han Zhen were laughing lightly beside them.

It was obvious that they were all enjoying this kind of time, peaceful, yet uninhibited, all living together, and like a close family.

“What are you talking about, so happy.” Ji Feng coughed lightly, as if he hadn’t heard their conversation earlier, and asked with a smile.

“We ah”

Xiao Yuxuan’s beautiful eyes flowed as she said, “We were talking, what exactly are you tinkering with when you are hiding upstairs alone.”

Campus Master Chapter 2374

“We ah”

Xiao Yuxuan’s beautiful eyes flowed as she said, “We were talking, you were hiding upstairs all by yourself, what exactly were you pounding away at.”

Ji Feng laughed: “What can I be pounding on, just researching the uses of the alloy.”

Xiao Yuxuan blinked her beautiful eyes a few times and said, “I’m just curious, where exactly did you learn all these skills, I didn’t know you knew so many things before.”

Ji Feng laughed and said, “I know a lot of things, you’ll find out later!”

In his heart, he secretly said, “Even Yu Xuan has doubts, so the others naturally have doubts, so it seems that he was right to bring Professor Yu and the others on board!”

In fact, if you think about it, Ji Feng himself did not study materials science, let alone what machinery, alloys and so on, but in his hands is the successive development of special effects current, Kang Yuan slimming powder, and even 3D television set and so on all kinds of latest technology, if others do not suspect it is strange.

It can be imagined that there must be a lot of people who are interested in the question of the source of their own technology.

Ji Feng also remembered that just a short while ago, Little Uncle had communicated with himself about the problem – there seemed to be some people in the special department who doubted whether his technology was of dynastic origin.

Admittedly, those people were indeed wrong-minded and had ulterior motives, but one had to admit that their suspicions were not at all unjustified.

This is why Ji Feng pulled Professor Yu on board. On the one hand, he could use Professor Yu's professional strength to carry out the most accurate testing and improvement of the alloy, but on the other hand, he could also share some of the firepower for himself.

Now it was clear from Xiao Yuxuan's doubts that it was necessary for him to do so.

"The launch is about to start, right?" Ji Feng changed the topic.

"Well, it's almost time."

Xiao Yuxuan raised her hand to look at her watch and said, "There are still ten minutes left I would like the launch to start soon."

Ji Feng laughed: "Why? Can't wait to enter the industrial field?"

"How can it be that easy to enter the industrial field, just one sentence?" Xiao Yuxuan gave him a blank look and said, "I want the news to spread quickly because I want to see how that Brilliant Group and Lingxia Group will actually react after they know this news."

Ji Feng instantly smiled, "What, want to take the heat out of me?"

"That's right."

Xiao Yuxuan said, "I just want them to know that they think they've beaten my little rascal, but in the end it's just their wishful thinking, our little rascal is a thousand times better than them just by lifting a finger!"

Ji Feng: "....."

Seeing the three Bai Zhu snickering beside him, Ji Feng couldn't help but say, "Can you stop calling me a little rascal"

Xiao Yuxuan pursed her lips and laughed, "What, and call you wrong?"

Ji Feng could only laugh bitterly.

Xiao Ying, however, said, "Sister Yu Xuan is right, we should let them know this news!"

In fact, after Xiao Yuxuan came back from Nan Yue last time, she saw that although Ji Feng didn't say anything, there was still a hint of regret between his eyebrows, obviously, for that trip to Nan Yue did not achieve its purpose, Ji Feng was not so willing in his heart.

Xiao Ying and Xiao Yuxuan are almost inseparable, so she naturally knows that Xiao Yuxuan's heart is also very uncomfortable after seeing this situation, and even, she has heard Xiao Yuxuan say to herself that she must find a suitable opportunity to teach a lesson to the Brilliant Group and the Lingxia Group.

Therefore, Xiao Yuxuan was upset for Ji Feng in her heart, but she just didn't say it out loud.

This time, Xiao Yuxuan arranged the press conference with great fanfare, informing all the news media in Jiangzhou that could be counted in one breath, so it was clear that Xiao Yuxuan still had that incident in her heart, and now she wanted to take a breath for her man.

In fact Xiao Ying and the others all have the same mind.

Usually at home Ji Feng is the pillar of the family, but if Ji Feng is aggravated, they are naturally uncomfortable in their hearts.

Ji Feng couldn't help but feel warm in his heart as he patted Xiao Yuxuan's arm and said, "There's no need to take it too seriously, even if those people really stormed out after knowing this news, they wouldn't let us see it. They may even try to get their hands on the technology of this new alloy, so this next security work must be done properly."

Xiao Yuxuan then said, "I thought of this long ago, so before the press conference was held I had already discussed it with Han Zhong and had Yi Xingchen increase a lot of security personnel No matter what, I am afraid that the technology that the Lingxia Group has gone to great lengths to get from the Brilliant Group will be useless now anyway, I'm happy just thinking about this."

Ji Feng couldn't help but smirk.

"Sister Yu Xuan, Lingxia Group can't be underestimated!" The technology that Lingxia Group has gone to great lengths to buy is null and void, which is certainly a relief, but I'm afraid it won't be much of a threat to Lingxia Group, unless our group can enter the industrial field as soon as possible and seize the market and living space that squeezes Lingxia Group, which is really a relief."

Xiao Yuxuan said, "I know it's not easy to fight the Hishita Group, that's why I'm especially looking forward to today's press conference."

The Lingxia Group, this was definitely a behemoth, and Xiao Yuxuan was naturally aware of it. Especially since this group was a semi-governmental group of companies in Kepong, there was no telling how many cutting-edge technology fields in Kepong depended on the Lingxia Group, so the strength of Kepong's support for the Lingxia Group was definitely imaginable.

This is why Xiao Yuxuan paid extra attention to this press conference. Through this, she wanted to let the Lingxia Group know that you don't think you can do whatever you want just because you are strong, you think you have beaten Ji Feng, but in fact, you are just a joke in this encounter!

Only you, the Hishita Group, would hold that rubbish technology as a treasure!

"Hishita Group"

Ji Feng, however, could not help but tsk his mouth and said, "Actually, then again, the Hishita Group is indeed not to be underestimated."

“Yeah, I even heard someone say before that if there were no more restrictions of the peace constitution within Kepong and no more suppression from Rice, the Hishita Group could build the most advanced weapons in this world at any time, turning Kepong into a world top military power that would even far surpass China.”

Xiao Ying said, “It is said that there are many people within Kepong who believe that China appears to have surpassed Kepong in many fields, but in reality that is just an illusion, in front of Kepong, China is just a big dumb cow.”

Ji Feng laughed, “Let them think whatever they want, the key is that we have to work hard ourselves.”

In his heart, he was looking forward to it. The Lingxia Group, indeed, was very powerful, and their technology was at the top of the world, and they were even at the forefront in some fields.

But

The company’s technology is also at the forefront of the world.

In fact, like Xiao Yuxuan, Ji Feng also wanted to see how the Lingxia Group would react as they watched their advantages turn into a pile of rubbish.

Only, what Xiao Yuxuan wanted to see was immediate, while Ji Feng was expecting that in the near future, the Lingxia Group and those so-called imperial people in Kepong would still think that China was inferior to them or not!

Of course, now Ji Feng was equally looking forward to this press conference!

The general manager of the Hishita Group in China, Kato, in particular, was really proud of himself when he was in Southern Guangdong.

Obviously, he thought he had lost that time!

In fact, that time was indeed a failure, but Kato could never have imagined that just a few months later, the so-called super alloy technology that Kato had gone to so much trouble to obtain would become a pile of rubbish!

Ji Feng believed that the price Kato paid to get the technology from the Brilliant Group was definitely not small. Just because the Wu family insisted on the cooperation between the Brilliant Group and the Hishita Group despite the pressure from many parties, one can imagine that the benefits paid by the Hishita Group were definitely something that the Wu family could not refuse.

But now, I am afraid that these costs will be wasted!

Ji Feng took out his mobile phone and after thinking about it, he dialed He Hongwei’s number and smiled, “Brother Hongwei, do you want to watch a good show?”

He Hongwei was still not able to react to this sudden statement from Ji Feng: “What?”

Ji Feng smiled, “In about a quarter of an hour, the Tengfei Group will hold a press conference to announce the latest alloy that the group has just successfully developed.”

He Hongwei was stunned, “A new type of alloy?”

His mind reacted extremely quickly and immediately thought of something and asked, "It was developed in response to the alloy technology that the Lingxia Group got?"

Ji Feng smiled and said, "It's not accurate to say that, strictly speaking, it's not against, but it can completely suppress that alloy technology obtained by the Lingxia Group."

He Hongwei was stunned at his words, "Really?"

"Of course, when have I ever fooled you?" Ji Feng laughed, "Not to be modest, in front of this new alloy technology from the Tengfei Group, the technology obtained by the Lingxia Group is just a child's toy!"

"Old brother, this is no joke." He Hongwei suddenly became extra serious, and even had a little bit of a sense of worry.

Ji Feng then secretly laughed, he knew that He Hongwei was extra vigilant after he had fallen on his face in Southern Guangdong, and he wanted to raise his eyebrows once too much, that's why he was so uncertain after hearing this news.

Of course, Ji Feng also knew that He Hongwei did not want to lose face in front of the Wu family, especially Wu Zhiyong, because with their incompatible positions, He Hongwei really could not afford to lose face.

So Ji Feng immediately gave He Hongwei an affirmative answer, "Brother Hongwei, this is not a joke, but true news!"

Campus Master Chapter 2375

After receiving Ji Feng's affirmative answer, He Hongwei was immediately unsettled.

He Hongwei had been holding his anger for a long time. Ever since he had formed a deadly feud with Wu Zhiyong, He Hongwei had wanted to find an opportunity to vent his anger.

However, the trip to Southern Guangdong was a bit of a dust-up.

He Hongwei has been thinking for some time now, whenever he has free time, that Wu Zhiyong may have laughed at him behind his back many times.

Apart from Wu Zhiyong, there were also Kato from the Lingxia Group, Zhai Yadong from the Brilliant Group and Shao Jie, all of whom were deeply remembered by He Hongwei.

In particular, when he was in Southern Guangdong, Kato's arrogant and contemptuous attitude had deeply irritated He Hongwei.

If it was only a personal grudge between He Hongwei and Wu Zhiyong, then Kato's contemptuous attitude made He Hongwei's chest burn with hot blood and his heart hold a rage.

It was because Kato's contempt for the whole of China, for the Chinese people, was from the perspective of a Kepongese!

This made He Hongwei extremely angry, but there was nothing he could do about it, because China was indeed inferior to Kepong in terms of top technology and comprehensive national power.

Especially in the field of cutting-edge technology, one had to admit the gap between China and Kepong. Therefore, since his return from Southern Guangdong, He Hongwei has been bent on finding ways to make the Tianyao Group bigger and stronger, and has also started to tilt the focus of the Tianyao Group towards the field of high technology.

However, the development and accumulation of technology is not something that can be done overnight, so He Hongwei knew that he would not have the chance to take out his anger anytime soon, so he could only suppress the anger in his heart for the time being.

However, just when He Hongwei had lost hope in the short term, Ji Feng suddenly told him that the Tengfei Group and the professors from the United University had jointly developed a new alloy that was so advanced that it could turn the super alloy technology that the Lingxia Group had taken great pains to obtain from the Brilliant Group into a pile of rubbish!

This news really lifted He Hongwei's spirits!

Because this meant that the Lingxia Group's attempt to occupy China's high-quality resources and plunder China's top technology had failed, or even failed miserably.

Even if such a fiasco was not enough to seriously damage the Hishita Group, or even if it would only cause the Hishita Group some skin pain, it was enough for He Hongwei now.

At the very least, it means that China has the ability to give Kepong a headache.

It can be imagined how excited He Hongwei was after receiving this news, so He Hongwei, who was always stable and poised, could not help but be silent for a while after listening to Ji Feng, before he sighed in admiration and said, "Older brother, you've done a great job! Brother admires you!"

Ji Feng laughed: "Don't rush to admire first, let's focus on the press conference first!"

"That's right, that's right!"

He Hongwei said, "Press conference, well, this is a good way to let the people of Kepong know that the so-called super-alloy technology they are holding as a treasure is not worthy of being a dish for us!"

Ji Feng laughed: "It's more than that, brother Hongwei, if you can, you might as well pay attention to the next moves of the Lingxia Group, it's not enough just to make them jump in chagrin, you must find the right opportunity to give them another blow!"

He Hongwei immediately understood Ji Feng's meaning, he said, "Ji Feng, you want to take this opportunity to make the Lingxia Group make a mistake, and then use this opportunity to do something?"

Ji Feng said, "Generally speaking, I have this idea, but it's still not clear whether it will work or not, but no matter what, let's get some air out first."

"No problem!"

He Hongwei agreed very quickly, "I'll keep an eye on the movements of the Lingxia Group, as long as they have any movement, I'll tell you immediately."

Ji Feng smiled, "Since that's the case, then wait for the news."

He Hongwei nodded heavily, "I'll be in my office, I'm not going anywhere, I'll be here waiting for good news from old brother!"

.....

Meanwhile, in the auditorium of the United University, the staff had made the final adjustments to the microphones in the venue to ensure that the microphones at everyone's heels were working properly.

On the side of the auditorium podium, a few other staff members had also pulled up the curtain, where a set of slides would be shown, mainly introducing the results of the alloy's performance tests, as well as some brief introductions.

At this time, the press and media were still whispering about what was going on in the audience, not realising what kind of news they were going to cover.

On the one hand, they were here because of the fierce competition in the news industry, so they wanted to get ahead of everyone else in reporting any news they could, and on the other hand, they were here because of the two main organisations holding the press conference.

–Tengfei Group and United University.

It goes without saying that every time they hold a press conference, the news they release will cause quite a stir, from the previous high reward free trial of Kang Yuan slimming powder to the later appearance of 3D TV sets, all of which have caused a wide reaction in the society.

And United University, likewise the highest-ranking institution of higher learning in Jiangzhou, is a place where news is likewise of great interest.

So after receiving the invitation letter from Tengfei Group, all these news media sent their people here, but what exactly Tengfei Group and United University were going to announce today was not yet particularly clear in everyone's mind, only from the banner at the entrance of that auditorium.

A ground-breaking innovation – the latest chrome alloy!

These were the two lines written on the banner at the entrance of the auditorium, but no one here knew what kind of chrome alloy it was or what kind of epoch-making significance it had.

Not many people knew anything about alloys, which is why everyone was talking about what was so special about this new chrome alloy.

But although we don't understand it, we won't easily underestimate it, because it was jointly released by Tengfei Group and United University. If there wasn't something special about it, these two would not have invited so many media to come here, otherwise wouldn't they be asking to be embarrassed?

"Everyone"

At this time, the old headmaster sitting on the podium spoke up, looking at the journalists who had taken their seats at the bottom, the old headmaster was full of red face and said aloud in a medium voice: "First of all, thank you all journalists and friends for coming to this press conference"

With a burst of applause, the simple opening ceremony was over, and the old headmaster was not one to talk incessantly, so after his simple opening remarks, he turned his words around and cut to the chase: “..... by the expert team of the Tengfei Group, and the material science authority of the United University Professor Yu, after painstaking research, has finally developed a newest type of chrome alloy

“Below, we ask President Han of the Tengfei Group to talk about why such a new type of alloy should be introduced in a grand manner.” The old principal said.

“Old Principal this is difficult for me.”

Han Zhong laughed, “I studied arts and sciences, it’s a bit difficult to introduce this science and technology stuff clearly, so I only want to say one thing about this new alloy, it’s a new alloy that no matter how much praise is given, its appearance is definitely the most important achievement of the Tengfei Group from the beginning of its establishment until now!”

Boom!

The reporters at the bottom were astonished, Han Zhong’s words were a bit heavy.

The most important achievement since the establishment of the Tengfei Group?

We know that the Tengfei Group has launched many products, and each of them is quite impressive, but when Han Zhong said this, could it be that this new chrome alloy is even better than the Kang Yuan slimming powder that has caused many girls to go crazy, and the 3D TV set that has overpowered all the electrical companies in the world?

“Of course, I’m afraid that if I introduce it in such a dry manner, people won’t be able to understand the specifics of it.” Han Zhong said, “So, next we’d better hand the microphone over to Professor Yu and let him, the authority, introduce to you what exactly the characteristics of this new chrome alloy are.”

In fact, there was no need for him to say anything, and everyone was eager to know what this new chrome alloy was that could afford such praise from Han Zhong, so they turned their attention to the old man in the middle who had already picked up the microphone.

At this time, Professor Yu, however, stood up and said, “Everyone, first of all, I don’t want to come up here and tell you a string of test data, nor do I want to introduce some boring knowledge theory to you, what I want to tell you is what this new alloy actually does

The new alloy is a very special alloy, and it is a very special alloy.

Whether it’s the old headmaster, or Mr. Han, or Professor Yu, they are all so confident when they speak, so I’m afraid this thing they’re about to announce is really something extraordinary!

“Let’s put it this way, everyone can look at this new alloy as a very special metal, below, I’ll talk about what this special metal can do!”

Professor Yu picked up a piece of alloy roughly half the size of a palm from the table and said, “It is this new alloy, and according to the test results, it is the hardest alloy known in the world, bar none! Also, it has many other properties, such as absorbing radar waves and so on

I’ll cover that later, right now we’re talking about the effects.”

“If we were to use this alloy as a raw material and some other technical means to create a submarine, then I’m afraid that no one would be able to detect this submarine even if it drove under the other side’s aircraft carrier!”

“Wow

The moment these words came out, there was an uproar!

Campus Master Chapter 2376

With Professor Yu’s words, the entire auditorium of Union University couldn’t help but let out an uproar!

Even the old president of United University, who was sitting on the podium, and several executives of the Tengfei Group, including Han Zhong, could not help but be stunned by these words.

They had all known what value this new alloy had before this, but no one had expected Professor Yu to give such a high evaluation.

No!

Strictly speaking, Professor Yu’s words could no longer be regarded as an evaluation, but rather an affirmation.

The key problem was that this affirmation given by Professor Yu was just too risqué!

The first is that this latest chrome alloy can be used to make weapons, and also armed equipment like submarines, which are extremely demanding in terms of materials, and this alone is enough to make everyone look at this new chrome alloy in a different light.

But in Professor Yu’s presentation, this was still only a hair’s breadth.

What really shocked everyone was that Professor Yu had also said – that a submarine made from this new chrome alloy could sneak underneath an opponent’s aircraft carrier without them even noticing!

If Professor Yu was not bragging, then the information revealed in this statement was really shocking!

If Professor Yu is not bragging, then this information is really shocking!

If this is the case, imagine what it would mean if you were to go to war and your opponent’s submarine was directly in front of your battleship and you still didn’t know about it.

All of us here are not fools, we know how important this information is.

Besides, is it just submarines?

What about aircraft?

If there is a bomber that can avoid all detection devices of the opponent, does that mean that a force equipped with such a bomber can bomb any place of the opponent at will?

This information is simply too shocking!

Simply put, if what Professor Yu says is true, it would mean that all the detection devices in the world are now useless, especially in the face of weapons made of this kind of material!

..... said this was a heavyweight bombshell, and I'm afraid no one would disagree.

What's more, the media reporters present associated with more, they even keenly noted that Professor Yu said 'the other side's aircraft carrier', does this mean that with this new chrome material, from this old expert's point of view, China can already compete head-on with some of the top powers purely in terms of military equipment?

So after the outcry, the media reporters present were all excited, knowing that they had come to the right press conference today, and had come for too much value.

Whether the news announced by Tengfei Group and United University was true or not, it was a valuable news report for them.

If the news is true, then there is no need to say anything about its value.

But even if it's false, it doesn't stop the news media from getting value, because if it's false, then the announcement will be a farce and even the Tengfei Group will become a laughing stock, which is also quite a news story!

"May I ask Professor Yu, why do you dare to be so sure, are you saying that you are familiar with all the detection devices in this world?"

However, at this moment, an unholy voice suddenly rang out, "As far as I know, China is very backward in the field of radar and other detection, there is still a big gap from the world's top technology, Professor Yu could it be that after using China's radar in detection, you think that all the radars in the world are at this level?"

The crowd turned their heads to look, but they saw a reporter in the audience stood up and asked a question, everyone took a look and it suddenly dawned on them, no wonder.

The reporter was wearing a T-shirt with a line of Kepong language printed on it. Although many people could not understand what it was, they knew that this person should be from Kepong.

In an international metropolis like Jiangzhou, it is not uncommon to have foreign journalists.

However, the question from this reporter from Kepong still made many Chinese people present feel a tinge of harshness.

In fact, many of the Chinese journalists present also had the same doubts.

It was because what this Peng was saying was true, that China's strength in radar and other fields was not very strong, and there was indeed a considerable gap with the top developed countries, which was why everyone reacted with such consternation to what Professor Yu had said earlier.

Could it be that Professor Yu only took China's top radar for experimentation and assumed that the world's top radar was just that?

However, when this question came out of the mouth of the Kepong people, it still made many people feel uncomfortable.

This is because the contempt that this Kepongese had when he mentioned China's technology could not be concealed in any way.

This person was trying to be prickly, but even more so, he had a contempt for China!

"Damned brats"

A few cynical young journalists cursed, "This is China, when did it become their turn to be nosy!"

But there were others who were worried that the news released by the Tengfei Group and the United University must not be false, otherwise it would really be a disgrace in front of the brats.

Professor Yu, who was on the podium at this time, did not change his face and said aloud, "I have never experimented with any kind of radar, be it from China or abroad."

A stunned look appeared on the face of the reporter, who then snorted, "In that case, I really want to know, where did you get such confidence? I read from the materials that Professor Yu is an authoritative expert in the field of materials science and mechanics, but not in the field of weapons!"

Professor Yu said, "Yes, it's true that I don't know much about weapons, but that doesn't stop me from drawing test results from materials science and analysing the properties of this alloy."

The reporter said, "So, what Professor Yu just said is just your own imagination, not true?"

Professor Yu said, "I have to correct your wording, what I said just now is not a conjecture, but the result of analysis through testing. Although I am not an expert in the field of weapons, please do not forget that weapons also need materials to be manufactured!"

That boundary pontiff choked for a moment.

Indeed, weapons were also made through materials, and the difference might only be between alloy materials and ordinary materials, or materials that could supposedly absorb radar waves, and so on.

Professor Yu was an authority on materials science, so it was not surprising that he came up with his result by analysing it through his expertise in materials science.

However, the reporter was still a bit undeterred and said, "In any case, Professor Yu does not have any tangible evidence to prove that what you are saying is correct, right?"

Professor Yu nodded and said, "Yes."

As a true expert, Professor Yu naturally admitted it openly and said, "As I said, this is the result of my test analysis. And I also said to add a premise – using this new alloy, plus some other technological means, please note that my analysis results are only for this new alloy, not including some other technological means I mentioned."

Professor Yu paused at this point, as if to give the journalist time to understand his words.

At this moment, Han Zhong suddenly smiled and said, "I think you may have generally understood that the other technological means that Professor Yu mentioned actually refers to some technologies in the field of weapons, so please don't key in on the words, after all, we are a press conference, not a debate, right?"

"Hahahaha"

There was a burst of laughter at the bottom, along with applause.

Those laughing were all Chinese journalists, and Professor Yu explained his statement very frankly, proving that he wasn't bragging or faking, much to the relief of those present.

And Han Zhong's witty rebuttal even dumbfounded the reporter from that sector, so how could those present not be happy?

Many people could not help but feel very happy!

The journalist had to sit down unhappily, but he did not believe that China could make such an advanced alloy.

"Next, we'll let Professor Yu continue to explain to you." Han Zhong said with a smile.

"What I'm going to talk about is pretty much the same." Professor Yu said, "The next thing I'm going to show you is the analysis and test results that I and the other experts from the Tengfei Group have done"

At this point, on the curtain behind the podium, a series of data from the tests began to be shown.

Although many people did not understand these data, the journalists present were quick to film them, and these were the basis for the report.

Moreover, if the news was false, those experts who really knew what they were doing would be able to see it.

After the presentation of the data, it was time for a free question session.

At this point, a Chinese journalist who had been given permission asked impatiently, "Mr Han, does the ownership of this new alloy belong to your group, or to the United University? If it belongs to your group, will the Tengfei Group enter the manufacturing field?"

Han Zhong smiled and said, "The alloy belongs to the Tengfei Group, however, how this new alloy can be best utilised, the Tengfei Group will certainly have a reasonable plan next, please wait and see."

There was no doubt that the press conference had been a success and would receive a great response as the news was reported.

This was evident from the reaction of the journalists present!

Campus Master Chapter 2377

The news from the press conference spread out at a rapid pace.

To the general public, this news might just be the talk of the day, after all, this so-called new alloy material is a bit far away for the public.

But for those in the industry, the news was like a heavy bomb that shook all those involved in the alloy industry.

For researchers, the emergence of this new alloy is a goal that all researchers in this field would like to study, and in fact if the research comes to fruition, it would be a huge gain.

..... Not to mention the fact that if the manufacturing process of this new alloy is really cracked, then the alloy is simply like making it yourself.

There is no telling how many people would be unable to resist this temptation alone.

However, the emergence of this new chrome alloy has caused more than just a shock.

It was the military and other industrial production and manufacturing sectors that were really shaken up, because they were in the middle of it, and naturally knew the full extent of the impact of this new alloy!

The first to bear the brunt of the shock was the Lingxia Group.

Southern Guangdong.

Inside Kato's office at the Hishita Group. At this moment, Kato's face was a little ugly, completely devoid of the calmness and vigour that he had displayed a few hours ago.

"Hoo~~~"

Looking a little anxious, Kato paced back and forth in his office, turning his head to look at the phone on his desk from time to time, but when he saw that there was no movement from the phone, he couldn't help but pace again.

"DING RING~~~"

Finally, the phone rang, and as if he had been stimulated by something, Kato immediately took a few steps over to pick up the phone, "Moshi Moshi"

"Kato-kun!"

A voice came from the other end of the phone.

Kato immediately bent down slightly and said loudly, "Terauchi Kakushita!"

The voice on the other end of the phone said, "Kato, what's going on with all this information you've passed over? Is this really what you got from China?"

Kato nodded and said, "Yes, Kakuji Terauchi, I have explained the situation before, this is the information I got from the Tengfei Group's press conference, it's totally true!"

Speaking here, Kato realized that the other party's tone seemed a bit off, so he couldn't help but ask carefully, "Kakuji Terauchi, I wonder if the results of the tests conducted by experts within the group are"

“Kato-kun!”

At this time, the other party’s voice lowered and said, “After the deduction of the experts within the group, it can basically be confirmed that all those information data you passed over from should be true.”

When Kato smiled, he was stunned, “Terauchi Kakushita, is this true?!”

“That’s right.”

The other party said, “After receiving the information you sent, the group organised experts to examine it, and the results did not find anything wrong from those data. So, if we simply look at the data, this is definitely an alloy material with top performance, and can even be said to be beyond our imagination. Even the experts within the group are all praising it!”

When Kato heard this, his entire body froze, “This is actually true?!”

This news left Kato a little confused.

How could this be possible!

He had just obtained a super alloy from the Brilliant Group, and it had been tested and proven by the experts at the Hishita Group headquarters that the alloy was absolutely genuine.

But how could it be that in the blink of an eye, the Tengfei Group had developed another new alloy?

Kato hurriedly asked, “Kakushita Terauchi, would you please help to ask the experts which is the superior alloy released by the Tengfei Group compared to the alloy we received from the Chinese before?”

“There is no need to compare.”

The other party’s reply was to make Kato stare.

Kato was stunned, “Why?”

“Because”

The other party sighed and said, “Because the group’s experts say that the two alloys are not comparable at all. The latest alloy material you sent back is far superior to the alloy we received from the Brilliant Group, and it is a comprehensive win in every aspect!”

“This”

“Kato-kun!”

The other side sighed, “Can you be sure that what you got is the real data of the other side?”

Kato had not yet recovered from the news that had shocked him, so he just nodded subconsciously, but then he reacted that the other party could not see his own nod through the phone, so he hurriedly said, “Yes, Terauchi-kun.”

“If that’s the case, then we’re in big trouble, Kato-kun!”

“.....”

Kato then couldn't help but fall silent.

Indeed, if those figures were true, it would prove that the Tengfei Group had developed a newest type of alloy, and this kind of alloy could simply throw off the kind of alloy Kato had obtained before by several streets.

No!

In the words of Terauchi Kakushita, there was no comparison between the two!

And that meant that the alloy they had bought at a considerable cost was in fact a pile of junk in their hands, and even if it was manufactured, it would still be a pile of scrap metal compared to the Tengfei Group's alloy!

But that's not the main thing, what really kills me is that if this alloy from the Tengfei Group is real, then doesn't that mean that China can build up an extremely powerful armed force at any time and crush the technology that Kepong is so proud of, whether it's the navy or the army

Kato's heart was filled with resignation, and a sense of disbelief, "This, how is this possible!"

How could a country as backward as China, a country that has never known anything but to follow and imitate copycats, possibly have so much innovation?

If this was true, then wouldn't everything he had done in China before be a waste of effort?

Kato did not want to believe this, and he was even more reluctant to believe how a piece of news, which he had not even paid much attention to, could have caused him so much trouble.

In fact, after being alerted by his subordinates, Kato could be said to have been following the news – in fact, Kato had been following the Tengfei Group since it started to rise and really came into the limelight, and he had even had the brainstorm to merge it with the Tengfei Group.

However, he was rejected by Tengfei, but Kato did not give up, because the potential of Tengfei is really great, especially the two products, the special effect current and 3D TV, Kato wants to get.

As a Kepongese who has always wanted to see his country become a world class military power again, Kato wanted to get his hands on the formula for the special effect current, but unfortunately, the security measures of the Tengfei Group were extremely strict, and no one other than the Tengfei Group knew the formula for this drug.

So Kato was helpless.

The situation with the 3D TV sets was better, but not too optimistic.

It was because the Tengfei Group was also keeping its technology a secret. Just by looking at the fact that the Tengfei Group had been talking to other companies about cooperation, but had been unable to come to an agreement, it was clear that the two sides were definitely stuck in a technical cooperation.

The problem is that the 3D technology used is too useful for the military, and it is not a question of money at all.

But Kato had been unable to get his hands on it, so he had to send someone to keep a close eye on the movements of the Tengfei Group.

Therefore, when the Tengfei Group was going to hold a press conference, Kato soon found out about it.

But when he heard that Tengfei was holding a press conference to announce a new alloy, Kato was not very interested.

Because he had just gotten a newest type of alloy, and it had also been confirmed to be extremely helpful to the Empire Most importantly, it had taken many years of development for the Brilliant Group to get to its current accumulation, which had led to the accidental development of this super alloy.

And Tengfei Group from the establishment to now only a few years, to play what alloy?

Kato did not attach importance to it in his heart.

However, out of concern for the Tengfei Group, Kato browsed through the news about the launch at the first opportunity, but the result, however, shocked him to no end.

As soon as he watched the entire video, he realised that he was in trouble!

So Kato immediately had the information and data on the event compiled and sent it to China as quickly as possible to have it tested by the Group's experts.

The results were like a bucket of cold water poured over his head, and he was drenched to the core!

It was true

"Terauchi-kun, can the Group's experts be 100% sure that the data on this alloy is real?" Kato asked, still somewhat undeterred.

"Yes, Kato-kun."

"Kakuji Terauchi, then we"

"We're really in big trouble!" The other party said, "Kato-kun, with the existence of this new alloy, the alloy technology we bought from the Brilliant Group is no longer enough to ensure our superiority in this area."

It was more than not being able to maintain an advantage, it was being left behind!

How could Kato not understand this?

He had never imagined that the Group and the Empire would be left behind by China one day, and that it would be overtaken by a Chinese group of companies!

Just a few hours ago, Kato was still gloating and proud of the acquisition he had made a few months ago.

But in the blink of an eye, the Brilliant Group had slapped him in the face with this public release of information!

Kato could not help but think of the day he met Ji Feng and He Hongwei under the office building of the Brilliant Group. At that time, he was full of confidence in the face of these two Chinese youngsters and did not even put them in his eyes.

But now

“Damn it!” Kato couldn’t help but roar in his heart.

Campus Master Chapter 2378

“Kato-kun, the next thing you need to do is to put all the work at hand aside, the immediate priority now is to find a way to get the new chrome alloy from the Tengfei Group.”

“Then the cooperation with the Brilliant Group”

“Humph!”

The other party said on the phone, “The Brilliant Group no longer has what we need in their hands, so they don’t need to put much effort into it right now. Kato-kun, the new chrome alloy in the hands of the Tengfei Group now, this is what we need the most and what the Empire needs the most, no matter what, we must find a way to get our hands on the alloy.”

“No!”

Without waiting for Kato to speak, the other man added, “Not just get the alloy, but get the process and the formula for it by all means.”

Kato said hesitantly, “Please rest assured, Your Excellency Terauchi, I will do my best, just, Your Excellency Terauchi, as you know, the hostility of China towards Kepong is really too serious, which makes us a bit passive in many things, such as the Tengfei Group’s project on 3D TV sets. Our Kepong company, Nisso Group, has also contacted it and wanted to cooperate with it, but unfortunately, the other side only responded politely, as for further contact is not at all.”

“Especially, as far as I know, the Tengfei Group has a deep background and is not friendly to our Kepong.” Kato said, “So, if we want to get this new chrome alloy technology from the Tengfei Group, I’m afraid it will be very difficult.”

“Even if it’s difficult, we still have to do it!”

Hearing Kato’s words, the other party’s voice steeped in severity as he said in a deep voice, “Kato-kun, you should know very well that the reason why the Empire is able to maintain its superiority over China now is not only because of its economic strength, but also because we have been striving for excellence in technology as well.”

“But now, a technology has emerged in China that surpasses ours, and this is absolutely unacceptable!” The other side said in a deep voice.

“..... Yes!” Kato hastily bent down.

“Kato-kun, I actually understand your concern.” At this time, the other party’s voice gentled a bit more and said, “China is not very friendly to the Empire, especially in recent times the relationship between

the two sides has been very frosty, which has caused your work to encounter certain difficulties and has caused the organization to suffer a considerable blow, but this is no reason for us not to work hard.”

Kato was busy saying, “Kato understands.”

“Well.”

The other party said, “Kato-kun, it doesn’t matter if the Chinese don’t cooperate, the point is, you have to find a way to get them to cooperate I remember that the Brilliant Group was similarly reluctant to cooperate in the past, but in the end, through your efforts, didn’t the Brilliant Group also meekly cooperate? ”

Kato was busy saying, “It’s all because the group and the organization operate brilliantly, Kato is just executing it, Terauchi-kagushita overpraise!”

“No! There is no overpraise!”

The other party said, “Kato, I believe in your ability, and I also believe that you will do a good job in this matter, because this new alloy process is really too important, this can even be said to be related to the future of the empire, so, Kato, you must do everything you can to get the alloy technology from the Tengfei Group, and if necessary, the organization and the group will fully cooperate with you! ”

Kato smiled and could not help but feel relieved in his heart, to have the full cooperation and support of the organisation, this was of course as good as it could be.

Kato was certainly very clear in his mind about the power of the organisation, so when he heard Terauchi say this, he couldn’t help but say, “Kato will definitely complete the mission and live up to the expectations of His Excellency Terauchi!”

“Well! Go for it, Kato-kun!” The other party said, “As long as you complete this mission, then you will be a credit to the Empire and the group, as well as to the organisation, which has never been stingy with rewards for meritorious service, but it will also punish you if you fail to complete the mission!”

Kato’s heart suddenly fluttered, the organisation’s punishment?

He hurriedly said, “Please don’t worry, His Excellency Terauchi, Kato will do his best!”

“That’s good.” The other party was satisfied with Kato’s response.

“Your Excellency Terauchi, may I ask if there are any other orders?” Kato asked again, as the other party spoke of the organisation’s punishment, causing Kato’s heart to tighten a little and subconsciously wanting to end the call.

However, the other party really had something else to say, “Also, while you are trying to find a way to get the new alloy process, you should also find out as much as possible who is actually responsible for the development of this new alloy Got it?”

Kato immediately understood Terauchi’s meaning, and he nodded his head hastily, saying, “Terauchi-sama, I understand. However, if something is done, my side is very understaffed, and I’m not sure if Number One will cooperate, so”

The other side said, "Don't worry, No.1 will definitely cooperate with you!"

The first time I saw you, I knew what to do."

"Very well."

.....

The press conference was a huge success and the response was so strong that it even exceeded Ji Feng's expectations.

Especially as soon as the conference was over and the reports had just come out, Ji Feng received a phone call from He Hongwei.

"Ji Feng, is this true? This is not a joke, right?"

As soon as the phone was connected, He Hongwei's voice, which was almost shouting out, came from inside: "Ji Feng, if you tell me that this is just fake news created by you to create momentum, I will fly to Jiangzhou right now and have to strangle you to death face to face!"

The He Hongwei on the phone was filled with excitement, and his voice was trembling in general as he spoke.

Even if he didn't understand the data, after seeing the video recorded at the press conference, he was surprised by Professor Yu's words.

Did the Tengfei Group really come up with a new alloy with such strong performance?

If it was true, then the significance was too great!

Therefore, after watching the video footage of the press conference, He Hongwei called Ji Feng at the first opportunity. He was both surprised and a little bit faint in his heart because he knew about the entanglement between Ji Feng and the Lingxia Group and the Brilliant Group, so he was worried whether this was a deliberate news release by Ji Feng.

Even He Hongwei was a little worried, which is why he was so eager to call Ji Feng, just to confirm the truth of the news.

Ji Feng was stunned, and then he lost his smile dumbly.

"It's true!" He gave a very affirmative answer, "What Professor Yu said are all judgments he came up with based on his professional knowledge, and the data he published are all true!"

"True?!"

He Hongwei's voice steeply increased by a few points.

Ji Feng nodded, "It's true. Brother Hongwei, I won't use this kind of fake news to create momentum for no reason, and besides, you should have gotten the test data, right? It's perfectly possible to ask a few experts to analyse it, won't the results come out?"

He Hongwei said, "Of course, of course!"

Even through the phone, Ji Feng clearly felt He Hongwei's excitement, and he couldn't help but laugh: "Brother Hongwei, there's no need to be so excited, right? This is not like you."

"You don't understand."

He Hongwei said, "Older brother, you really don't understand how I feel right now."

He Hongwei didn't continue, he only dropped a sentence, "Older brother, not much else to say, as soon as the test results come out I will go to Jiangzhou, when the time comes, I will treat you to a drink, without getting drunk!"

After saying that, He Hongwei hung up the phone.

Ji Feng was stunned, then couldn't help but shake his head and smile bitterly. He Hongwei said he didn't understand, but in fact, how could he really not understand what He Hongwei was feeling at the moment?

A shame!

Or rather, to raise his eyebrows!

This should be the most intuitive feeling of He Hongwei at this moment!

He Hongwei had been holding his anger in his chest for too long, and had been holding a fire in his heart since he had formed a grudge against Wu Zhiyong.

However, because Wu Zhiyong's status was not lower than his, and his methods were even more underhanded than his, so even though He Hongwei wanted to take out this breath of anger, he never had the opportunity to do so, so this anger He Hongwei had been holding.

As for the subsequent cooperation between the Brilliant Group and the Lingxia Group, it was also seen by He Hongwei as the will of the Wu family. In fact, the majority of people, including Ji Feng, thought so, and without the consent of the Wu family, even if Zhai Yadong, the president of the Brilliant Group, had a hundred guts, he would not have dared to cooperate with the Lingxia Group under that much pressure.

And in the process, He Hongwei, who was expected to try to prevent such cooperation, failed and not only came back in disgrace, but was also given a hard time by Shao Jie, that guy who appeared from nowhere, in Nan Yue.

At the same time, there was also Kato's contempt and shame.

Although this series of encounters does not have too much to do with the hatred between He Hongwei and Wu Zhiyong, but in fact Ji Feng knows that I am afraid that both He Hongwei and Wu Zhiyong have no intention of separating the two, in this cooperation, if it is said that the two do not have the meaning of competition, Ji Feng does not believe.

It's a pity that the final result was that He Hongwei failed miserably, and of course, Ji Feng also failed miserably.

Now, because the Tengfei Group had publicly announced that this new chrome alloy had been successfully developed, it was undoubtedly the same as saying that the so-called super alloy originally developed by the Brilliant Group was simply a pile of scrap metal!

I am afraid that only the Wu family and the Lingxia Group would treat it as a treasure, but in the eyes of others, it was just a pile of rubbish!

This feeling will definitely make He Hongwei feel very happy!

Because this anger has been held in He Hongwei's heart for too long, even though it is only a small victory, but the taste of it is a hundred times more real.

This feeling, in fact, Ji Feng knows best, because at that time he was also a loser, and even more so than the anger suffered by He Hongwei, he also wanted to prove himself one day, to really raise his eyebrows, to wipe out the shame of the past!

He also wanted to prove himself one day, to really raise his eyebrows and wipe out his shame! I think this is how He Hongwei feels now!

Campus Master Chapter 2379

In fact, Ji Feng was right in guessing that He Hongwei did have a feeling of raising his eyebrows.

As the third-generation leader of the Yanjing He family, He Hongwei had always been proud of himself, and when it came to being angry, he was the one who gave it to others, so when was it his turn to be angry?

But in reality, only those who knew him well knew how much anger He Hongwei was hiding in his heart.

And a large part of it was brought about by Wu Zhiyong.

Now, in such a high-profile manner, Ji Feng publicly announced the latest new chrome alloy successfully developed by the Tengfei Group, which was simply like pointing at Wu Zhiyong and Kato's noses and telling them, "The so-called super alloy that you are so proud of is actually nothing with me!"

At this point in time, He Hongwei already considered himself a comrade in arms with Ji Feng – in fact, they were indeed on the same side when it came to targeting Wu Zhiyong and the Lingxia Group!

Therefore, He Hongwei was proud of himself!

In fact, Ji Feng also breathed a sigh of relief and felt a sense of exaltation.

However, unlike He Hongwei, his feeling was mainly directed at the Hishita Group and the general manager of the Hishita Group in China, Kato.

It was because Hishita Group had put a lot of pressure on Ji Feng, and ever since Ji Feng had met Kato, the man who had shown a kind of disgusting arrogance from the business salon in Jiangzhou, especially the kind of contempt he had for China, for Chinese people, had made Ji Feng extraordinarily annoyed.

However, there was nothing Ji Feng could do about it.

In fact, not only in the field of science and technology, but also in the economy, which is indisputably behind Kepong.

As a representative of a large multinational conglomerate in Kepong, and as an executive of the Hishita Group, one of the pillars of Kepong's economy, Kato looked down on the Chinese people, which was really speechless, and Ji Feng could not refute it even if he was annoyed.

But the irritation in Ji Feng's heart never subsided, because this Kato, including the Sumida Group's people, and even other KAI Peng people, their contempt for Chinese people was never even half-disguised.

Ji Feng also admitted that for the time being, Kepong is indeed more developed than China, both economically and in the field of technology, China has a certain gap with Kepong, but even if you are more developed, there is no need to look at people through the door like this and put them down, right?

It is like two neighbours, one of whom is rich and powerful, while the other is poorer.

So the rich neighbour always looks superior whenever they meet, as if he is superior to the poor neighbour, as if one is an aristocrat and the other is a beggar.

I am afraid that if anyone were the poor neighbour, he would not feel well.

What's more, these two families were already feuding!

Ji Feng had this feeling!

Even if he was calm and collected, every time he saw Kato's contemptuous look, he felt the urge to smash his opponent's arrogant and contemptuous old face with a punch.

But Ji Feng restrained himself, because winning or losing in fists and kicks was nothing between the two countries' rivalry, and even, if Ji Feng did it, it might give the other party a feeling of a barbaric martial artist, which would lower the impression of the Chinese people even more.

So Ji Feng was also holding back.

And, he had endured until today!

Even when Kato was so arrogant and contemptuous of them and of China at that time in Southern Guangdong, Ji Feng was only holding back and did not refute anything too much, in order to wait for this day to come!

Since you look down on me, then I will use my own practical actions to show you that you actually don't count for anything, and in my case, what you are proud of is actually bullshit!

Now, Ji Feng has done it!

So when He Hongwei said that Ji Feng didn't understand this feeling, Ji Feng was tempted to tell him that actually everyone felt the same way.

But hearing that He Hongwei was so excited, Ji Feng didn't say anything more.

Of course, He Hongwei didn't give Ji Feng the chance to continue talking, only saying that he would personally come to Jiangzhou to invite him for a drink after the test results came out, and then hung up the phone, leaving Ji Feng to only shake his head and laugh bitterly while being excited.

A snowball of shame!

When no one was around, Ji Feng couldn't help but wave his fist a few times in excitement.

"Giggle"

At this time, a low laugh came from upstairs.

Ji Feng turned his head to look, but saw that Xiao Yuxuan was pursing her lips and laughing lightly. When she saw him looking, Xiao Yuxuan couldn't help but laugh, "Little rascal, what were you doing with your hands and feet just now?"

"Nothing, just thinking of something rather interesting." Ji Feng hemmed and hawed, the grudge with the Boundary Peng people, Ji Feng was not willing to talk much to Xiao Yuxuan, talking about it would just add to her worries.

"Interesting things?" Xiao Yuxuan's beautiful eyes glanced at him and said, "It's not thinking of any beautiful woman, is it?"

"Sweat!"

Ji Feng coughed lightly and said, "What are you thinking about ee? You're so neatly dressed, is this going out?"

Xiao Yuxuan also just teased him twice and didn't mean to look deeper, "Yeah, the press conference was so successful that as a result, the company's phone is now about to burst, I had to go to the company to check it out and make arrangements in advance."

The success of the press conference was expected, but this degree of explosion was still somewhat beyond Xiao Yuxuan's imagination, after all, she actually did not know too much about this alloy, what she had come into contact with before were electrical appliances and medicine, so although she knew that once this new chrome alloy was released, it would definitely cause a sensation, but she could not imagine that the reaction from the outside world would be so great.

In just a few hours' time, she had already received calls from many companies asking for information, not to mention what her secretary had told her, and the number of calls she had received herself.

And this is just the beginning. Once the news of the press conference has been thoroughly digested by the outside world, I'm sure the situation will be even hotter.

Even more, I'm afraid that by then it will have attracted world-class giant companies.

Because the value of this new alloy was simply too great!

Seeing this situation, Xiao Yuxuan immediately realised her previous underestimation, so now she had to make a trip to the company, on the one hand to discuss with Han Zhong about the next step of the

company's direction, on the other hand, yet she also had to first talk to the group's executives to explain what they needed to do and how to receive or deal with those who were visiting.

"Have Little Shadow follow you closely and never leave, and pay attention to safety." Ji Feng admonished.

"Don't worry, in the past when Kang Yuan slimming powder and 3D TV sets were so hot, I didn't see anyone kidnap me, now"

"It's different now!"

Ji Feng waved his hand, interrupted Xiao Yuxuan and admonished, "Yuxuan, you must not be careless now. When the previous 3D TV sets were launched, although they also attracted a lot of people's attention, there was no way to compare that with this new chrome alloy!"

To the general public, 3D TV sets are a novelty, new and fun, and can arouse their desire to consume, but this is only a commercial act, at most, there are people who see that the Tengfei Group is making money, so they are red-eyed and desperate, but that is only some vermin at most.

Further, the real value of 3D TV sets lies in the 3D illusion technology contained in them, but the greatest value of this technology is still in scientific research, although it can also be applied to the military, but the most suitable place is the command system, so some forces at home and abroad may not be so red-eyed, or even risky for this reason.

But now is different.

The significance of the new chrome alloy is simply too great. If the technology contained in the 3D television set may allow the military's chain of command to be upgraded once, then the emergence of this new chrome alloy is something that can directly change the contrast of military power in some countries.

Imagine that a weapon made from this material could conceal itself from any of the detection radars currently known in the world... I wonder how much of a shock that alone would cause!

If we were to exaggerate, this thing would be a divine weapon, indestructible and unbreakable!

And who would not be moved by such a divine weapon when faced with the various forces at home and abroad, that is, those martial arts masters?

So compared to the past, the level of danger that Xiao Yuxuan faces now will definitely be much higher.

Ji Feng admonished, "Yu Xuan, now although the Tengfei Group has greatly increased its popularity because of this launch, it is also standing on the cusp of the storm because of it, so be careful!"

Xiao Yuxuan had already arrived in front of Ji Feng, looking at Ji Feng's serious admonition, she could not help but smile gently, "Are you worried?"

Ji Feng said, "What do you think?"

Xiao Yuxuan pursed her lips and said, "I know you will protect me, right, little rascal?"

Ji Feng: "....."

This goblin!

Ji Feng secretly said in his heart, the two of them have been together for so long, but every time Xiao Yuxuan just smiled seductively, a kind of flirtatious style from her bones suddenly came out, making any normal man's heart flutter and his heart burn.

"Don't worry, Little Shadow will protect me, besides, there's still you!" Xiao Yuxuan tenderly pecked on Ji Feng's lips and said, "With you around, no one will be able to hurt me, right?"

Ji Feng was tempted to say, "I am not omnipotent, I may not be able to stop someone from attacking secretly, but he didn't say this, he just nodded and said, "Then you'd better be careful."

Xiao Yuxuan said, "I remember. Little rascal"

With that, she giggled, and then carried the document bag in a modest manner, while Xiao Ying followed not far behind with her pursed lips and snickered.

Ji Feng couldn't help but hate, "Goblin! I'll definitely put you in your place when you come back tonight!"

Campus Master Chapter 2380

Xiao Yuxuan was right in predicting that the fallout from the press conference was still spreading, and in fact, with the news reports going out, the sensational effect caused by the conference was only just beginning.

For example, at this moment, somewhere in Northwest China, in North Shaanxi Province, Wu Zhiyong could not help but be stunned in his office after hearing the news, holding the phone for a while without speaking, he needed time to digest the news, really because, the news was too shocking.

"This, this is true?" He waited until Wu Zhiyong came back to his senses, he still had a feeling of disbelief and couldn't help but confirm it again into the phone.

"Young Wu, it's true."

A voice came from the other end of the phone and said, "This is a special release from the Tengfei Group and United University"

This person quickly told the source of the news before adding, "After getting the data, the second master immediately organized his manpower to carry out tests and even sent one of the copies to Yanjing University, and from the results that have come out so far, things should be true."

Surprisingly, it was true

Wu Zhiyong had an infinite disappointment in his heart, and an indescribable resignation – how could it be the Tengfei Group again! It was Ji Feng again!

There was no doubt that since this was released by the Tengfei Group, this matter was definitely unrelated to Ji Feng.

This is probably another technology that Ji Feng got from somewhere, just like the so-called so-and-so diet pills before, and the broken TV set, and the special effects current, etc. It's probably all the same.

Perhaps, this time it was really developed by experts from the United University, but Ji Feng just intervened in it Wu Zhiyong did not want to believe in his heart that the Tengfei Group would do such a great job in just a few years, so he thought that this alloy technology should be developed by expert professors from the United University.

Although he knew that this was probably the case, Wu Zhiyong just had an indescribable discomfort in his heart, how could such an advanced technology have been obtained by Ji Feng!

Wu Zhiyong really can't hear anything from Ji Feng, and I don't know what's going on, since the two have exchanged words these few times, especially this recent period of time, the Yanjing side to now third uncle Wu Zhengxin is still being held in detention, the whole family is a bit anxious by this matter.

At this time, I don't know how many people are secretly talking about it, praising Ji Feng's greatness, and I even heard that even some of the old generation are praising Ji Feng, the current Ji Feng is really famous in Yanjing.

Then, in contrast, naturally, Wu Zhiyong, a miserable figure who has lost several times in a row at the hands of Ji Feng, amidst the lavish praise for Ji Feng, mentioning the encounter between Ji Feng and him, many people would subconsciously shake their heads.

..... Wu Zhiyong knew that it was in praise of Ji Feng, while lamenting him, or a kind of pity, or even disdain.

What annoys Wu Zhiyong most is that when people mentioned him in Yanjing in the past, they would often mention him along with He Hongwei, Ji Shaodong and others, but now, people will only mention him when they mention Ji Feng.

It seemed as if he had become a complete antipodean!

This made it simply unbearable for Wu Zhiyong!

That was why he was now also the one who could not hear the news about Ji Feng the most, and even more so, he could not see Ji Feng doing anything, because the more outstanding Ji Feng did, the more it mirrored his incompetence.

But on the contrary, Ji Feng was now making achievements.

This made Wu Zhiyong couldn't help but feel a sense of powerlessness, but more than that, he was still annoyed, couldn't this son of a bitch stop for a while?

Wu Zhiyong could even imagine that when the news spread, there was no telling how many people would praise Ji Feng, and at this time, I was afraid that there would be even more contempt for him.

But soon, Wu Zhiyong couldn't help but have another headache, if this alloy was really so excellent, then what had become of the alloy that the Lingxia Group had bought from the Brilliant Group?

"I'm going back to Yanjing."

Wu Zhiyong couldn't sit still a bit, he had to go back before it was too late, although he was extraordinarily annoyed in his heart and had lost several times to Ji Feng, but that didn't mean that he

was not capable and insightful, it turned out that the failure wasn't that he couldn't do it, it was that Ji Feng was too strong.

When Wu Zhiyong hoofed it and arrived home in Yanjing a few hours later, the atmosphere in the Wu family was also somewhat depressed.

"It's Ji Feng again!"

Wu Zhengxiang couldn't help but sigh when he even mentioned Ji Feng, this little brat of the Ji family was just too much of a tosser, yet he left them helpless, had he really become their nemesis just as the outside world had said?

But Wu Zhengmin said in a deep voice: "The data released by the Tengfei Group has been confirmed to be true."

At the end of the sentence, even Wu Zhengmin's tone had a hint of reluctance.

Several people could not help but be silent.

Everyone understood the meaning of Wu Zhengmin's words, the data had been confirmed to be true, which meant that the Brilliant Group would definitely have to rise again, and this time it would be a strong rise, and I was afraid that nothing would be able to suppress them.

Besides, with the Ji family around, they wouldn't have been able to suppress the Tengfei Group, which made it even more depressing.

"It seems that the last time Ji Feng and He Hongwei fell in Southern Guangdong, but instead, it made them more and more brave!" Wu Zhengxiang said, "The rise of the Tengfei Group can't be stopped, I'm afraid, next Ji Feng will definitely take this opportunity to find a way to suppress the Brilliant Group, Zhiyong's previous arrangement didn't do much good."

Speaking of this, Wu Zhiyong's heart was bored.

Originally, there was his authorization to make Ji Feng and He Hongwei suffer humiliation in Southern Guangdong, and originally, Wu Zhiyong was still confident that this could teach Ji Feng and He Hongwei a lesson.

But now it looked like it was a joke.

Wu Zhiyong's seemingly smug tactics didn't seem to be in the eyes of Ji Feng and He Hongwei at all; they simply don't fight with you for a moment of intent, but beat you directly from where you are most proud.

—You are not self-congratulatory in thinking that the brilliant group's super alloy technology is outstanding, and you also said something about it being just a business act and not needing others to interfere, and you even humiliated Ji Feng and He Hongwei.

But what was the result?

Since you are so proud of your alloy, simply let your alloy become a pile of rubbish!

..... This was not a small blow to Wu Zhiyong.

“This kid from the Ji family”

Wu Zhiyong was depressed, Wu Zhengxiang was likewise not relaxed, mentioning Ji Feng he could not help but hate: “This kid has really become our family’s nemesis!”

But no!

First it was Wu Zhicheng, who almost indirectly died at the hands of Ji Feng, then it was Rong Peng of the Brilliant Group who was turned against him, and Rong Suyan, father and daughter, who broke up with the Wu family and are still living in Jiangzhou, and I am afraid they have already worn the same trousers as Ji Feng.

Then there was the Zheng family, the Wang family, and Wu Zhicheng, and next was Wu Zhengxin who all fell into the hands of Ji Feng, and the fall was so tragic!

The company’s main goal is to provide the best possible service to its customers.

“Once Tengfei Group rises, if this momentum continues, if Tengfei Group wants to snipe at Brilliant Group, it will really be a bit troublesome.” Finally, Wu Zhengxiang said sullenly, thinking of that serious consequence, he couldn’t help but grit his teeth.

“We can’t go on like this!” Wu Zhiyong gritted his teeth and said.

“That’s right, it can’t go on like this.” Wu Zhengxiang said, “But Zhiyong, sometimes you can’t just do things on impulse, in the past you took Ji Feng too lightly, that’s why you lost again and again, now if you want to do anything again, you have to think it through!”

Wu Zhiyong’s face instantly rose red: “..... Second uncle said yes, I remember.”

There was no doubt that Wu Zhengxiang was expressing his displeasure with Wu Zhiyong, and he was doing so openly in front of his elder brother Wu Zhengmin.

It was evident that Wu Zhengxiang already had a strong opinion of Wu Zhiyong’s performance.

I believe that if Wu Zhengmin wasn’t here today, I’m afraid that Wu Zhengxiang would have bluntly criticised Wu Zhiyong severely!

“Your second uncle is right!” At this moment, Wu Zhengmin spoke up, “However, we can’t do nothing now, the Brilliant Group can’t be in chaos, so we must pay close attention to the movements of the Tengfei Group next, and we must also think of a prudent solution.”

“I have an idea.” Wu Zhiyong suddenly said.

“Hmm?” Both Wu Zhengmin and Wu Zhengxiang looked at him, “Tell me, what’s the idea?”

“I think that since the Tengfei Group boasts about their alloys so much, especially in the use of weapons, so much, then can’t this resource be classified as a strategic resource and be controlled in some way?” Wu Zhiyong proposed.

“Oh?”

Wu Zhengxiang could not help but be stunned, and after a brief moment of contemplation, he could not help but say with a straight face, "Big brother, this suggestion of Zhiyong's seems feasible!"

An embarrassed look then flashed across Wu Zhiyong's face, his heart more or less uncomfortable.

Originally, his own proposal, second uncle basically will not say anything, but now, obviously this proposal is very good, but second uncle only said 'seems' feasible

Wu Zhiyong suddenly felt a sense of crisis.

And at this time, Wu Zhengmin was nodding thoughtfully and said, "That's a solution Zhiyong, leave this matter to you, find a way to do the best you can, remember?"

Wu Zhiyong hurriedly nodded, "Father, I remember."

He however knew that this was his father defending himself and, at the same time, giving himself a chance to prove himself.

Of course, he was even more clear that since his father had nodded his head in agreement, it meant that this solution was feasible, which was why his father had given this matter to himself to handle under such circumstances.

"I will grasp it! I will not let anyone covet my position!" Wu Zhiyong secretly clenched his fist and was fierce in his heart, "Ji Feng, I've fallen to such a state because you forced me to"
