

## Chapter 1081

Zhang Fan and several directors walked through the passage and walked through the two lines of doctors.

At this time, Zhang Fan also played his mind and said nice words. These are human spirits. They can't underestimate them. Don't look at the scenes of boasting each other, but you can catch a glimpse of the leopard. You can't take it lightly when dealing with these people.

These people are floating and heavy. They have rolled three times in the elite group. If you show a little weakness, they can release corresponding big moves accordingly. Some people don't realize one or two of the principles of life until they die, and some people understand them since childhood. Zhang Fan may not be a genius, but he is definitely a man with a heart.

Since he was a child, he has learned a truth that small benefits turn into big favor.

In those days, there was a big wolf dog in grandma Zhang Fan's family. According to Zhang Fan's uncle's boasting, he said he got a retired wolf dog from the army. He felt very powerful when he was a child. Later, he understood that his uncle boasted.

However, boasting belongs to boasting. The big wolf dog is really fierce. Its thick iron chain tied around its neck can not give people a sense of security. When standing up, it is almost as tall as an adult male.

The whole family, except the strong uncle, dozens of people dare not tease the wolf dog. But there were also a bunch of little wolf dogs in the wolf kennel. Zhang Fan was itchy at that time. He begged his uncle. He was not a grandmother, so he wouldn't be used to children.

What should I do? Zhang Fan was never a person who bowed his head to admit defeat. He was also an indomitable pimp. The steamed steamed steamed buns with white flour and big meat stuffing made people drool.

Zhang Fan secretly took the steamed stuffed bun and fed it little by little in front of the big wolf dog. Three meat buns go down, big wolf dog and Zhang fan are like sisters! Zhang Fan, a little wolf dog, ran all over the yard.

Grandma was almost scared to death at that time, but when Uncle knew about it, he not only wasn't angry, but also said to Zhang Fan's mother, "little stone is a character!"

Since when did Zhang Fan realize a truth that small benefits buy people's hearts. In fact, when the old saying is finished, you must give it first if you want to take it. If you want these people to spread their names and make your throwing knife more stable in the future, you must first let these people taste the sweetness.

The Health Bureau didn't come down to find other people's problems.

"A big city is a big city. The orthopedics department in Jinhe is the most distinctive department I have ever seen. There are three-level triage and connection up and down. There are really many places where we need other hospitals to study here. I just paid special attention. The attending doctors and even residents know the situation of patients like the back of their hands. The level of directors is very high!"

Zhang Fan speaks insincerely. In fact, this is society, this is the workplace.

The directors are the same, "the physical examination of Zhang hospital is really powerful, meticulous and rigorous. I counted it and let the patients turn over no more than twice. The system that can be checked is not more detailed than us.

There are no empty people under the high reputation. It was the strength of Zhang hospital that made the special orthopedic hospital return! "

One is for throwing knives, and the other is for technology. Everyone is happy.

At this time, the sea breeze in autumn and the sea breeze in the morning blew. The window on the side of the corridor was blown open, and the wind blew through, making everyone's white coats ring. Everyone turned their heads to the window.

Although there is a bay the size of a bathhouse next to the Jin River, it is also a sea. Although there are no hurricanes, the wind is still a bit strong. The two female doctors of hand and foot surgery stood not far in front of the window.

The female doctor with a little pouch and a little dark circles, like a frightened Mustang, turned and ran towards the window at the first time. Another female doctor beside her was surprised, "is this less dressed? She went to close the window? "

If female doctors are in internal medicine, they are used as men. If they are in surgery, although the ceiling of the workplace is slightly lower, they generally live better than ordinary male doctors. After all, a little red in the green leaves is still held by male doctors. Therefore, although they are graduate students, they can't turn to female doctors to close the windows against the wind!

In fact, the female doctor who closed the window was Zhang Fan's classmate.

Zhang Fan's name is too common. Although Zhang's surname is not the largest surname in China, it is estimated that it is more than the total population of Marubeni. Therefore, when it is said that the expert is Zhang Fan, his classmate can't move. The expert and classmate can't contact each other, and it is estimated that there is no shadow of Zhang Fan in her heart.

Moreover, although Zhang Fan and Yang Ma have been on the news several times, the medical circle pays attention to highlighting group contributions in 10 years. For example, when Zhang Fan and Yang Ma go to Dubai, Yang Ma talks about a team dominated by frontier doctors in China.

This style is good or bad. If it is good, it is conducive to unity and highlighting the leaders who have not participated in the action. I don't know. It's a little for the outstanding personnel in the operation

Later, when an old lady turned white hair and bent her body, and decades of good years were lost, the country began to change when it was discovered abroad. For example, the later final team, Hu team and Li team. Perhaps from this moment, we slowly feel that scientific research may need some special talents to take over.

Therefore, Zhang Fan is now famous among some top scholars, but he is still unknown in the general medical circle.

But when the directors came out around Zhang Fan, his classmate was like an electric shock. I almost trembled. From the soles of her feet to her head, she trembled. Really, she didn't know what she was thinking. Just one word, escape!

What's the feeling of electric shock? Zhang Fan tasted it in those years. There was a naked switch in their factory. In his first grade of primary school, he felt that this strange thing could be exposed. In fact, Zhang Fan was naughty and difficult. Therefore, can the exposed East and West bear it? No, he took out a bird and peed at the switch.

Then, Zhang Fan went home with his legs clamped and wearing pants with urine in his crotch! I was really lucky.

.....

The breeze blew, and the early morning sun shone in with the wind from the window. The female students were not curious about how Zhang Fan became an expert, nor did they care how awesome Zhang Fan is now, nor did they have the heart to meet each other, because she didn't want to see each other or meet each other all her life.

Looking at Zhang Fan's smiling face facing the directors, her heart was like a knife.

It's not how much harm Zhang Fan caused to her, but she met Zhang Fan in her most difficult and difficult days. Zhang Fan actually represents the life she couldn't face in the past.

Some people regard suffering as an experience, or as a valuable experience in life. For example, Zhang Fan, although he studied in school in general, he was still famous because his classmates would think of the trafficker Zhang when they studied by themselves at night and their hungry front heart stuck to their back.

In the wind and rain, in the dormitory building without elevator, Zhang Fanman with sweat on his face sold this instant noodles and ham sausage at school. In this way, he can still have a cheap smile on his face.

Zhang Fan has never covered up his job as a peddler. When he bragged with Shaohua, Zhang Fan is still very proud.

But this female classmate is different. In those years, she was also poor and wore clothes that were always simple to the extreme. She worked on a work study program in the student union. In order not to be looked down upon by others, always take a pair of indifference that strangers are not allowed to enter.

She uses this indifference as a defense, not to let others close, nor to let others hurt. It is not uncommon for one or two extremely poor students to come out of a place where the world is suffering. This kind of self-esteem may not be realized by ordinary urban students.

Female students are self-improvement and vain. Who is not vain at the same age.

But she didn't die. She was so cold. The same poor and naked Zhang Fan, with a cheap smile on her face, wanted to communicate with her. Then she said a word that let her make the other party remember hard: do you have money to open a house?

At that time, looking at Zhang Fan who fled like a dog, she somehow had a cruel pleasure in her heart.

Later, the female classmate returned to her hometown after graduating from college. She took the postgraduate entrance examination while working. She won't close her eyes if she doesn't jump out of the gully. After being admitted as a graduate student, my feelings also developed, and I got a marriage certificate with a college classmate who had fairly good family conditions.

Although the man's family has a small family background, it is still difficult to buy a house in the capital. They will certainly live well in small cities, but she is unwilling, so they fight together. Female students get up early in the morning. In fact, it's not that they don't have time to make up, but that they don't have a morning meeting on weekends. It doesn't matter whether they make up or not. It's better to save a little.

As a result, she met someone she didn't want to see in her life, and the other party became an expert. She hasn't made up yet! In fact, even with makeup, she doesn't want Zhang Fan to recognize it. Because she didn't want others to know that she was very difficult and down as a transparent person.

So when she saw Zhang Fan, she was terrified. Compare heart to heart. Will the cruel pleasure be returned by the other party?

Closing the window was like slow motion. She expected everyone to turn around.

But at this time, the director of hand and foot surgery said, "Zhang Yuan, I heard that you also graduated from LAN city. So is my student Xiao Li, who is very diligent and progressive. Hey, LAN city produces talents. Xiao Li, come here quickly!"

Dr. Li, who closes the window, has numb scalp.

But my boss and my mentor spoke. Can you not turn around?

Turning around, she smiled more ugly than she cried.

The biting smile was really a biting smile. She felt that she would be cruelly ridiculed next.

He smiled, just like he did in those years. He smiled so cheap. Why did you laugh? Did you laugh that I had no eyes? Laugh, I'm not as good as you now?

"Ha, I haven't seen you for a long time. You're in Jinhe, too!" After that, Zhang Fan saw that the other party seemed to be in a wrong state and didn't say much. After all, he was crazy. But after all, I'm still an old classmate.

Turning to the director of hand and foot surgery, he said, "director Wang, it's not easy for US Northwest students to come out. Take care of more if you can, please!"

Everyone has eyes. Although there is no change in Zhang Fan's face, he still smiles so brightly, but the girl student's face is so desperate.

Therefore, the people who were supposed to come up to speak also hummed and hawed in embarrassment. In particular, director Wang of hand and foot surgery smiled awkwardly, and then looked at Zhang Fan and his female students with a look I knew.

"Well!" Zhang Fan's head is sweating. It's not what you think! I'll go. Zhang fan can't explain.

It's really lonely like snow!

The female classmate watched a group of people go away, and she looked at it blankly.

She really has a feeling in her heart. You see, I'm kind of like before!

**Chapter 1082**

Zhang Fannv stared at the distant crowd. I don't know what it's like. She was ready to accept the ridicule of the other party, but the other party still smiled as cheap as before. The cheap made her sad, sour and uncomfortable.

A woman like her, if you sneer at her, she will never fall down. Maybe she can work out a different future with a breath. But when Zhang Fan faced her with an ordinary mentality, she felt uncomfortable, indifferent and wronged.

"You? It can't be true? He is an expert who makes our boss smile and flatter! Are you really classmates? Really... "

Looking at the iron blue on the face of her colleague, the gossip woman doctor turned her little surprise and jealousy into nothing and into a kind of pity.

"Well, don't look at it. People have gone far and missed it. After all, you've had a bad time before. You had a good eye in those years. But now, it's good! "

Not to mention Zhang Fan's female classmate, but Zhang Fan's female classmate's master's classmate is going crazy by the fire of gossip.

Men and women are different. Let alone other places, the curiosity about love is particularly obvious. For example, a girl in a group of girls talked to someone. Everyone asked curiously: what is he doing? How tall, handsome or not? Is there money at home.

There are many problems.

But boys are different. They are very rough and direct. Just one sentence: did you sleep?

On Zhang Fan's side, a group of people just briefly used a meaning I understand. After reading Zhang Fan, they didn't even say anything superfluous and didn't ask a question, as if this was, of course, the past.

In fact, Zhang Fan was the same. He didn't go to his heart. There was no ripple at all. What hatred and hatred are all bullshit. Even what Zhang Fan said about him in those years is very interesting and memorable. After all, it's not a young and frivolous youth.

The female students feel that Zhang Fan is here to show off.

.....

Director Yang wanted to shoot secretly. Don't disturb him. Unfortunately, it has become an integral part of the orthopedics department of Jinhe affiliated hospital. There's no way to refuse this. Even if you don't want to, you can't refuse others to help the Throwing Knife experts.

Because Throwing Knife experts come with technology.

.....

The human body is a very wonderful tissue, which is even more wonderful in the event of disease. For example, when the right heart is uncomfortable, it is not the heart but the digestive system that is often the first to suffer. The patient who first fell ill did not understand and went to the digestive department. As a result, he was sent to the cardiology department.

The old patients, once they feel sick recently and don't want to, go directly to the cardiology department.

Orthopedics is actually the same. Many people feel uncomfortable with their neck and waist. They think there is something wrong with their cervical spine and lumbar spine. In fact, if there is a problem with the spine, the outbreak point is often not on the spine.

There is a saying in medical treatment that the disease is on the waist and the pain is on the leg. The pain is on the arm and the disease is on the cervical spine.

Also, for example, many people have tennis elbows, and then find a two knife masseur to put the elbow joint like a halogen elbow, apply hot compress for a while, apply cold compress for a while, and then fumigate with herbal medicine. Finally, in order to make it taste, all kinds of eye-catching.

It's hard to say whether the effect is good or not. Anyway, it feels like it hurts in another place.

In fact, this is nonsense. The problem with tennis elbow is not in the elbow, but in the wrist. As long as you brake the wrist, you can do it in a few days. You really don't have to use your elbow.

Elbow joint, halogen also halogen, the big deal is to suffer some crime, but the cervical spine and lumbar spine must not be careless.

For example, the neck feels like a pillow. It's not a bone problem. It's a muscle strain near your cervical spine. Massage is a massage. Don't set the bone. There is a problem with your cervical spine. First of all, your hands are numb like touching the switch. How can you find fat technology all over the world to push oil for you.

In fact, the lumbar spine is the same. Low back pain is often not a matter of bones, but only the muscle strain near the lumbar spine.

.....

When Zhang Fan came to Jinhe this time, the patients he met were wonderful.

Southerners or young people don't know what a bathhouse is now. Now it's either a bathhouse or a sauna made by a club. The facilities are complete. There are many beautiful girls in it.

In the city of Jinhe, as well as the capital not far away, many old people like the habit of a bathhouse.

It's actually a public bathroom. A group of Lords are soaking naked in the flood pool, just like white and tender dumplings. Because they are old and their skin is horny, many old men take a rough stone and start rubbing it on their body when it softens.

To tell the truth, this kind of stone is rough when sharpening a knife, but they love it.

Lao Li, a native of Laojin River, has separated his children when they are old. On weekdays, if you have nothing to do, take a bath in the old bathroom. Because of the development of the city, there are fewer and fewer such bathrooms, so the old guys go early to grab the position and grab the cabinet for clothes, otherwise there will be no place.

The old man had a slight cold and dizziness that day, so he thought it would be better to go to the bathhouse and bubble. Unexpectedly, the hot air in the bathhouse made his dizziness more serious. He stood up and didn't want to soak. As a result, the sole of his foot slipped and the back waist pole fell on the edge of the pool.

The white body, like the meat sliver falling from the meat case, fell to the ground smoothly.

Lao Li, ouch! After lying on the ground, he felt finished. The lower half of the body is like electricity. It's not only numb, but also like the tendons in the body have been pulled out. The dick who hasn't felt for many years is burning like being put into a fire.

Other naked old men laughed when they saw that Lao Li fell down, "Lao Li, what's the matter? Has Mei opened twice? Or what? We are all old men ~! "

Because they found Lao Li's penis a little excited, they thought Lao Li wanted to

But when everyone smiled, they found that it was wrong. Lao Li's face was painful, but he was a little incontinent, because the yellow liquid from his lower body began to come out along the water flow.

From this point of view, everyone thinks it's wrong.

"Come on. Give me a hand, Lao Li has a brain block! You don't say anything. Your face is crooked and your mouth is crooked. Hurry to the hospital. "

First aid, especially on-site first aid, is most afraid of two knives.

It is often a good intention to do bad things. If you don't understand, the best way to help the injured is to hit 120 instead of specious moves.

These old men have experienced something. It is estimated that some of their relatives and friends have suffered from diseases such as cerebral infarction. Therefore, when they see Lao Li, they think it is cerebral infarction.

In fact, Lao Li's face is not crooked, it hurts.

A group of naked old men wrapped themselves in big towels, raised Lao Li with all hands and feet, and sent him out.

Really, the bathroom owner was scared silly. There was no one in and out of the women's bathroom. Otherwise, everyone thought a group of old men were playing hooligans.

Lao Li was already speechless because of the pain. As a result, when he was carried by everyone, the pain changed.

Needless to say, this lift caused secondary damage.

The handling method of spinal injury is very particular. Not a few people shout one, two or three, just like catching a pig.

For example, if you want a hard board, you can't use a soft stretcher. It must be a hard board, such as a door panel.

Moreover, the patient is not lifted casually from the injured place to the hard board, nor is it lifted by grasping his legs and feet. It must be rolled or translated.

Because spinal injury is actually a kind of bone injury.

The three elements of bone injury are bone friction, abnormal movement and deformation.

What does the spine do? Is it the girder of the human body or the shell that protects the spinal cord?

When the spine is damaged, the spinal cord will be damaged. At this time, once improper handling, it will definitely cause secondary damage.

Maybe it was just a simple contusion, but the patient's spinal cord was severely injured due to uncomfortable movement. This is a bad thing done with good intentions.

A group of naked old men sent Lao Li to 120. The old men were still boasting that "as soon as I looked, I knew Lao Li had a stroke. What I was most afraid of in the bathhouse was a cold wind. As soon as the cold wind blew, guess what, he had a stroke."

After the family members arrived at the hospital, they heard that there were two injuries. While letting the old man be hospitalized, the family members first sued the bathhouse and a group of enthusiastic uncles.

.....

On the side of Jinhe, he was not sure about this kind of operation, so director Yang of the first Department of spinal surgery thought and invited Zhang Fan to Jinhe.

### **Chapter 1083**

In the operating room, not only the directors came, but even the hospital newspaper of Jinhe affiliated hospital came. They negotiated with Zhang Fan and wanted to make this operation the first independent operation in the hospital. Zhang Fan agreed without thinking about it. Therefore, the hospital reported that director Yang and director Liang were going to be the main knives of the operation.

Good face. People say that men have good face. In fact, not only men have good face, but also women and even units. Especially in the cities near the capital, it's hard to justify bad face.

This kind of thing exists in many hospitals. For example, what level should a hospital evaluate, but it will have shortcomings for a while and a half. Shortcomings are important operations. They will contact doctor Feidao to come over, complete the operation and hang their names.

In fact, this is a good thing, because once it is reported that they will do this operation, the doctor will definitely work hard to learn this operation in the shortest time, otherwise there is no way to explain.

For this kind of thing, Zhang fan understands very well. Who wants them to be in the capital circle? A

pool can press all orthopedics around 500 kilometers. Often, many orthopedic hospitals around the capital can't develop anything, so a trauma orthopedic department has emerged.

Because of a slightly more serious disease, the patient's family took the patient to the capital. Who hasn't had three relatives and six relatives in the capital.

In the operating room, when Zhang Fan entered the operating room, he always looked at the patient's MRI and CT results. It's not a moment to sharpen the gun. It's to build the most perfect surgical path in the system. Surgery, medical treatment, it seems that the regulations are very dead.

From the incision to the resection length, experts can accurately determine the treatment scheme of many diseases to mm, but this is just a direction for doctors who are new to the industry. To Zhang Fan's degree, the operation changes a lot in his hands.

Because people are changing and diseases are changing, after all, textbooks are the most classic medical records.

For example, Zhang fan can't operate on this patient according to the textbook.

Because the old man is old, the lumbar degenerative disease is serious. Many people may know the term, degenerative lesions.

In fact, this word is most used in orthopedics. The knee joint is a little uncomfortable. Go to the doctor. The doctor looked at it. Oh, there's nothing serious. It's degenerative disease. His wife began to dislike him. Go to see a doctor. Oh, you are not kidney deficiency, but lumbar degenerative disease.

Many people wonder what is degenerative disease. Generally speaking, the joints are aging. Many people wonder, I'm only in my thirties, and the parts are aging?

Human activities are actually joint activities. Even if you swear, it is the activity of temporomandibular joint that drives the vocal tract pronunciation.

Joints, however, are often made up of two unconnected bones that move around each other to produce torque. The interaction between bone and bone must be strong, which will lead to wear and tear. In order to make people move longer, the body often secretes lubricating fluid in the joints, and various soft tissues are supported between two hard bones like gaskets. In order to avoid wear, the hard bones have a coat, which is the so-called cartilage.

It's complicated to say. In fact, in popular terms, it's easy to understand the cow nest bone that many people like to eat.

Holding a braised cow's nest bone in both hands, it is sticky and powerful like a cow's hoof tendon. This is the ligament around the cow's knee joint, which is used to fix the upper and lower bones and prevent the bones from running around. Just like many women use the practice belt to bind the sagging lower abdomen, the one with the practice belt may not be a Xiaoke, perhaps a blessed woman.

After biting the ligament and entering the joint, the best thing to eat is a circle of fat meat, but it is not fat meat. It tastes waxy but not greasy. This is actually the inner capsule of the joint, that is, the gasket between bones. Finally, pick up the rest of the bones to suck. People with good teeth have to bite the white and blue cartilage.

These three tissues constitute the wear-resistant layer of bone and joint. Degenerative lesions, in the early years, were often diseases that would have come early to heavy manual workers. When people were middle-aged men, they obviously had no disease, but they felt sore all over and stiff limbs when lying in bed.

Nowadays, most of the degenerative lesions are fat. Whether it's the lumbar spine or the knee, most patients are overweight patients. The long-term overload weight makes the joints start to mutate.

First, the ligaments begin to relax, and then the internal capsule between the bones is directly crushed to death, resulting in failure to secrete lubricating fluid. If there is no intervention at this time, that is, the so-called weight loss, and then the wear between the bones.

In cartilage, there are not only bone, blood vessels, but also nerves. Wear at this time will lead to pain. Many people boil and boil with painkillers. I don't listen to the doctor. I always say that according to the doctor's words, it's boring to live. I don't want to eat meat and smoke.

Soft bone, soft bone. It sounds like a curse. In fact, this soft bone is very important in the human body. Moreover, this thing is a disposable product. After wear, it can't be regenerated.

When the cartilage is polished, after a few years, suddenly the joint doesn't hurt. The patient was also happy that the doctor was a mallet. As a result, before long, the legs began to deform. At this time, the cartilage was gone, that is, the friction between hard bones. The lighter one is like Lao pan holding up his hands, circling his legs and walking like a duck.

The heavier direct is like a car with a crooked girder. It looks like everyone has changed.

Now is not the age of fat as beauty, not to say that fat is not good-looking. Overweight body will bring many unpredictable diseases.

Therefore, when the name appears on your body, please eat some glucosamine capsules on the premise

of weight loss. Of course, don't eat tens of thousands of health products from Polai. Just eat some OTC. Although this drug can not be treated, it can delay the time of cartilage wear.

On imaging, degenerative disc lesions occurred at the age of 30. Therefore, when you enter the age of 30, don't show off, don't bend down in front of girls from time to time, and don't feel like you're swinging.

As an old Chinese saying goes, don't look at your joy now, be careful to pull the list later.

The old man Zhang Fan is now facing is very troublesome. Because the old man's spinal joints are particularly disordered. If the spine of a normal person or a young person is like a neat line made by a particularly excellent wiring engineer, the old man's spine is a line made by a drunken two knife wiring engineer. In addition, it has been kicked by a few passing children, which has become more chaotic.

Therefore, the difficulty of this operation is not to repair the injury, but to find a point. Look for a focus that can not only repair the old man's nerves, but also find an old man who has adapted to continue his normal life.

Just like the plain life, when you have it, you don't feel precious at all. You think about how to be vigorous and gallop every day, but once you lose it, you know the plain precious.

Some people boast that they can lie in bed until they die. If they eat, drink and Lazar are served, they feel that this life is particularly beautiful, but once they can't get up in bed, they can't shed tears of regret. If you see your wife dancing with other old men, it's really hard to die.

"Zhang Yuan, after repairing the nerve, do you put a steel rod to fix it, or allogeneic bone?" Director Yang saw Zhang Fan staring at the patient's examination results, so he came over and asked Zhang Fan.

For this degree of operation, the preoperative discussion is a general direction, and several instruments will be prepared before the operation to prevent unprepared after incision.

"No, the waist is three or four fused and cannot be fixed. His torque has changed. After inserting allogeneic fixtures, he may not be able to support his whole upper body. Only by modifying the original bone to adjust the torque."

"Well, that's what I think!" Lao Yang looked at Zhang Fan, looked at the inspection results put on the film viewing lamp, and said to Zhang Fan quite definitely.

"Ha ha!" Zhang Fan smiled and nodded.

In fact, where does Lao Yang think so? He thinks Zhang Fan wants to put a steel rod. I'm going to ask how Zhang Fanfang is.

This is the difference between Throwing Knife experts and non Throwing Knife experts. One is more

flexible in the application of technology, while the other is still trapped in routine surgery.

Director Liang and director Yang have little difference in their level. Therefore, in this kind of injury surgery for elderly patients, it is very uncertain.

This is also one of the reasons why Zhang Fan was quite respected when he flew his knife to Jinhe.

The operation began.

After Zhang Fan picked up the scalpel, he became different. No flattery, no humility, say one is one.

"There's bleeding here. Give me the electric knife!" Lao Yang is a helper. A small artery appears on his side, showing blood flowers. He reaches out to the instrument nurse.

As a result, before the nurse spoke, Zhang Fan spoke first: "no electric knife, silk thread ligation!"

Lao Yang was about to pick up the silk thread. As a result, Zhang Fan had begun ligation.

It can be said that Zhang Fan will never let several assistants start with the slightly key steps from the beginning of the operation.

Not to worry about them, this is a general rule of doctor Throwing Knife.

This is also the reason why general flying knife doctors can't do several operations a day, while flying knife doctors can do more than a dozen operations a day in their own hospital.

In his own hospital, although he signed all the operations, he may not have done them. Even if he encounters more complex operations, he often starts at the most critical steps. After completing the key steps, he gives the operation to others.

Many people rush to big hospitals to find big experts. Surgery may not be done by big experts themselves. This is an unspoken rule in the industry.

The throwing knife is different.

Just like Zhang Fan, the moment he picked up the scalpel began. He was absorbed, more focused than in the tea vegetable hospital. Almost several other directors were the existence of the spreader.

## **Chapter 1084**

On the morning of the weekend, before 8 o'clock, the passage of the operating room in the Affiliated Hospital of Jinhe was crowded with family members. On weekends in the hospital, only the doctors on

duty are left in the outpatient and routine examination departments. Therefore, generally go for examination on weekends. If there are results, it's best to find someone to see after work.

There are only doctors on duty in the duty room of each ward. But the operating room is different, especially because Jinhe is too close to the capital.

At the weekend, experts from the capital came to Jinhe to fly knives carelessly. This distance is really unfriendly to the local doctors in Jinhe, because throwing knives is too easy and their technical improvement is relatively slow.

But for patients in Jinhe, although they are not from the capital, it is still very simple to enjoy the treatment of capital people.

Zhang Fan has two operations to do today, one in the morning, one in the afternoon, one on Sunday morning and one in the afternoon, and then take the plane in the evening to fly tea. So time is still very tight. The intensity of this operation seems to be much less than that at work in the past.

Although the number of operations is small, the intensity is not small at all. On weekdays, they are familiar colleagues. To be vulgar, they all know the depth and length of each other, so they also have a tacit understanding in the cooperation of surgery. When it's time to push, push.

But the throwing knife is different. Even if the three assistants are academicians, Zhang Fan doesn't dare to take it lightly. From beginning to end, almost everything is done by yourself, so it takes a lot of effort. This is also the reason why doctor Feidao can't do several operations at a time.

It can be said that if you go to a big hospital to find a famous doctor, he may not be able to operate on you in person, but if he comes to the Throwing Knife, even the suture will not be replaced by others. This is the professional rules made by the Throwing Knife doctors themselves in the medical industry.

Because this operation needs the hospital report of shangjinhe hospital, the hospital leaders did not arrange any teaching observation, but almost all the orthopedic doctors of the hospital came.

In the operating room, the directors of several spine were all assistants. In the original operation of four people, including Zhang Fan and the manager of the instrument company, seven people went up properly. The doctors with some status in the Department are all in the operating room. They can go up

and help disinfect. It can be said that they all have a brand.

The doctors for postgraduate study and a group of residents watched the operation through lead glass next door to the operating room. This is also a feature of orthopaedic operating room, because orthopaedic surgery often requires X-ray fluoroscopy during surgery.

Therefore, in the orthopaedic operating room, there are lead plates mixed in the wall, and lead containing glass hung on the wall, so that people next door can observe.

Often during surgery, patients are turned over by anesthesia. For example, for a simple one, raise your hand, and patients can't do it. At this time, how to do? A doctor must come out to take photos. Although there are protective clothing such as lead clothing.

But sometimes, shoot more than once. Sometimes, shoot once and shoot once. The doctor who brushes his hands, if he takes a picture and brushes his hands once, it is estimated that he can't finish an operation in a day.

Often at this time, unmarried doctors and female nurses will hide, and married doctors who have given birth to children will stand up and raise their legs to take rays. Needless to say, this is commonly known as reservation. Because radiation is the most sensitive thing to glands, such as thyroid, breast and \* \*.

This sacrifice is not recognized by hospitals, such as special subsidies for special industries. The doctor doesn't care. There's no way. If you eat this bowl of rice, you have to suffer this crime.

Today, however, the room blocked by lead glass is full of doctors, including green graduate students, advanced doctors, and residents of various orthopedics departments. For example, a flying knife doctor came to fly a knife.

Although the department leaders didn't force those who are famous or have a high status in the Jianghu, all young doctors will come. Whether they understand the operation or not, whether they can help or not, they will come. Even if they stand up for their girlfriend, they will bite their teeth.

It seems that it won't dissolve in the Department without coming.

Zhang Fan's female classmate and several of their first graduate students stand together.

In the hospital, the status of graduate students is very special. In-service doctors are very polite to doctors who come to study. After all, it is uncertain that they will rely on others to fly knives that day, but they have a general attitude towards masters, because most in-service doctors regard these graduate students as potential opponents.

Therefore, in the hospital, most graduate students huddle together to report for warmth.

Of course, the doctor is another state. Just like in the three circles, their main job is to work for the boss in the laboratory, not in the Department of the hospital.

Several graduate students gathered together and muttered in a low voice " I'll go. Your classmate is too awesome. Look, look, Lao Wang is modest and doesn't dare to stretch out his hands. Is this Lao Wang? Is this still the king! Tiger Wang? "

Lao Wang is the director of the third spine department. He is usually the most overbearing and harsh director. He hardly works as an assistant in surgery. Unexpectedly, standing in the position of the third assistant today, he pulled the hook and saw that Zhang Fan was a little free, so he hurried to ask his own questions. He was very modest.

Shao Hua's female classmate has a bad face. She is biting her lower lip and is bleeding. She doesn't know the pain. Although she didn't speak, the others, like curious babies, kept asking questions: "is he really with you? It's too abnormal. It's so excellent. Was it a Xueba in your school. I guess so! "

Several male graduate students, like seeing a ghost, looked at Zhang Fan and then looked at themselves. They felt that their university was in vain.

Another female graduate student who didn't have a good relationship with Zhang fannv's classmates on weekdays looked obliquely at Zhang fannv's face. The contradictions between female doctors were particularly interesting and often not in interest. For example, the director was a little better, sometimes it would make another female doctor dissatisfied.

"Hey, hey, now we're going to stutter with Xiao Li in the future. The director will treat him differently in the future.

Xiao Li, don't hide. Call your husband, take us and invite other experts to dinner. After all, it's still an old classmate. Let's get some light! "

He said, but his eyes looked into Zhang Fan's eyes. He felt as if he saw a prairie on Li's head. Then he looked at Li as if he had been abandoned. He felt that he was gloating.

Anyway, the relationship can't be eased. When we can fight, we will never miss every opportunity. This is that people with a small pattern will stare at their eyes and make them die.

"All right, you don't have to say a few words. Even if someone else's old classmate has a meal, what's the matter with you!"

Talked to the female doctor who had a better relationship with classmate Li. While talking, he pushed classmate Li around him. This is so different today. If it were normal, it would have been noisy earlier. But today it's like a wooden man.

On the operating table, Zhang Fan explained to several directors while doing it.

"The joint system is disordered and cannot be divided by knife and electric knife, because the postoperative scar will cause compression..."

Zhang fan works very fast. Compared with other Throwing Knife doctors, Zhang Fan's biggest advantage is that he is young. Doctors who can fly knives are often in their early fifties. Almost all doctors in their forties are scaly hair and Phoenix horns, and in their early twenties, well, that's Zhang Fan.

Regardless of experience, people in their early twenties are definitely more responsive than those in their early fifties. Plus Zhang Fan's skilled and accurate hands.

In spinal surgery, it is particularly powerful.

Dexterous and accurate, it seems that you can't see how powerful it is in a small operation. How about the postoperative patients? The subjectivity is too strong to make comparison.

But in the operation with a large operation area, Zhang Fan's accuracy is immediately different.

Spinal surgery is almost like wearing reverse clothes, opening all the buttons on the back, opening and leaking.

The muscles in the back open directly, and there are too many blood vessels near the spine. If it is not accurate, the bleeding at one point and two points will converge into a lot of bleeding, and the surgical vision can not be seen. It is like a battlefield, bleeding everywhere and showing flowers everywhere.

Zhang Fan's accuracy is different.

There was almost no bleeding in the surgical field of vision. The original bright red surgical field of vision made Zhang Fan operate as if he were dissecting in a general teacher without blood.

Thousands of CC blood have not been input yet.

Before entering the key steps of the operation, Zhang Fan has convinced several directors.

"Zhang Yuan! It's terrible. This wound is too powerful. " Director Liang said from his heart.

As soon as an expert makes a move, he knows whether there is one.

I've heard that Zhang Fan is very powerful, not quite so powerful.

The first one, surgery, joint disorder, secondary injury, the difficulty of surgery is relatively high. Zhang Fan started at 8 a.m. and did it until 3 p.m. It's hard to say whether the doctors are hungry or not. Anyway, the families outside the operating room are starving to death.

When sewing, Lao Liang and Lao Yang wanted to replace Zhang Fan. Zhang Fan refused with a smile, and several directors didn't matter. Anyway, this is the rule.

"Zhang Yuan, what would you like to eat at noon? I asked someone to prepare. The operation is almost over. How about steamed stuffed buns? " Lao Yang was very happy to see that Zhang Fan began to sew, because he gained a lot today. After watching Zhang Fan's operation, many things blurred in his heart were a little transparent.

"Let's eat some simple steamed stuffed buns. There is an operation in the afternoon. After eating, we will continue the operation. The patients are estimated to be in a hurry."

"OK, can the chicken talk?"

"OK!"

Finally, at 3 p.m., the first operation was over.

"After going back, we must do a good job in postoperative care. After all, the patient is old. Although there is not much bleeding, the injury is still great. Be careful. "

Zhang Fan looked at the patients promoting ICU and specially explained.

"You can rest assured that you will be accompanied for 24 hours."

At this time, the family members of the second station have bought a lot of noisy chickens.

## **Chapter 1085**

General large hospitals, no matter how small, have a doctor's stove. Because doctors can't leave their posts to eat, especially surgeons. The lunch time is generally only 20 minutes. Eating, drinking and Lasa should be solved within 20 minutes. To tell you the truth, I was wearing hand washing clothes, wiping the grease nipples I had pulled a few times, and preparing to go to the bathroom with toilet paper.

Really, it sounds beautiful, surgeon. It's so awesome. In fact, it's hard to die.

If you meet a kind-hearted Dean and the doctor's stove is better, the surgeon's stomach disease will be less. If you meet a canteen owner and surgeon who is said to be force majeure, you have to eat soft food when you are not old.

For example, the former canteen owner of chasu was more bossy than the Dean, so he didn't say the taste. He told me whether he was cooked or not. To tell the truth, he fed the food to the captive pigs, and it is estimated that the pigs don't eat it.

Because the hospital usually pays for lunch, this kind of canteen is usually guaranteed for drought and flood. No matter whether anyone eats today, at the end of a month, the hospital has to pay the meal per head. It looks like a small business.

To tell you the truth, this thing is a replica monopoly. It's really not easy for ordinary people to contract a doctor's stove in a hospital, because the money is too easy to earn, and it doesn't leak the limelight. Even if the inspection team will peek at you, they can't see a small canteen. Therefore, this is a good business to make a fortune.

A small supermarket in a hospital and a small canteen in a hospital can't exist.

The bigger the hospital, the more it can't say if it meets a canteen owner with force majeure. Doctors work overtime on weekends. People don't work on weekends according to the two-day rest system.

So doctors have to find their own way. Doctors with brand names are relatively better. They have forced a young doctor who is working hard and struggling. Eat better, reluctant, can only make do with it.

Doctor throwing knife is different. Originally, Lao Yang was going to let the equipment go to buy it. As a result, the patient of the second operation directly wrapped up the money. Even the nurse brought him for further study and directly bought thousands of dollars of chicken legs.

The patient in the afternoon was a strange man. In his early years, he was from Jinhe bus company. There was a gust of wind blowing that year. He was sent to the sea. It is said that he reported that the unit leaders stole gasoline or monthly tickets. Anyway, he was sent to the sea.

At that time, the man left the bus company with a spirit in his heart, and then joined the rental industry of Jinhe. He started a self-employed business with a small bread that was also called Jinhe Dafa at that time. When there were units, they would definitely look down on the self-employed without units, and even be called blind.

Even the entrance guard's questions reflect a sense of discrimination. When you go to a certain unit to work, the other person's uncle doesn't ask why you're here. First ask you who's from that unit, and then ask you what you're doing. It was good for the self-employed to close the door.

Although suddenly people from the country have become their own people, neighbors gossip, relatives and friends have become strange. But the patient tasted the sweetness. When the ordinary workers in Jinhe paid one or two hundred a month, he passed a thousand a month.

Monthly high income, life becomes moist, he works harder. His urine was choked, but a guest waved to stop the car on the side of the road. He bit his teeth to pick up the guest.

Day after day, year after year, driving for more than ten hours every day, I go home hunchback. Lying in bed, I groaned in pain. When I turned over, I heard my waist creaking like an oil door. But at dawn, the energetic man threw the dishes on the road.

In those days, there were many people who had money by taxi, such as those who speculated in stocks, those who went south to Yangcheng, or those who went to the capital. There were all kinds of people, and many who lost their homes by smoking a drugs and gambling. I don't know that his ancestral grave is smoking. He bought a house honestly after he began to make money.

As a result, when the house price was eight or nine hundred, people began to start the house in Jinhe. Although the house price in Jinhe was not as legendary as that in the capital, it was not something that ordinary people could play.

It's good for others. In the past ten years, there are dozens of Jinhe real estate.

After catching up with the rise in house prices, he suddenly became a billionaire overnight.

However, the waist is useless. Fortunately, the children all worked hard. In those years, the turntable provided for two children to go to school, and both became college students.

This time I was hospitalized, and the child spoke. For the best doctor, the cost of surgery is not a problem.

When I heard that the chief surgeon wanted to eat the chicken in the pit, people directly drove a Land Rover and loaded half a car. While delivering it, they also said, "the doctor is so approachable. I'll have this at noon?"

An old lady Li Rong's accent, but listening is awesome.

In the rest cafeteria of the operating room.

Several directors accompanied Zhang Fan to eat at a table.

"Why don't you go and say hello?" Encouraged by Zhang fannu's female classmates, it's too difficult for graduate students to stay in Jinhe.

Therefore, when she saw that Zhang Fan was so valued, she felt that this might be an opportunity.

Zhang Fan's female classmates are beginning to be disordered now.

Really, in those years, she may have brought some time confusion to Zhang Fan, but heaven spared who. Unexpectedly, today, Zhang Fan brought her confusion, more than some time. Now she doubts her efforts over the years and her husband's efforts.

This is the mentality of people.

Not everyone dares to say that they know themselves. In fact, the people who really know you are estimated to be your children who will grow up in the future. Others, including your spouse, may not be able to see you clearly.

Finally, Zhang Fan's female classmate still didn't come to say hello, and from then on, it's estimated that she will never eat chicken again. It's too sour. I feel that the chicken leg is more sour than old vinegar.

Looking at Zhang Fan with a peasant face, she was more uncomfortable talking and laughing with the directors who had no chance to curry favor with her in the past.

.....

In the afternoon, Zhang Fan was still the main knife. This time, Yizhu was replaced by Lao Liang. Lao Liang and Lao Yang didn't know what agreement they had reached in private.

From beginning to end, Zhang Fan did it himself, and absolutely didn't let his assistants do more work, although the operation didn't let them participate too much.

But Zhang Fan is not vague in answering questions and explaining.

Answer all questions and even talk more about what they didn't ask.

This is ethics.

"Zhang Yuan, this operation doesn't need to be reported in the hospital. Hehe, don't laugh, but this operation can publish papers! "

Zhang Fan's eyes lit up as soon as he heard it.

"Really? Can I go to a core journal? "

"Hehe, you are so modest. I don't think there was any problem with the supplement of the last Lancet."

**Chapter 1086**

In the past, writing papers for Zhang Fan was actually like his mother calling his children to do their homework when he was a child. Lu Lao, the green bird, is Zhang Fan's parent. He talks endlessly, but the child's subjective initiative is still relatively poor.

Simply being famous is too tempting for Zhang Fan. Maybe he is young or hasn't felt the benefits of fame,

But now it's different. Although the benefits of fame haven't moved Zhang Fan, the value of the paper has been reflected. At Lianda, Zhang Fan thought there was nothing wrong with the three decomposed three-dimensional anatomical drawings, but he changed 300000.

It feels like it's too easy to make money. This is just like when young people love, they just want to pull the little hand at the same table, but once the ring is opened, the handle has become a means.

Therefore, as soon as Zhang Fan heard the other party say so, he immediately moved. After all, a doctor with a mortgage is terrible, isn't he! According to rational analysis, Zhang Fan has graduated for more than three years and is now regarded as a property owner.

A house in mordu, although not very large, is in a good position. Looking up, you can see the signal tower holding the ball and a wealth river at the foot. Although I still owe elder martial brother some house money, I have a house in mordu.

There are also three houses of tea vegetable. Although the price is not high, it is also an asset. As for several cars, I don't say. Now, although I can't become a rich man, I can be regarded as a small value.

But Zhang Fan felt as if he had been set by life. The more you earn now, the more money you can't help spending. In fact, Zhang Fan sometimes misses the time when he first went to work in tea plant. At that time, Batu stole three or five thousand. He was happy all night. When he first drove, he felt he could fly.

But now, I've won thirty or forty thousand in a day or two. Although I'm very happy, I'm never happy to the extent of thirty or five thousand. Maybe it's the increase of the threshold.

However, the improvement of surgery and the application of surgical technology are now thrown like a game that can't pass the customs, which makes Zhang Fan obsessed.

In fact, this is a man.

Although the age is growing, the lack of hobbies has not changed much.

When I was young, I liked my big sister in her twenties. When I was middle-aged, I still liked my little sister in her twenties. Even when I was seventy and eighty, I still liked my little girl in her twenties.

Interest in games will never change.

Unless life pressure, men will become so-called mature.

Zhang Fan on the operating table was very happy when he heard what others said. Although Zhang Fan didn't have much money in the past, except when he first went to college, his family borrowed money from relatives. Later, even if he went to sell instant noodles, he didn't find anyone to borrow money. Now, although there is no pressure, he always seems to have something in mind when he borrowed money from his senior brother.

This also shows that Zhang fan can't do business and become a tycoon.

"Hehe, the main reason is that I can't take care of it. The scientific research force of our hospital is not very good!" Zhang Fan said modestly while sewing his skin.

If a trainee doctor says this, everyone will think, well, yes, not only can't care about it, grass-roots hospitals should have the consciousness of grass-roots hospitals.

But when Zhang Fan said it, everyone listened and felt like pretending to be forced, but when you think about it carefully, it seems that what others said is the truth. After all, tea vegetable hospital became a member of Frontier Medical University last year regardless of its location in the frontier.

Not to mention tea vegetarians, even if the whole frontier is not very powerful to tell the truth, but a Zhang Fan has emerged in recent years, just like a camel in a sheep.

Zhang Fan is also bad at learning now. If in the past, Zhang Fan definitely said this: really? Where can we cooperate?

At the beginning, Li Cunhou was lucky to meet Zhang Fan who had not been taught by Ouyang, and then it was an old bird bullying a bird. He even fooled and yelled and pulled Zhang Fan to his chariot. When he got on the bus, he wanted to take it away. It was best to be his own student.

As a result, strong middle has a strong middle hand. Ouyang's set of combined punches has added one more burn skin cooperation department.

In the middle, Zhang fan can't see a lot. Not only did he learn some laboratory techniques from Li Cunhou, but also from Ouyang how to deal with people like Professor Li.

Therefore, when Zhang Fan seems modest to say so.

Good boy, that's great.

The directors are better, but the doctors below the director, especially some doctors who are about to graduate, have bright eyes.

Moreover, when Zhang Fan finished speaking, the instrument manager on the operating table also said interestingly, "hehe, if Zhang Yuan doesn't dislike our company's small, we can invest some scientific research donations!"

In general surgery, it is not necessary for this instrument manufacturer to arrange people on the operating table, but it is different in orthopedics. Many instruments need to be installed, or some materials can only be prepared during surgery.

For example, hip surgery requires bone cement. Because the bone is hollow, the instrument inserted into the hollow bone cannot be fixed by friction alone. In order to make the instrument more firm, special cement needs to be used.

This cement is almost the same as the good glue of the brother, and it needs to be allocated before use. Once the dispensing is made, it must be used in a few minutes, otherwise the others will solidify. Therefore, there are often instrument manufacturers on the orthopedic operating table.

When Zhang Fan and the equipment manufacturer are modest.

The doctors in Jinhe are not well. Is today a bixu meeting?

A doctor who can fight with a special hospital said he was not good.

An orthopaedic instrument company in the world can say that its company is not big.

In fact, this is the art of chatting, which is the technology to lead the topic.

Although modest chatting is slightly suspicious of pretending to be forced, if it is suspected again, there will be no situation in which everyone will raise the bar. The more modest it is, the less it will be. The more boastful it will lead to the emergence of the bar. But now Zhang Fan leads everyone to be modest

"Hehe, Zhang Yuan, what do you think of our spine orthopedics department in Jinhe? Can you see it in the past?" Lao Yang didn't expect Zhang Fan to be so talkative.

If ordinary experts write papers with their own surgery, others want to get in and joke, the eggs can be torn to pieces, but Zhang Fan has opened his mind directly and generously.

Therefore, not only Lao Yang, but also several other directors accompanied with smiling faces, feeling more and more in their hearts, "people are angry than people. If you are young, you still have such a big mind!"

Zhang Fan smiled. He really smiled. That's the result he was waiting for.

Although he spoke and sewed meat in his hand, he was happy.

This man is a very strange creature. He doesn't drive away and leads backward. If Zhang Fan asks directly, maybe some people really think they can live in rare goods, but if it's like this, everyone will think that this is an opportunity and rush quickly, otherwise they won't have a place.

"Of course you are. How can hospitals in North China not? Look at your team. Look at the doctors and masters. How powerful they are." Zhang Fan stopped his work and looked up to inspect it.

Under the eyes, everyone raised their chest.

## **Chapter 1087**

He entered the hospital at 7:30 a.m. on Saturday, and the operation lasted more than 6 p.m. Although there are only two operations, but the operation is large, and from beginning to end, Zhang fan does the main work, and even suturing Zhang Fan doesn't give anyone a hand. Therefore, after the operation, Zhang Fan felt a little tired.

But after the operation, Zhang fan can't go to rest, because he has to see the patients who have had surgery in the morning, that is, the so-called postoperative ward round. Preoperative ward rounds and postoperative ward rounds are particularly important for flying knife doctors.

Big hospitals are better. All kinds of rules and regulations and professional ethics of doctors and nurses are online, so relatively speaking, flying knife doctors can save snacks slightly. But if they go to hospitals below level II, to tell the truth, the surgery was not a problem at that time, and the biggest problem was before and after surgery.

When Zhang Fan was not the executive president earlier, Ouyang asked the medical department to write a note to Zhang Fan in order to appease Zhang Fan and cut off the flying knife qualifications of other directors. At that time, the directors of the hospital complained about Zhang Fan.

At the beginning, Zhang Fan really practiced his proficiency against the pressure inside and outside the hospital. In the hospital, the shady language of the directors of major surgeries and the hospital of throwing knives made Zhang Fan scared.

Once, it was a comminuted fracture of the left leg because it was a fall injury. Although there was no obvious skin break, the bone was fractured and both legs were obviously swollen. As a result, the doctor in charge of the bed didn't know whether he stayed up late the night before playing mahjong, or whether he stayed up late to compete with his girlfriend and came to work.

Then he hurriedly copied a similar medical record and took it into the operating room. Because it was Zhang Fan who wanted to fly a knife, the resident doctor in charge of the bed asked the superior doctor to send him to the outpatient department to take over the shift for the director.

In order to get closer to Zhang Fan, the director disinfected himself. Take the wrong case and carry the right leg of the patient who has been turned over by anesthesia. At that time, Zhang Fan also just started throwing knives and was inexperienced. He didn't make a preoperative ward round.

When all the preoperative preparations were ready, Zhang Fan was ready to cut the skin with a knife. Because there is no broken fracture, Zhang Fan generally has to touch the broken end of the fracture to cut it, unlike ordinary doctors who cut it according to textbooks.

The first mock exam was really saved. Because although the legs were swollen, the hair on the swollen legs stood up like a hedgehog pricking, but Zhang Fan didn't touch the broken end.

Don't say it was sweat at that time. The urine was almost scared out. The director of the county hospital was scared green. If he really wanted to go down with a knife, open his skin and muscles, he found that the patient's bones were good. What should he do?

This is a medical accident.

And this kind of thing hasn't happened. A county hospital somewhere encountered this kind of thing, but the doctor in charge of the knife didn't have Zhang Fan's sensitivity. Let's see, the bone is good.

The wonderful doctor didn't know what to think. He put a steel plate on the intact bones of others! He treats the patients and their families as fools. Does he still want a rebate on the two steel plates?

This is preoperative and postoperative.

Zhang Fan has just become the executive president of tea element. Shi Lei, President of quark county hospital, will come to curry favor with Zhang Fan. Shi Lei is a smart person who can draw chestnut from fire. When Zhang Fan was quarking, Shi Lei deliberately better Zhang Fan.

Later, when Zhang Fan became the executive director of the largest third class hospital in the urban area, not to mention. Earlier, Zhang Fan thought Shi Lei was really good and a real person. Later, under the careful guidance of Ouyang, Zhang Fan thought Shi Lei was too dangerous. In the affairs of Batu and old Zou, what role Shi Lei played, like fog, made Zhang Fan unable to see clearly.

At that time, Zhang Fan didn't understand. Shi Lei called to ask expert Zhang Jinyi to return home and go back to his mother's house for surgery. Zhang Fan was very happy to go to quark.

It is also a spinal operation, but the operation is not difficult. After the operation, Zhang Fan and Shi Lei returned to tea after dinner.

As a result, the next night. Shao Huaxi was white, bright red and charming in bed. A quark's phone called Zhang Fan.

The doctors in charge of the bed cried and said that the intern went to change the dressing. As a result, the incision suture of the spinal patient was removed.

And this patient is said to be a retired leader of a bureau. Zhang Fan threw down his condom and drove his car towards quark. It was windy and snowy. That night, Zhang Fan was unforgettable.

Shi Lei's phone can't get through. Zhang Fan is ready to accept the questioning of the patient's family. Fortunately, the patients and their families were reasonable. Zhang Fan personally pulled the incision together with adhesive tape.

Therefore, several things come down. As long as it is a flying knife operation, Zhang Fan will definitely go to the ward rounds before and after the operation. No matter how tired or how late, he will go to the ward rounds.

After the operation, just after the operation, Zhang Fan saw a large group of doctors still outside the operating room. Generally speaking, doctor Feidao's name is a little bigger, so everyone will give face. He comes in the morning and is almost finished in the afternoon.

But today is different. Many people haven't left. Moreover, most of them are doctors, because the hairline is higher and higher, the medical doctor is tired, and the medical doctor is more tired and bitter. Many professional doctors are the mainstay even if they can't become the top in the industry after graduation.

He attended a compliance meeting after graduating from the medical doctor's degree, which can only be said to be a long march. A doctor of medicine is 30 years old after three years of postdoctoral training from the age of 18 to the time of graduation.

This is still smooth. If you want to be smooth and don't boil off some hair, how can you say it in the past. In medicine, there is a doctor's joke. After graduating from the doctor's Department of Dermatology, one day in the clinic, he met a man with a big belly. He said that he married a little daughter-in-law. Everything was harmonious, that is, his hair was bald.

So I want to ask the doctor how to make hair grow out. The doctor looked at him and took off his wig sympathetically. "I'm bald. How can you find me to grow my hair?"

Moreover, the doctor of medicine is very special. You may not be able to find a good hospital after graduation. If you want to find a good hospital, you must have good scientific research projects in hand.

Therefore, many doctors don't go out at the post doctoral site because they don't want to go to the hospital, but they don't have hard goods in their hands.

When Zhang Fan said he wanted to find someone to cooperate, really, many doctors were interested. Therefore, Zhang Fan had an operation, and a group of doctors stood at the door waiting for Zhang Fan.

With a group of people, Zhang Fan came to ICU.

In the ICU, the patients in the morning are awake. According to the doctor in ICU, Zhang Fan is the chief surgeon. The old man held his hand and said weakly, "doctor, can I still move? Why don't you feel your legs? "

"You can rest assured and have peace of mind. Now the nerves are still edema. You will feel it in a few days."

Zhang Fan checked the patient's incision again, came to the patient's bed just after the operation, looked at the patient's vital signs and the drainage of the incision.

Zhang Fan particularly carefully explained some precautions to ICU doctors.

It's not that Zhang Fan is worried, but that Zhang Fan is really worried. The Medical University of Mishima said in his early years that the most painful thing for doctors is not during the operation, but after the operation.

As soon as I went out, first of all, the family members of the bathhouse rushed over. As soon as Zhang Fan looked, although the other party was gentle, with Phnom Penh glasses, ties and suits, he felt bad about his face.

Indeed, after thanking Zhang Fan for two words, he asked, "Doctor Zhang, you are an expert. Can you

issue a certificate of secondary injury to our family members? "

Zhang fantou is big.

"I can't prove it. I can only say what I saw. The spinal injury is obvious and the nerve is incarcerated and edema. As for whether it was caused by secondary injury, I'm really not sure. "

As he spoke, his family crowded over as if they were going to quarrel.

"Aren't you an expert? We also gave you the medical expenses. How can you not be sure?"

Director Yang of Jinhe hurried forward to explain. Zhang Fan was led out of the corridor by several doctors like bodyguards around the stars.

In fact, the family members do not understand. The doctor is not a judicial organ. He can only say what he sees. As for whether he has suffered secondary injury, it needs the judicial organ to determine.

But often, perhaps because of the doctor's impatience, or because the doctor didn't say what the patient's family wanted the doctor to say, the contradiction arose, and finally

"Zhang Yuan, I'm sorry, we didn't do a good job!" At the doctor's office, director Yang came to apologize to Zhang Fan for the first time.

"It's okay. It's not your fault." Zhang Fan shook his head. In fact, this is the real working state of doctors.

.....

The next day, it was still a whole day's operation. Tired, really tired, but for the sake of systematic proficiency, Zhang Fan is really gritting his teeth and insisting. Men can't insist. It's all young men with green heads.

With the envelope handed over by director Yang, Johnson & Johnson's equipment manufacturer drove Zhang Fan to the airport. At the gate of the hospital, several farewell doctors asked for Zhang Fan's contact information.

From seeing Zhang Fan to leaving, Zhang Fan's classmates didn't say hello to Zhang Fan again. Everyone ignores their relationship as classmates.

Only the female doctor who had a good relationship with Dr. Li looked at his back with envy, "your old classmate is really powerful. Like a Xiake, he brushed his clothes. He is young and rich. If only he were my classmate, I would catch him when I was in college! I don't want to struggle. I don't want to study as a graduate student! "

"How golden! How golden! " Zhang Fan's classmate Li seems to suddenly feel that his heart is dripping

blood again. He doesn't know why.

Sitting on the plane, Zhang Fan was not in the mood to dislike the bumpiness of the plane. Because he was too tired, sitting in his seat, he went to sleep.

It's really physical and mental.

After a few hours of flying, Zhang Fan really slept from head to tail, and the snoring came out.

After getting off the plane, Zhang Fan saw Shaohua and a masculine female boss with sister Mao to pick up the plane.

### **Chapter 1088**

Sometimes when you sleep, you feel refreshed, as if you were several years younger. But sometimes when I get up, I feel weak and even lose my curiosity about the world. In this case, if I sleep too much, I sleep in the wrong posture and poor body position, resulting in muscle ischemia and lactic acid accumulation.

A lot of people pay attention to a pillow. It's hard to say how this idiom was invented in those years, but if the pillow is high, it will definitely make you dizzy. In particular, some elderly people have poor sleep and aging blood vessels.

A pillow high makes others think it's the head of the bed. The pillow is not good, sleep is not good, and one day is drowsy. Then, those who are bought health care products and health care pillows are fooled, and tens of thousands of them take out.

In fact, just lower the pillow and nothing will happen. Pillow, this thing is not only to cushion the head, but also has a function. It allows the cervical spine to rest. When you don't sleep, put a head on the pillow, and then the body and head become a lever. Even an iron neck can't eat it.

Seriously, the pillow should cover the head and neck. This is the normal way to use it. Often fall on the pillow, eight out of ten can't use pillows!

Zhang Fan realized today what is high pillow dizziness. He was tied to his seat by his seat belt and slept with his head twisted for several hours. When he got off the plane, Zhang Fan felt that his steps were a little floating. Look again, the masculine female boss feels that the world is dark.

Look at the female boss with Shao Hua and Jia SuYue's eyes. They will feel, wow, so heroic and handsome. With Zhang Fan's eyes, it is how this guy is a second pancreas.

Originally, Shaohua wanted to pick up Zhang Fan. When the female boss heard this, she had to pick up Zhang Fan with Shaohua. Shaohua was quite puzzled that she was so particular about going to France? In fact, people are not particular about it, but ask Zhang Fan.

Otherwise, the female boss won't take Zhang Fan. Of course, Jia SuYue must not come to pick up Zhang Fan. Now Princess Jia doesn't ridicule Zhang Fan much, but I don't know why. The girl began to hide from Zhang Fan.

.....

The female boss and sister Mao in France didn't come here with tea essential oil at all. They came running for Zhang Fan.

Chinese people also use essential oil, but Chinese people use it with very light taste. Even the world-famous cool oil is regarded by Chinese people as used to kill mosquitoes. Therefore, Chinese people think the essential oil of lavender tastes too strong.

In order to make the taste lighter, many Lavender farmers even put the branches of flowers into a steamer.

In fact, the extraction of lavender essential oil is similar to steamed bread. People abroad only steam flowers and leaves. China wants to steam even the roots of flowers in a pot. The output is high, but the quality is hard to say.

Therefore, the flower is very good, but the quality of essential oil is not very good. Even so, in Zhang Fan's words, how to smell, how to have the smell of a cow burping.

"Hello, monk Zhang. I finally saw you. My father and I, darling, praised you very much! "

Sister Mao also prepared a handful of flowers. She not only presented the flowers, but also warmly hugged Zhang Fan. If Shao Hua hadn't known that sister Mao didn't like men, she would have tasted a little. She was so enthusiastic. Even if she had been married for nearly a year, she would feel shy to treat Zhang Fan in front of so many people.

People who get off the plane at the airport are like watching a play. People passing by look here. In small

cities and small places, it's rare to pick up flowers at the airport.

Listening to Mao girl's strange Mandarin pronunciation, she smelled girl's perfume, body odor and the smell of a shower gel. Zhang Fan was made a big red face, and she didn't know she was shy, or she felt bad.

I blushed anyway.

It is said that in the frontier, the taste is not strange to Zhang Fan. The smell of butter, beef and mutton is mixed with the smell of long-term fermented sweat and the smell of covered feet. Really, this taste is easier to get on than strong wine.

But the smell on sister Mao's body, how to say, is not smelly, but it's definitely not body fragrance. It should be like a particularly good-looking and sweet cream white cake. Cut it open and have a look. Yo, sandwich or stinky tofu sandwich cake! Sweet with a strange smell.

Finally, she broke away from sister Mao's embrace. Zhang Fan looked at Shaohua with a questioning eye. Although sister Mao looks very slender from a distance, you can really feel it. This guy grew up with raw meat as a snack. He can't be called slender.

Shaohua reluctantly tilted his lips.

After sister Mao played, the female boss said to Zhang Fan in a rough voice, "Zhang Yuan, I haven't seen you for a long time. Your career is really booming!"

Then he stretched out his hand to shake hands with Zhang Fan.

Holding the female boss's hand, with Zhang Fan's feeling, this is serious and slender.

They don't look up to each other, and the greetings are extremely short.

If it hadn't been for Zhang Fan, the female boss probably wouldn't have paid attention to Zhang Fan.

The world of the rich is very special.

Generally speaking, the rich have richer resources and more choices. In fact, the richer they are, the more cautious they are. Especially in some old families in Europe and America, choosing a family doctor can almost die from scratch and will not be replaced easily.

I don't know what to pay attention to.

Zhang Fan operated on the boss in France and treated the female boss. It was originally the passerby's Bureau. Unexpectedly, Zhang Fan's fame in Lianda completely reassured the family about Zhang Fan.

Therefore, this time they came to Zhang Fan to see a doctor under the banner of seeing essential oil.

The ocean horse in France is good at everything, but it has too much taste. It can be said that it is heavy to a certain level.

Some Chinese also have a taste, but it's still tolerable. But this hairy girl is different.

Not taking a bath for a few hours is like taking it out of a fermentation tank. More seriously, the girl's armpit is like a chemical dyeing factory. If the clothes are worn for a long time, the clothes under her armpit will be smoked by weasel's fart and have a yellow color.

Even if a girl doesn't take a bath before going to bed and takes off her pants, she can be used as a chemical weapon.

She said it was a serious underarm odor. Therefore, the female boss thought she was attractive, but the taste of others was even stronger.

The female boss can't stand it, but when the bills are cleared, she runs away, and the female boss doesn't dare! And the girl doesn't want to be treated in Europe and America, because her family is too famous. That's why we have a trip to China.

Why choose Zhang Fan? Because Zhang Fan has seen her father and her darling sick.

Many people can't tell, armpit odor, body odor, sweat odor.

In short, axillary odor is included in body odor, but it is slightly different. If explained in professional terms, body odor is the pungent taste secreted by the body surface, which is slightly similar to the taste of the fox's anus, which is called body odor.

Why was this term explained in that year? To tell the truth, Zhang Fan has been wondering until now. Which doctor has nothing to do and smelled the fox's anus?

Axillary odor often refers to sweat produced in the armpit, \*\*, near the genitals and the external auditory canal, which is decomposed by Gram-positive bacteria to produce short chain fatty acids and ammonia, resulting in peculiar smell.

Sweat odor is the peculiar smell produced on the body surface, and women often have more female patients than men because their secretory function is greater than men.

Especially some young women like to wear tight clothes and slim jeans. This leads to the aggravation of body odor. If you have a body position and wear loose clothes, you can evaporate sweat early. In fact, the body smell will be reduced a lot.

After all, the taste of Chinese people is very weak.

Popular explanation, body odor is a pungent body odor, and axillary odor is the sour odor emitted by friction parts such as armpits. Sweat smell is the abnormal body smell after sweating. In fact, it is divided according to the intensity of the taste.

Body odor is pungent, armpit odor is sour, and sweat odor is just abnormal.

In the early years, there was a legend that he didn't know whether it was true or not. It said that the longevity emperor had a quirk and his nose was difficult to use. Generally, he couldn't smell the smell. But since he had the fragrant imperial concubine with strong body smell, he finally smelled the taste, so he loved the fragrant imperial concubine very much.

Sister Mao wants to change her taste, while the female boss wants Zhang Fan to give her a more masculine treatment.

Many people don't know that there is a difference between human demon and two pancreas.

Human demons have clear gender characteristics.

The second pancake is different. The second pancake is actually a dialect word. What is serious should be the second tail, which is a person with dual reproductive organs, and can be used! In the early years, the landlords and local tyrants were particularly wary of such people. They were deeply afraid that such people would sneak into the back house.

Because they are all private issues, the female boss is very modest this time.

.....

On Monday, Zhang Fan presided over the hospital affairs meeting. Ouyang also rarely came to the meeting. The old lady who is addicted to being a contractor hardly appears in the hospital recently.

"How is the progress of the First Affiliated Hospital?" After arranging the hospital's business for a week, Ouyang, Zhang Fan, Ren Li, Lao Gao, Lao Chen and Lao Ju held a small office meeting together.

"There will be no problem with me. I keep an eye on it. If there is a little problem, I will hold an on-site meeting to deal with the problem on the spot." Old Mrs. Ou replied to Zhang Fan with a special hardness.

Several people smiled and didn't answer. Except Ouyang himself, everyone else knows that Ouyang has caused great harm to several vice presidents of the contracted project.

Other people can laugh, but Zhang fan can't. although he is now the nominal executive president, the legal person of the hospital is him.

"You are a top three, but after all, your body can't afford to soak in the construction site day by day. You should cherish your body. If you don't pay attention to your body, you are not responsible for your work. Dean, you'd better have a rest recently!"

Zhang Fan gently advised the old lady. The main reason is that the contractor comes to complain every day, and Zhang Fan is also a little impatient.

"It's all right. What's this? It's too simple. It's easier than the rounds." Ouyang waved his hand and resolutely disagreed with the rest.

Dead Taoist friends don't die. Zhang fan can only do this.

"That's good, that's good. Orthopaedic research center, I expect you to be old! " Zhang Fan now feels that he has been trained by Ouyang. He is talking nonsense with his eyes open and serious.

"President and the high court, I asked about the progress of the project, in fact, because several doctors contacted me when I went to Jinhe this time. They were willing to carry out spinal research with us, and the Affiliated Hospital of feijinhe also promised to undertake part of it."

"Good thing!" Lao Gao is a little excited.

But after getting excited, he quickly braked. He had to let Ouyang say first.

Ouyang glanced at Lao Gao. Obviously, what's the matter with you? I haven't spoken yet. Do you understand the rules? Is the government not busy recently? Do you need me to find something for you?

"Oh, really? The scale of Jin River is a little small! At least we cooperate with special hospitals! " Ouyang's appetite is getting bigger now. Now she doesn't like the Affiliated Hospital of Jinhe.

Lao Gao wanted to say, but he shut up again. Really, when Lao Gao stared at Zhang Fan, he almost said: speak quickly, speak quickly, it's your master.

Some people, obviously everything is good, just can't speak. And some people, obviously everything is ordinary, but they get a lot of benefits because they can speak.

In fact, this is society. Everyone likes to listen well.

Lao Gao's business ability is definitely higher than Lao Chen and Lao Ju, but it is because he is too honest and always feels that the workplace is bumpy.

However, under the influence of Lao Chen, although Zhang Fan's speech is not as proficient as that of Lao Chen, he can also be regarded as a little level.

"In fact, I also thought of it. At that time, I wanted to refuse, but I thought again that you made love

everywhere for the hospital. It wasn't easy, so I promised. Although the scale of the Affiliated Hospital of Jinhe is average, but people have money. Do you think the Affiliated Hospital of the municipality directly under the central government can be poor? Great. Shall we ask for more money? "

Zhang Fan said with a smile.

Ouyang thought, "that's right. Hehe, I like you. You have a good family, unlike some people!"

Lao Gao is settled. He can't afford it!

Ren Li pursed her mouth and smiled.

Among several leaders, her identity is the most detached.

Lao Gao wants to manage orthopedics and go back to clinic. Lao Chen and Lao Ju think about how to go further. Only she is willing to be a quiet expert if she is unwilling to be a leader.

.....

After arranging the major events of the hospital, Zhang Fan also has to arrange the work of surgery. Now, unlike before, many doctors have scientific research tasks, and they are still joint scientific research tasks, so Zhang Fan must make overall planning.

One morning, after all kinds of things were arranged, the afternoon was Zhang Fan's operation time. Sometimes Zhang Fan thinks that other time in the hospital is too time-consuming, but on another thought, the platform is unstable, and time alone is not enough.

Therefore, Zhang Fan is now on the route arranged by Ouyang for Zhang Fan. I have to say that although Ouyang is a petite old lady, the means are still quite powerful.

## **Chapter 1089**

"Master, I'm off work in the evening. I'd like to invite you to dinner." In the orthopaedic operating room, Zhang Fan is training Xu Xian and Zhou Chengfu who play with snakes. These two people have been a little slack recently. It's not bad that the scientific research projects arranged by myself have not been completed.

Just like old Lu's painstaking efforts to teach himself, Zhang Fan has something to learn. Both of them are embarrassed.

Zhang Fan hasn't said to have fun yet. Wang Yanan rubbed over.

"What? Go to your best friend Shaohua for dinner. " In fact, Zhang Fan is particularly satisfied with Wang Yanan. From his love of orthopedics to his professionalism, he is absolutely excellent. But she has a bad attitude towards herself. She is happy and asks for herself. She often cries out sweetly, master. At this time, she is a beautiful girl.

If you don't feel good in your heart, or on a special day every month, don't call your master. If you don't turn white eyes for Zhang Fan, you'll have a lot of face. Whenever this time, Wang Yanan changes from a beautiful girl to a man without a beard.

Therefore, when Wang Yanan was in such a desperate posture, Zhang Fan immediately raised his vigilance. I'm kidding. Zhang Fan has long been a little doctor with her group. He wants to use sugar coated shells. No way!

"It's not Shaohua's business. I just want to invite you to dinner. Are you going?" As she spoke, the girl was impatient. As soon as she stared, her impatient expression came out.

Seeing that Zhang Fan is busy fighting a lawsuit with Wang Yanan, Xu Xian and Zhou Chengfu hurry to slip away. They brush their hands and lift their legs. Xu Xian's recent slackness is because he is in love. He and that flower are a pair of happy friends. Today is good, and tomorrow no one will pay attention to anyone.

That flower doesn't look abnormal, but Xu Xian is obviously different. If one day he sees that he hasn't shaved his beard and still wears yesterday's clothes, he will definitely quarrel. Otherwise, Xu Xian seems to change clothes three times a day now.

Zhou Chengfu is lazy because his children go to kindergarten. His wife didn't know who said that the private kindergarten near their home didn't eat well, and the teacher was not responsible, so she wanted the children to go to the public kindergarten.

I don't know when people's children want to go to a public kindergarten, which is as difficult as going to a 211 university. Lao Zhou found someone who is said to be from an office of the government. He doesn't know what to do. Anyway, he smells like a broker.

The man gave Lao Zhou a cow, 100000 yuan, tea vegetable kindergarten and primary school, and let them choose. After all, the child was his own. Zhou Chengfu gave the other party 100000. As a result, he

saw that school was about to start. The man didn't run away with the money, but things didn't work out. He said that there was a stubble. It took more than half a year for 100000 yuan in vain, which also delayed the old Zhou's children's going to kindergarten.

So, these days, Lao Zhou is busy asking around who knows the dean of public kindergartens. After listening and inquiring, he heard that Xue Fei was familiar with each other. Lao Zhou was slightly unconvinced and didn't find Xue Fei, but wanted to find another way.

In fact, most doctors are like this. At the beginning, they were brothers who reported to the regiment for warmth, were close as brothers, then developed their own, and finally became enemies. Many hospitals finally competed for the president and director, which are often brothers.

Therefore, in modern medical schools, which are hardly famous, it is not that modern people are not as good as ancient times, but that modern leaders are powerful. The role of a director or a dean can tear apart your teacher brother relationship for more than ten years.

Wang Yanan invited Zhang Fan to dinner. In fact, her uncle wanted to invite Zhang Fan to dinner. The director of the health bureau is now under the great pressure of Ouyang. He can't even breathe comfortably. He feels that if he works under Ouyang for a few more years, he won't say if he doesn't get promoted, he won't get cancer.

Now everyone in the Health Bureau knows that the director is in operation and wants to leave the Health Bureau. The natural opposition between the first and second leaders, cooperation and sincere unity, are deceptive. Ouyang is hard to deal with, but this position is also very attractive. Wang Yanan's uncle has some ideas.

So I want Wang Yanan to ask Zhang Fan out to get in touch with him, and maybe he can do wonders in front of Ouyang?

The Chinese elite are right in everything they say within the system. The most thoughtful, patient and intelligent people are almost all in the system.

This is life, but all living, are inseparable from all kinds of relationships, and doctors are not immortal without food and fire.

We have a meeting in the morning, a small meeting in the afternoon, and we have to take time for surgery. It can be said that Zhang Fan's Day is full.

In the afternoon, just after Zhang Fan had a knee replacement operation, he received a call from Chen Sheng at the medical office.

"Zhang Yuan, good news. Professor Li Cunhou just called. The allogeneic skin transplantation materials have passed the clinical experiments in Europe and America. Professor Li is about to return home. He

hopes to meet you and have a talk."

Lao Chen can't hide his excitement. This excitement can just give people a kind of excitement. I'm happy for you, leader. I'm excited for you.

The tone and speed of speech are absolutely consistent with Chen's grasp. The workplace is actually a forest. It's good to survive in this forest. They definitely have their own ability to survive, such as some people's top moves, reincarnation, others' top moves, marriage and so on

People who don't have such a big move must have some small means to press the bottom of the box, otherwise it's too late to cry when the survival of the fittest.

As soon as Zhang Fan heard this, he couldn't hide his happiness. Li Cunhou has always been giving feedback to Zhang Fan. It is all kinds of difficulties, such as reporting difficulties, experimental difficulties and clinical difficulties. Anyway, it is like that the product developed is a defective product and needs to go through the back door.

Zhang Fan didn't understand, so he didn't report much hope. He just asked for more of this material, making the tea vegetable hospital a material experimental hospital. Unexpectedly, Lao Li did it quietly.

If there is still a certain gap between China's medical technology and foreign countries, China's R & D technology of medical devices has been directly different from foreign countries for several generations.

The simplest, such as large equipment, several large equipment in the hospital, MRI, CT, endoscope, Dr and monitor, can be said to be monopolized by foreign countries.

Endoscope, soft mirror Olympus is directly the Tyrannosaurus Rex in the market, with a market share of 70%, and hard mirror Carl STOs has a market share of 50%. Endoscope is highly monopolized. China's own products have almost no post recognition in high-level hospitals. It's hard to hear, but that's the truth.

Not to mention MRI and CT, China is still hovering at the door in the high-end field. The automobile industry has a BBA, and the medical industry also has a famous abbreviation, GPS! This thing is not navigation, but the abbreviation of Ge, Philips and Siemens.

For high-end MRI and CT, the top three companies have directly formed technical barriers. 90% of the world's high-end instruments come from these three companies.

So which of China's medical devices can catch up with advanced countries at present? Is there any? Yes, the household oxygen generator, Yuyue has about 60% of the share. On the electronic sphygmomanometer, Yuyue is catching up with Omron!

In the medical reagent market, Roche, Abbott, Siemens and Beckman almost monopolize all the top three hospitals in China, while the reagent companies in China are still fighting in the secondary

hospitals, which is also the reason why the diagnosis of the secondary hospitals is not recognized by the tertiary hospitals at higher levels.

Zhang Fan hung up the phone and was still proud. In fact, he didn't quite understand how big the cake was.

Lao Li hasn't returned home yet. Major equipment companies, manufacturing and high-precision provinces have set their eyes on Lao Li. If arms had been a golden bull before, the medical market would be a diamond bull now. Although Bangzi country sells mobile phones and washing machines, it can't lift the heads of Meatballs country and Germany.

In fact, the focus of Marubeni and de Mao is not on this.

Lao Li is also tangled now. The largest fishing village in China has contacted him and said that it gives him the same treatment as chrysanthemum. Magic capital, Yangcheng and even Sanchuan have extended a small hand to Lao Li. It's almost said that you can play with it.

Where is the capital still putting on airs, but the golden mean must account for shares. Lao Li's biggest problem now is that the prospect is bright, but the road is bumpy. The material is not a big problem now, but the improvement of surgery is still a huge problem.

Therefore, he now wishes he had Zhang Fan's technology. Unfortunately, he didn't. Therefore, the first person he wants to see when he returns home must be Zhang Fan. Zhang Fan is easy to deal with, but the old lady behind Zhang Fan is difficult to deal with, which is also a headache for Lao Li.

The old lady changed her soft and hard freely. When she went to tea vegetable for the first time, people surrounded the railway station like a marshal. Don't mention her uneasiness at that time. The smaller national capital had no treatment, but she was stunned to let the old lady get it out.

When he arrived at the hospital, he was directly pressed in the outpatient department and in the Department. He brought seven or eight students behind him. When the donkey had a rest, the old lady almost killed him in the tea vegetable hospital.

The most important thing is the interests, iron teeth and sharp teeth, really

Zhang Fanzhen didn't take this matter to heart. He knew himself, his strengths and his weaknesses, so his heart was very quiet and his hands were very stable.

.....

Tuesday, Zhang Fan's operation day.

On this day, before the sun rose, Zhang Fan went into the operating room and worked from general surgery to urology, so he didn't do maternity.

"Dr. Lu, you come for consultation tomorrow. There is a patient who needs a minor operation. You'd better come and give me some advice!"

"What time, the operating room!" Dr. Lu is getting colder and colder. The greedy doctor LV in the hospital didn't know what to do, but they failed one by one.

Women are no worse than men.

On Tuesday, Zhang fan arranged to operate on sister Mao in France.

There are few requirements for sister Mao. First, we need to pay attention to privacy. Second, we need to be as small as the surgical incision can be.

## **Chapter 1090**

Whether the assimilation ability of the Chinese people is strong or not, neither history nor ancient times, let's talk about small border cities. There are many famous ethnic groups here, including Belarus, which was known as the aristocrat in those years, businessmen from Kyrgyzstan, and the Mongolian army with names everywhere in those years.

There are dozens of languages, but the official language commonly used by everyone is not Mandarin or maozi, but a combination of Sanchuan dialect, Gansu dialect, Nanhe dialect and various Southern languages of people in the south of the Yangtze River.

Therefore, the frontier dialect sounds a little like that of other northwest cities, but with a little strange tone. Moreover, there are many local words. For example, curse people with a bag to die, qiaoxiga and other well-known

It's nothing strange to operate on a white man in the tea vegetable hospital, because there are many white tea vegetable and many beautiful white girls. Moreover, she is a white girl who combines the advantages of white and yellow Chinese.

To tell you the truth, when ordinary female stars come to tea vegetable street, they really have a feeling of inferiority. It's no exaggeration for Zhang Fan to pull up a few little nurses in their hospital. They can feel the posture of a woman's Sky Regiment.

If a sister from France has an operation in a small city in the mainland, it is estimated that it will be strange for nurses and doctors, but in tea, everyone thinks she is just a white haired sister.

In fact, there are many old maozi of tea vegetable. I didn't know where they came from in those years, but they seem to have been assimilated by the Chinese people. They eat sheep offal and a mouthful of oil in the old cellar. What's more, their Da lieba smells better than warm imitation. It smells like cream. It's OK to eat it when it's hot. If it's cold, it's very troublesome anyway.

The sister in France is different. It is estimated that her blood relationship is complex. In her generation, I don't know what's wrong. The body odor is quite heavy, and she can also be regarded as a patient with severe body odor. In a country full of body odor, this sister can win with taste. It is conceivable that in a country without body odor, she is directly invincible.

On weekdays, there are several kinds of perfume poisons on the body constantly pouring, anyway, there is nothing serious, nothing to take a bath, the smell of shower gel and perfume is still able to change her smell, but today, surgery, can not use these chemicals, it shows that she is different.

The nurse who prepared the skin almost didn't spit out the milk tea she had eaten in the morning. Just like the legend in the Jianghu, she lifted her arm and lay down. The little girl envied each other's white skin and delicate face like a star. But after preparing the skin, the little girl said to her colleagues that it was too white and bad. She would never be fooled to buy whitening cosmetics in the future.

This is before the operation. I entered the operating room. Zhang Fan came to the fifth operating room of general surgery with Ma Yichen of general surgery, Guli of Dermatology and LV Shuyan of gynecology. In fact, this kind of operation is done in a private hospital with a doctor and a nurse.

And I don't know why people who come to public hospitals for such operations can almost be counted. Is it the high level of private hospitals or the fierce advertising of others? Anyway, many people go to private hospitals for these operations, such as cutting bag a skin, breast augmentation a, elimination of axillary odor, etc.

After going in, a big gift bag and various packages seem to go shopping instead of seeing a doctor.

As far as the tea vegetable area is concerned, the tea vegetable hospital actually did the best in breast augmentation a surgery. Not to mention Zhang Fan, several female doctors in the double gland department thought of doing well. There was a little nurse in the Department of Ophthalmology who got married and had children. As a result, the child had a small appetite and ate less, and she had enough milk a water. She was careless and became a milk nodule.

The little nurse didn't take it seriously. Her husband was also a big horse. As a result, the children were not full moon yet. The little nurse suddenly began to have a fever. One side of the breast a room was red and swollen, just like a flamingo crop hanging on her chest. Let alone feeding the children, she couldn't even wear clothes.

The little girl didn't come to the tea vegetable hospital, so she went to a certain field hospital near their home. She said she was a little shy to come to her own hospital.

As a result, the treatment became more and more serious, and he had to come to the tea vegetable hospital. The director of the double glandular Department scolded him because the breast was infected by milk a water nodules. First, drainage. Many people have heard this word, but they don't particularly understand it.

In fact, the drainage is similar to the opening when picking watermelon. The opening of picking watermelon depends on whether it is ripe, red or not, and whether it is sweet or not. The drainage is almost the same, that is, place a tube where the infected abscess is the most severe to let the pus or congestion flow out to reduce the infection.

But when the mammary gland is drained, the effect is very poor. Because the inside of the mammary gland extends in all directions and there are many secretory ducts inside, this kind of organ is not easily blocked, and it is easy to be blocked.

Because of the developed pipeline, wherever the milk a juice stops, it is a focus. Then, like frog eggs, the effect of drainage is particularly bad. After three days of drainage, the infection continued.

The director of the double gland department clearly told the little nurse to cut off one side of the breast a room. Really, when she heard the diagnosis, the little girl cried to death. The family found Zhang Fan. When Zhang Fan saw it, he was obedient and drained the liquid, just like the stinky tofu crushed by Wang Zhihe and poured some pickled cabbage water.

I can only cut it. When men look at breast, they often drool, whether when they are young or when they grow up. But for women, this is an organ. How old is a little girl? Cut off a breast. Don't mention the beautiful ones first. Even children can't breastfeed, which can affect the life of husband and wife in the future.

When the little girl found Zhang Fan, her eyes were crying like two peaches. Where was it hanging? The little girl's husband seemed to be half dead without food and spirit. Zhang Fan couldn't bear to look at it. The female director of the double gland department can clean up and point at their husband and wife's nose, but Zhang fan can't.

Now maternal nutrition is very good, but the baby's suction is not enough, which will generally cause milk a juice deposition. In this case, you don't need to use a breast suction device. If you feel pain, your husband will be useful at this time. Let him suck while massaging. To tell you the truth, artificial is

definitely better than a breast suction device. If it doesn't hurt, you can clean it up.

But some men don't know what to think. When they turn off the light and don't let them suck, they can't stop them like hungry tigers. Now they let them suck openly, but they twist their heads and don't want to live or die.

In order to make the little girl have a shadow in the future and keep the little girl's relationship between husband and wife unaffected, Zhang Fan personally took the director of the double gland department to design an operation plan for several days, which not only needs to remove the lesion, but also beautiful.

At that time, Zhang Fan and his colleagues really tried their best. The designed breast could really confuse the false with the true. After the operation, the little nurse's husband's eyes were a few bigger. Unfortunately, the director of the breast Department wrote a paper according to the operation scheme they designed, but this paper is for the purpose of evaluating the professional title. It's not only useless, but she also paid for the paper. A good paper was published in a journal of professional water papers. It's estimated that no one read it.

Therefore, in medical treatment, don't feel careless about small things, and don't listen to free treatment, because sometimes free is the most expensive.

In the operating room, sister Mao has been turned over by hemp. Ma Yichen doesn't know when he took a three-layer mask. If he wasn't afraid of Zhang Fan, he probably wanted to wear a protective helmet. The smell of various disinfectants in the operating room can't beat the smell of Mao Mei.

This smell, how to say, is pungent. It can't compare with the smell of pus. In terms of concentration, it is not the time of intestinal obstruction. Doctors take out the stool fermented in the intestine for a long time. But it is better for a long time, just like harbor foot patients in summer, it is wet and seems to stick to the mucous membrane of the nasal cavity.

Ma Yichen is in the liver and gallbladder group of general waiters. He follows Zhang Fan wholeheartedly, so he has not withstood the test of the gastrointestinal group. If he is a doctor in the gastrointestinal group, he will be better after several consecutive intestinal obstruction operations.

The boy, while disinfecting, er, er, like a pregnant woman seeing braised meat, hasn't stopped since the moment she picked up iodophor.

Originally, everyone was putting up with it, but this boy, like constantly reminding everyone, er, smell it, er, smell it!

Zhang Fan was crazy: "what's the matter with you? Did you eat too much? No, no, go down. " I have to black my face.

Ma Yichen bit his lips with embarrassment. To tell the truth, Zhang Fan is actually uncomfortable, but if he can't help it now, how will he do the operation later?

.....

Outside the operating room, Shaohua and Jia SuYue accompanied the female boss to wait outside the operating room. After all, they were customers. Shaohua and Jia SuYue accompanied him more and more. Shaohua kept a low profile and didn't tell Zhang Fan when he came.

She was deeply afraid of bad influence. As a result, the head nurse in the operating room found out.

The head nurse in the operating room used to flirt with Zhang Fan from time to time before Zhang Fan became the dean. With Zhang Fan's status getting higher and higher, and she also went out with Zhang Fan to get some extra money, so she is very interested in Zhang Fan now.

For example, Zhang Fan's hand washing clothes in the operating room were not washed by the people in the logistics laundry, but by others themselves. Moreover, the small lounge in Zhang Fan's operating room was very warm. Of course, now flirting is afraid to flirt, but from time to time, I will make some superfluous expressions for Zhang Fan's intentional frown and smile.

Zhang Fan has no choice. He really has no choice for such a young woman.

"Oh, Mr. Shao, why are you here?" After seeing Shao Hua, the head nurse in the operating room reconfirmed, walked in quietly and whispered. Human essence is human essence. I have to take it. Two of the human essence in tea vegetable hospital are the best.

Lao Chen and Chen Sheng are the best men, and the head nurse in the operating room is the best woman.

"Oh, oh, my friend has an operation, I'll..." Shaohua was asked a full head Hello, because she didn't know each other.

"You see, hospital Zhang is busy all day and can't care about big things. Tell me about such small things. After all, I'm still the head nurse in the operating room. I don't have a seat in this place." Unable to help himself, the head nurse took Shaohua to the head nurse's office.

Serve tea and pour water. People don't feel embarrassed at all. Like a friend I haven't seen for years.

"Mr. Shao, sit down first. Don't worry. It's a small operation, and Zhang Yuan did it himself. There's nothing to worry about. I'll show you. The operation is almost finished. I'll inform you." After that, the head nurse in the operating room left with Xiangfeng.

"What a demon!" Jia SuYue said unwillingly.

Shao Hua didn't say anything, but he glanced at Jia SuYue angrily.

As a result, the chief nurse of the hospital came and the director of the anesthesiology department came in to say hello. The vice president in charge of logistics also came in with a smile.

Everyone seems to be looking for the head nurse in the operating room, but as soon as we enter the door, president Shao.

Others are better. Jia SuYue regrets that he came to the hospital or that year.

.....

In the operating room, everyone looked curiously at sister Mao on the operating table. Even Zhang Fan is curious.

### **Chapter 1091**

x

Skin preparation, Chinese people's skin preparation is actually very simple. Except for the head surgery, the nurse takes a little trouble, other places are very simple, and even some places do not need to make special preparations. Skin preparation is actually skin preparation before surgery.

Sister Mao's operation is very special today. She not only needs to prepare her armpits, but also needs surgery on her lower body, even around her breast. The scope of skin preparation by nurses is very small, but the scope of disinfection during surgery is very large. For example, for appendix surgery, almost the abdomen needs disinfection, especially the navel.

The disinfection scope of sister Mao is also very large, especially the legs. When the Yellow iodophor is wiped on sister Mao's body, it was not particularly obvious hair. It was like applying chemical fertilizer and growing vigorously in the sun.

Moreover, under the shadowless lamp, the wet iodophor hung on the yellow hair, just like the golden ears of wheat with dew under the sunrise. Especially on the white skin of sister Mao, it is particularly obvious under the shadowless lamp.

Not only the nurse, but also the anesthesiologist curiously poked his head and looked at the peepscope.

Zhang Fan has no way to say. He can't say that you are curious, because everyone is really curious.

"How did the nurse in your department prepare the skin!" Helpless Zhang Fan, like driving a chicken, let

everyone take back their eyes. Well, Zhang Fan is also very curious. He secretly looks at it from the corner of his eye. There are so many hairs. No wonder the Chinese used to call them maozi. It's really right.

After skin preparation, Ma Yichen with gloves laid a single hole covering surgical towel. Ma Yichen took a gauze and padded it on the skin. Once again, she had to shed hair for sister Mao. Under the blade, the yellow hair was cut clean. In order to ensure the cleanness of hair, Ma Yichen also touched it with his hand.

"Is it clean?" Zhang Fan asked.

"It's a tie!" Ma Yichen answered the question!

God's special Mody is very strong. Zhang Fan stares at Ma Yichen. I personally touched the skin to be cut. Surgical incision is usually afraid of infection, which is why skin preparation is necessary. Hair is rich in protein and oil. If skin preparation is not good, sometimes the incision will be infected.

Moreover, the incisions of sister Mao in France are all places where dirt is hidden. It was originally a place where infection occurs. If you don't pay attention, you may get infected as soon as you sweat after the operation. If it's infected, it'll be a joke.

People who traveled across the sea specially came for surgery. As a result, you made an infected incision for others, which is unreasonable. Therefore, Zhang Fan started by himself while watching Ma Yichen. As a result, a touch really pricked my hand.

I feel in my hand. How to say, I close my eyes and think I'm touching the unshaven chin of a careless man.

"I can't shave clean!" Zhang Fan said an awkward sentence and didn't ask for a knife. He said to prepare a skin. For he also knew that the hair of sister Mao was different from that of sister Hua.

If the light is turned off at night, Lou Zai thinks he hasn't taken off his sweater! The west wind has been blowing fiercely in recent years. Girls often buy hair removal cream and bare leg liquid. It's hard to say whether the hair can fade clean. It's definitely damaging the skin and hair follicles.

The chemical agent leg hair, if you don't like it, is actually like the use of 666 powder in farmland. Anyway, it is a matter of killing 1000 enemies and losing 1500. The ancestors of the Chinese nation have invented the hair removal artifact for a long time.

A rope can twist the hair clean.

This kind of woolen doll can't help it. Even for ordinary girls, even if there is a little more woolen, it's just a little more woolen, but it seems to be nothing when it's long, but it's short. You can feel the unfriendliness of this thing with rubber gloves.

The operation of axillary osmidrosis is mainly under the armpit, but because the taste of the lower body of yellow hair is also quite superior, she strongly demands that the lower body should also be treated for her. It's really difficult to handle the underarm well, but it's not easy to think about this one.

The family is so rich that they have everything they want. But when they take off their pants, they seem to pull their crotch. In fact, Zhang Fan sympathizes with him. So beautiful, such a good condition, there is a large perfume family, but can not speak their own strong flavor.

It is estimated that their family studied perfume in that time. Maybe there was one of her ancestors who was similar to her. Maybe she was able to marry her daughter-in-law, and studied her perfume with great concentration. Otherwise, apart from the great perseverance of single Wang, which boy would go to study perfume?

Lift your arms on both sides and leak out of your armpits. The lifting is as like as two peas. The ceiling of the operation room has tracks, and all kinds of spreaders are like the hooks in the slaughterhouse. Although the names are different, the fineness is different.

Ma Yichen is wearing a mask, and there is a bump between his nose and mouth. Zhang Fan knows at a glance that the boy may use his upper lip as a stuffy nose against his nostrils. If you want to say that this smell can make people vomit, it is a bit exaggerated, but it can definitely make people go up.

Ma Yichen also regretted this meeting, just like sleeping and humming after getting drunk. People are different from people, just as some people's navel is like a protruding small meat twist, and some people's navel is deep enough to pour one or two wine.

And this hairy girl's armpit is unfathomable. If you put a fist in it, you will still be rich. Therefore, when the rope was pulled from the ceiling hook to lift their arms, Zhang Fan and Ma Yichen did not squat for surgery.

The operating table rose to the top, which could not let Zhang Fan and Ma Yichen have a suitable position. The bottom of the stool is too high.

It can only be like a half squat horse step. Zhang Fan is better. He can transfer equipment, pick up and send electric knives, and can get up and change his posture, but Ma Yichen can't. He must half squat, pull the retractor and stare at his armpit.

Originally smelly, coupled with the horse position, Ma Yichen really regretted dying.

When Zhang Fan went to general surgery in the morning, he said that there was a small operation today. Who would like to go. Everyone scrambled to go. As a result, Ma Yichen acted the fastest and signed up first. Zhang Fan was also eccentric, so he chose Ma Yichen.

It turned out to be such an operation.

My aching thighs are getting tired and shaking. The upper lip still needs to block a little nose, and he has to serve Zhang Fan well under his hands. Really, Ma Yichen doesn't know whether he is tired or regretful. Anyway, the meeting began to be a little trance.

"Take care of this patient when you go back. You must be careful. If you don't worry about this place well, it will be infected."

Zhang Fan said as he began to pick up the scalpel and cut the skin.

Doesn't Zhang Fan feel smelly? It must be stinking. But before he went to surgery, he asked the nurse to put some perfume on his nose. When Chang fan wore perfume, the nurse was shocked. He looked at Zhang Fan unbelievable.

Zhang Fan is too lazy to explain that this woman is too gossip,

Thanks to preparation, Zhang Fan has no problem except that his thighs are a little sour.

The operation began.

Cut the skin with a sharp knife and gently cut a small incision of 34 cm along the skin pattern. In Chinese girls' armpits, it can almost go from one end to the other, while in others' armpits, this length is not out of the bottom.

The armpits of a hairy girl are like the chin of a bearded man. The hair is too thick.

"Don't use flat tweezers, use ophthalmic forceps. Are you in love, too?" When Zhang Fan was a single dog, he never asked whether others were single, because he was hit by a female classmate at school, and hit back at Wang Zipeng when he was in class. People have talked about objects since primary school.

So when others talk about this topic, Zhang Fan will flash away, but since he got married, Zhang Fan seems to show off again. If he looks wrong, he will ask, are you talking about the object and in the wrong state.

Ma Yichen rolled his eyes. "Master, hurry up. I'm going to pee. It's like being on the toilet. "

"Hehe, hold on, hold on!"

Zhang fanle smiled. People's happiness is actually very simple. When their career is successful and their business is booming, their sense of achievement is often greater than their sense of happiness. The happiness of adults is that they have it and others don't.

For example, now, in the words of Taoxin son, you can't feel the happiness of master.

Although sister Mao has a lot of stubble, this place is still tender meat after all. Gently everything, like a plastic film, has opened a hole. She says, laugh or laugh, and the operation is still very serious.

Cut the incision, separate the fat, and then you see a lot of sweat glands. How to describe this thing? It's like a row of cream peas. If people eat big meat, sometimes when they eat big meat, they will eat the meat. There is a small flesh pimple, round and milk white, which is the gland or lymph of others' humming.

In fact, sweat glands are similar to this, but they are more numerous and densely arranged.

If there is no red blood, this thing is like countless white eyes hanging in the armpit. Looking out, it still makes people stand up and sweat.

After opening the skin and revealing these small pimples and sweat glands, Zhang Fan began to remove them, "scraper, small scraper."

As a result, Zhang Fan scooped out sweat glands, bright red blood, slightly yellow fat, and small pearly white glands like children eating cream ice cream.

As like as two peas and a spoon, it's absolutely the same as strawberry pearl ice cream.

Ma Yichen looked, looked, and forgot that his legs were sour, and his Adam's apple didn't move up and down. He was not hungry, but spitting for refueling. When you feel nauseous and want to vomit, how can you make this action disappear as soon as possible? First, spit it out immediately and it won't happen once, or if you don't want to spit, swallow and spit with oil.

After digging for a long time, I almost filled the bottom of the biological tissue belt. No wonder the smell was so strong. Sweat glands were like full lotus roots and dug out lotus seeds. Many could be filled with a small bowl.

The name of biological tissue bag is tall. In fact, it is a hard plastic bag. It is slightly different from the file bag, but it is harder than ordinary plastic. There are many kinds of shapes, including large ones that can put down a person's legs and small ones. For example, the one Zhang fan uses now is even small.

How big is it? It's just like the thin plastic bag that people gave you when they used to make milk.

The itinerant nurse picked up the biological tissue bag and asked Zhang Fan, "Zhang Fan, is it for medical

examination or..."

"Don't send the medical examination, take it out for the family to see, and then send it to the biological waste treatment station."

"OK!" The itinerant nurse nodded. I went to my family with the sweat glands dug out.

Sometimes, when people curse, they will say that your nose is as good as a dog. The head nurse in the operating room is like this. Usually, when Zhang Fan has an operation, she has to come in for a turn even if she is busy. Although she doesn't dare to flirt now, she still has to come in and explain something to the nurses like the leaders.

If the operation is not busy, she will have a word with Zhang Fan, but today, the woman didn't come to the operation room.

Body odor is nothing before operation. When sweat glands are dug out, the serious odor begins.

Because to stop bleeding, some sweat glands are deep and cannot be completely removed, so we can only use an electric knife.

One drawback of this kind of operation is that it is easy to relapse, because the sweat glands are not cleaned. Moreover, this thing is different from hair follicles. When the hair follicles are damaged, it is just like a man who has hurt his heart. If they disappear, they will never appear.

This thing is different. It's like leek. If you don't dig it, it may still be born.

The most thorough way, in fact, is also simple, that is, cut off all the muscles around the skin with sweat glands, and then fill the skin in other areas. This is the most thorough, but also the most damaging.

So, sometimes, looking at advertisements, especially those in some fields, is it possible to cut down and never relapse? impossible.

In order to prevent the recurrence of yellow hair, Zhang Fan directly said to the itinerant nurse: "turn up the power of the electric knife. Turn up the power of the attractor. "

Just like stroking his arm to fight, Zhang Fan began to prepare.

"Master..." Ma Yichen blinked and looked pitifully at Zhang Fan. He knew that the master would be a disciple.

"Hehe, just stick to it and stick to it again. Men should have responsibility and be able to stick to it. If you don't bite your teeth and can't stick to it, how can you fall in love and find someone? Last time your father saw me, he asked me to introduce you to someone.

Come on! "

Zhang Fan said to Ma Yichen with a smile.

This is the difference between people. Some serious disciples of master dare not speak, but Zhang Fan is not. Maybe it has something to do with Zhang Fan climbing out of the mud pit. He knows that this position is uncomfortable and the smell is bad.

But being a doctor and having an operation, I have no choice but to bear it. In his eyes, Ma Yichen and his gang are just like children. Although Zhang Fan is not a few years older than them, it may be due to his old mentality or more experience.

Zhang Fan always thinks they are children. For example, Wang Yanan is a spoiled child in Zhang Fan's eyes.

## **Chapter 1092**

The itinerant nurse picked up the biological tissue bag and went out. The operation was not big, so she was not very busy. When she didn't need to do anything on the operating table, she hurried to find her family with a biological tissue bag.

In general, such things are the work of doctors. Because the cut-off is the doctor. The doctor should take the tissue to explain to the patient's family members what this is, what this is, what is normal, what has become, and how much we cut.

This is a necessary process of surgery, that is, the right to know of patients and their families. Although for ordinary people, it is a packet of meat. But anyway, this is an organ in the patient's body, so it must be explained clearly.

This scene is very strange. The doctor wears a mask and a white coat, then carries a plastic bag, points to the things inside and says, "come on, look, this is the patient's cecum?" As the butcher told the buyer, it was pork with ribs.

Itinerant nurses, relatively speaking, are a little older because of their rich experience, but their hands and feet are not so agile. However, this is also relative. In case of emergency critical surgery, it is often the middle-aged nurses.

Because most of the medical work is a job where practice makes perfect. For example, in general routine surgery, doctors who do more, such as general foreign doctors in China, do not say for a lifetime. In the total three years of hospitalization, his operation volume is almost the same as that of doctors in small countries.

Therefore, in the operating room, there are generally young nurses on the first floor and middle-aged nurses on the first floor.

The itinerant nurse took the tissue bag out of the operating room, put her head out of the automatic door of the operating room and looked out.

Because today is the operation day, there are many families of patients waiting outside the door. As soon as the nurse appeared, a group of Hula came up. It's really hard to wait. If your children are lying in the operating room, look at the bloody organs in the doctor's hand. Really, the parents' hearts are like cutting with a knife.

"Ordinary foreigners, nine beds, Emil's family."

Working as an old nurse in the operating room, her heart has long become hard. If it is not hard, there is no way. He pushed away a group of family members who surrounded him and began to shout at the top of his voice.

"It's like calling your friend's name again." Jia SuYue really couldn't listen. The vice president in charge of the women's Federation of the hospital complained to Shaohua.

To tell the truth, the non-medical technical departments in the hospital have a particularly low sense of existence. As the vice president in charge of trade unions, women's federations and logistics, like the handyman hired by the hospital, sometimes they don't notice the meeting. When it is clear that the position can be handled by a director or section chief, I don't know why I have to set up a non-medical personnel to be the president.

In the age of Lao Huang, many people stared at this position, because it was a good position. Apart from others, logistics alone was quite fertile. The hospital was originally a big waste, but not others. The small projects repaired every year can let the boss buy a Mercedes Benz for two years.

In the Ouyang era, although Ouyang was not tall and thin, he was full of anger, energy and vision. What people did was big projects. If they didn't do it, it was the building, so Ouyang contracted a lot of logistics.

But at least it's a little oily.

But in the era of Zhang Fan, the dean in charge of logistics said that he wanted to change his unit.

Zhang Fan cut across the canteen and labor protection. The canteen asked everyone to vote. As long as more than half of them opposed, they would change people directly. In fact, labor protection used to be to send washing powder, soap and towels, give female workers some small benefits on March 8, and give nurses some small white shoes on nurse's day.

Although there are only a few labor protection products, there are many special ones here. For example, Chinese businessmen are very good at washing clothes. For businessmen who sell washing clothes with tea, I can get you whatever brand you want. Anyway, it's still a package.

Therefore, when he entered the hospital, it was ten yuan. When he got it, it was estimated to be two or three yuan. After Zhang Fan became the master, he directly changed his way, stopped sending things and gave money directly. He came from a small doctor. He knows too well how annoying the doctors are.

In the new year, it is said that in order to help enterprises in difficulty, the vermicelli will be issued, but the vermicelli can't come out when they enter the pot. People who don't know still think it's boiled paste.

If other presidents do this, the resistance is estimated to be great. This thing has become an industrial chain, but Zhang Fan is different. Zhang Fan cuts everything he says, and no one dares to say. Even if someone doesn't like it, he pretends to be happy.

After all, even the tea vegetable boss is very polite to Zhang Fan. Can others not be happy? Therefore, this time when I heard that Shao Hua was coming, the dean in charge of logistics wanted to take the madam route so that he could have a better life.

But after talking for a long time, he also saw that he was not a family and really didn't enter a family. Like Zhang Fan, Shaohua smiled, but he didn't say anything. He didn't know when he asked.

Jia SuYue said that the female boss quickly got up and left, and Shaohua hurriedly got up and left, just like fleeing.

Three women hurried out of the head nurse's office and came to the door of the operating room " I am nine beds, Amir's family! "

The female boss didn't know what to do. She thought something had happened to her girlfriend. In a hurry, she didn't hold her voice down. The sharp female voice came out immediately.

"What are you doing so loudly? Don't you know this is the operating room? " The nurses in the

operating room are not very good tempered. She had a big voice and now dislikes others.

"Look, this is Emil's sweat gland. Take a closer look. There are only sweat glands. " The female nurse picked up the biological tissue bag and put it in front of the three women.

Especially the female boss, because she rushed fiercely and leaned in, she directly saw a bag of blood Hula wipes and something like fat or white greasy inside, because the nurse was a little fierce when she raised it, and there was just cut tissue.

Flickering, as if wriggling.

Uh!

The female boss covered her mouth and almost spit it out.

Jia Su looked over curiously, ER! Directly pinched his neck.

Shao Hua also looked over curiously.

Uh!

Three people almost cried with nausea.

In the operating room, Ma Yichen has cried.

He hasn't followed this kind of operation. Originally, he smelled the worst before the operation. As a result, he was too young. The bad smell was behind him.

The blood vessels and nerves of the human body are very smart. Where is it hidden, where is it safe, and where is it going through.

For example, in the armpit, there are many large blood vessels and rich nerve plexus. Once in martial arts, a punch under the armpit can make a person unable to lift his arm in an instant.

Therefore, some sweat glands are close to the big blood vessels and nerves. They dare not dig, but they will relapse if they don't dig. Therefore, in order to cut grass and root, Zhang Fan directly went on the electric knife.

Sweat glands, no matter how small, people are also glands. And in this gland, there are sulfide, chloride and various proteins. Therefore, when the electric knife is put on, the armpit is like the moment when the master sprinkles chili noodles when roasting mutton, and the white smoke rises in an instant.

The suction device didn't have time to suck, and a lot of smoke came out of the armpit. Because there are many important blood vessels and nerves in the armpit, Ma Yichen is a little close.

When the electric knife entered, he saw that the gland was bubbling like a red iron rod in a cold water bowl. It's like burning plastic.

Then an extremely unpleasant smell came.

This kind of taste is different from the taste of normal skin baking. To be honest, normal skin, when hemostasis with electric knife, is really similar to the taste of barbecue, but there is less mutton smell and cumin flavor.

This place, just like the nylon stockings of patients with beriberi, tastes extremely strange. There is a sentence in the textbook, which describes the pungent smell. No metaphor.

In medical teaching books, there are analogies to many smells, such as rotten egg smell and sour smell, which are more vivid. It is estimated that textbook experts can't describe this smell, so they get a pungent smell.

In fact, this thing is a mixture of burning plastic and smelly feet.

If the taste of sister Mao before the operation is the top, and the taste at this time is distracted, Ma Yichen washed it in, almost didn't give it to heaven, and his eyes began to blacken.

.....

Outside the operating room, Shao Hua and Jia SuYue helped each other and hiccup while walking. While hiccup, while wiping tears.

People passing by looked at the two beauties curiously. Because Emil's father appeared at the door of the operating room accompanied by government personnel, they left first.

As a result, just walking at the gate of the hospital, Jia SuYue asked, "your family Zhang Fan grabs this thing every day. It's disgusting enough to think about it! God, I'll never eat wangzi steamed bread again. " The result is not good. Once they say it, they are like pregnant!

Ordinary people feel worse and worse about the hospital. In the early years, because now many people feel that everything seems to be in line when they enter the hospital. Registration queue, check queue, take medicine queue, even pay money queue.

It seems that the hospital is getting bigger and bigger, but there are more and more people. Taking the elevator is like storming into battle. Moreover, the elevator in the hospital is particularly troublesome. Obviously, there are elevators, which can be kept below the fifth floor, and single and double numbers are separated. It's like being difficult on purpose.

To tell the truth, this is also a disadvantage of large-scale hospitals. After all, in China, the growth rate of

hospitals is definitely not as fast as that of cities. Often many patients or family members have been angry before they see the doctor.

If the doctor's attitude is bad, there will often be unfriendly scenes between the two sides. The state has also discovered this shortcoming and is now moving towards a large community and a small society. However, the emergence of siphon effect is hard to say in other aspects.

Light medical students, newly graduated medical students, who are not sharpened and die drilling into the third-class hospital. Because we all know that only when we go to the third class hospital can we gain both fame and wealth.

Large community and small society, it is estimated that the road is still far away.

Tea vegetable hospital also cooperates with the government in doing this work. For example, some doctors go to the community below. Unless you're really fooling around, you can't wait to go to the community hospital and bask in the sun every day. Otherwise, hearing that he was asked to go to work in the community, the male doctor often looked loveless, as if he had lost his male specialty. The female doctor was crying, as if he had been abandoned by Zhang Fan. The bitterness made Zhang Fan sad.

Therefore, we can only turn around. This makes most doctors happy. Whenever they meet the community, they make it like doctors go on vacation.

In the overcrowded hospital, Shao Hua and Jia SuYue are particularly conspicuous.

"Have you heard?"

"What?"

"Zhang Yuan's wife is pregnant ~!"

.....

In the smoke, the operation was finished. This kind of operation doesn't look very big, but it's very cruel. France's armpit seems to have been cut by a knife and burned back and forth with a soldering iron three or four times.

It looks particularly dark on the original white skin.

"Don't worry about it after the operation. Brake her two hands. This place is susceptible to infection. " Zhang Fan casually explained that there is no need to explain his own hospital.

Ma Yichen nodded his head as he walked like a fairy step.

The female boss doesn't know that her nightmare has just begun.

## Chapter 1093

Three points of treatment and seven points of nursing. This is not only for nurses, but also for family members.

For example, the ICU treatment fee criticized by everyone is often in 10000 units. It can be said that the nursing fee can account for a large part. The first-class nursing in the general ward doesn't have much money. The most nurses can do is take their temperature and be diligent. They will take a look at it more when they come over.

In order to generate income, many hospitals can give primary care for a few days as long as it is a patient. What is primary care? The first is to stay in bed absolutely and patrol for 15 minutes to half an hour. Observe the patient's thought fluctuation.

This is the general content of first-class care, but now, almost all patients have been treated by first-class care, but it is first-class care with a discount. Therefore, many doctors are not very clear about what primary care is. Anyway, there is a patient. It is absolutely no problem to give primary care three days ago.

Fortunately, primary care in ordinary wards is not expensive, and no one cares.

But it's different in the ICU. Nursing is nursing, and it is often special nursing. A specially assigned person shall accompany you for 24 hours, measure body temperature, blood pressure, urine volume and pupil at any time. Massage the patient every two hours, pat the back and suck sputum for five to ten minutes.

Such care, to tell the truth, even the patient's relatives can't do it. So in fact, the price of ICU depends on manpower and advanced instruments.

Many ordinary people resist ICU, but the rich tend to choose better.

However, although hospitals in China are also..., they don't want to live in the ICU if they have money. Therefore, when Huang Mao in France had an operation and their family wanted to go to the ICU, Zhang Fan refused.

It is not that the hospital is rich enough to extrapolate money, but because the beds in ICU can be described as resources.

Just do a rotten body odor operation and go to ICU. Zhang Fan thinks he will be laughed at. Moreover, ICU beds are often used to save lives. They prefer to wait for serious illness numbers empty, rather than use them for a little income.

Moreover, the weather has cooled down now. When there is another crop of cold air, many old people and women with heart disease and emphysema have to rely on ICU to continue their lives.

Recently, Zhang Fan heard Xue Fei complain in the office. When Zhang Fan was in orthopedics, Xue Fei and Zhou Chengfu were his superior doctors. But Zhou Chengfu had too many small Jiujiu in his heart, which finally led to his slight discomfort in front of Zhang Fan.

Xue Fei is different. He followed Zhang Fan from beginning to end. Sometimes when Zhang Fan was happy, he could claim to be Zhang Fan's senior brother. In the past, he ran to Zhang Fan's office more frequently. When he had nothing to do, he came to boast with Zhang Fan. He didn't leave empty handed. He either tossed Zhang Fan's tea or looked for Zhang Fan's good smoke.

Zhou Chengfu worried about his children. He worried about his mother-in-law. His college tuition was brought out by his wife's washing dishes in a small restaurant. In those years, this love was opposed by Xue Fei's mother-in-law's family.

I was afraid that Xue Fei would become Chen Shimei in the future, so Xue Fei's mother-in-law killed Xue Fei's house and smashed it. The uneducated old lady's ability to swear is not comparable to that of ordinary people.

Later, Xue Fei said good to his wife, but he didn't catch a cold for his wife's family. As my life has been getting better and better in recent years, I also have cars. It is still domineering 2700, and there are two houses.

But I never said anything happened with any little nurse, nor did I have an affair with the manager of any equipment company. At most, I played mahjong. Her wife's family is not good. Several brothers are of little promise. Before her mother was ill, several brothers scrambled for it. It's not filial piety, but that the old woman can take care of her children and do housework.

When the old lady was ill, the brothers who served her became enemies. The healthy old lady is basketball. Everyone scrambles for it. When she gets sick, she becomes volleyball. Raising children to prevent old age, but I didn't stop it. In the end, I still have to rely on my daughter.

Xue Fei's wife waited on him carelessly and touched him several times. Xue Fei agreed to let his wife

pick up the old lady to his house. Anyway, my wife has the greatest face.

The old lady has pulmonary heart disease. There is no good way. She doesn't dare to think about changing her lung. Cor pulmonale, this disease is very special. When it doesn't happen, it means that you hold your breath a little. But once you get sick, it's very troublesome. Moreover, this disease usually occurs at night.

Xue Fei was born in the Department of orthopedics. He didn't treat cor pulmonale before, so he didn't take it seriously. As a result, the next day the old lady came, she gave Xue Fei a section of internal medicine respiratory department.

At night, at three or four in the morning, Xue Fei had slept until his nose blistered. When he fell asleep, he felt as if there was heat on his face, and he was getting closer and closer. He suddenly opened his eyes and saw that Xue Fei was almost scared to wet his bed.

In the moonlight, he saw an old face crawling in front of him, up to five centimeters away. His toothless lips were sipping up and down, just as he was about to bite Xue Fei's nose off as a sausage. Really, Xue Fei was brave not to shout out.

Xue Fei's mother-in-law, from young to old, worked as a farmer in the mountains of Sanchuan. She suffered bitterly. The wrinkles on her face are like those carved by a knife. Moreover, when she gets old, the estrogen decreases and her skin color becomes darker and darker.

The most important thing is that he didn't sleep in the middle of the night, holding a small pillow in his hand and wearing black clothes, so he stood in front of Xue Fei's face. To tell the truth, Xue Fei couldn't sleep that night and had severe palpitations.

I'm lucky I didn't scare the shadow in my heart.

"What are you doing?"

"Who are you?"

This is the dialogue between Xue Fei and his mother-in-law at that time.

As his illness became more and more serious, Xue Fei's hair stood upright after his mother-in-law fell ill. What? Call her a traitor and Xue Fei a hooligan.

And she doesn't sleep at night. Sometimes she climbs all over the house in Xue Fei's wife's red skirt, just like Grandma wolf. She starts to change after 12 p.m.

Xue Fei's wife loves her mother and her husband. The husband didn't have a good rest at night. He had to have an operation the next day. He did a fearful job. Finally, the two discussed and took the old man to the nursing home.

Many people think it is unfilial to send the elderly to the nursing home, but sometimes, if you want to send the elderly to the nursing home, you can't have money because there is no bed.

Xue Fei is different from Zhou Chengfu. As soon as he saw that there was no bed, he couldn't solve it by himself. He immediately found Zhang Fan. Zhang Fan helped find someone to arrange for him.

In fact, this disease should be put into the ICU on the ventilator, but the conditions do not allow, so it's the only way.

Therefore, the beds in ICU are in class III hospitals. Although they are expensive, the beds are still quite tight.

Tea vegetable is a small place after all. Sometimes people with money may not be able to find caregivers. Because small cities are more likely to meet acquaintances, there are often many jobs that look shameless. If locals have a way, they won't set foot in them.

Therefore, the female boss can't find a nurse, and the golden haired girl doesn't want others to take care of her. The female boss can only do it by herself.

As a result, the nurse, the nurse, she was almost crying.

Because it is an operation on the armpit and lower body, both hands must be braked, otherwise pulling the incision will lead to poor healing, and the lower body should be kept dry. So the golden girl lived a life of being fed by diners.

Eating is nothing. The most difficult thing is to take over, because both hands brake. After taking over, you can only rely on others to scrub. After the female boss looked after her for a day, her face was green. Love degenerated immediately, and the female boss entrusted Shaohua to find a nurse.

Wipe your ass, wipe your urine. To tell you the truth, the female boss is crazy.

In hospitals, especially large hospitals, many things have become industrial chains, such as nursing workers. In large hospitals in big cities, many nursing companies give kickbacks to nurses in hospitals. As long as there is a suitable patient number, nurses will send information to nursing companies at the first time.

So, although it seems very simple, if you can't touch the doorway and want to open a nursing company, you probably can't even get a job. Whether it's nursing workers or registered cattle, blood transfusion teams and body transfer teams, they all have their own paths.

Moreover, this kind of business is often like seeing a doctor. Bargaining is not allowed.

This is still the most elementary, more advanced is not what ordinary people can know.

Zhang Fan finished the operation in the morning and was ready to talk about sesame oil with the golden girl's father. As a result, the leader of the discipline committee called Zhang Fan's confidential phone.

"Zhang Yuan, are you busy now? I have something to report to you."

The other party is a section chief and speaks politely. To tell you the truth, there are not many cadres who can make the public security organs and the law so polite.

Zhang Fan wondered, what did the discipline committee report to him? Normal people, few like to deal with public security, procuratorial and judicial people, and Zhang Fan is no exception. Although Zhu Bing and Zhang Fan are friends who have lived their lives, when talking, Zhu Bing's thief catching face and a pair of examining eyes annoy Zhang Fan, although Zhu Bing himself doesn't know.

However, listening to the other party's report and calling from a confidential phone, Zhang Fan is still a little uneasy. He doesn't say what he has done, but is afraid of something happening in the hospital. After all, he is a legal person.

Before long, several people in plain clothes came to Zhang Fan's office. It's really plain clothes. Just like people shopping on the street, they can't see any special points in their clothes. However, one thing you can see from your face is a bad expression.

"Hello, Zhang Yuan. This is Chen Rui from office 3."

"Hello!" Zhang Fan originally wanted to smile. After all, it was etiquette, but the other party looked like a creditor. Zhang Fan couldn't smile with a grin.

He asked several people to sit down. Zhang Fan wanted Lao Chen to come over, but he was stopped.

"Zhang Yuan, we came here this time with the consent of our superiors. We have some situations to report to you, but only limited to you."

The man surnamed Chen said as he took a report and handed it to Zhang Fan.

To tell you the truth, Zhang Fan doesn't want to see it. But I have to see it again!

Zhang Fan bowed his head and didn't say much. He picked up the document and looked carefully. The more he looked, the more his heart beat, the more he looked, the more hairy he was, and the cold sweat came down.

Because the document involved the hospital, some people broke the law. And it's not a small thing.

"What now?" Zhang Fan closes the document and asks Chen Rui opposite.

"Please bring the one on the document, and we will take him away without disturbing others. When I came here, the leaders of our discipline a committee also specifically explained to me that Zhang Yuan is an expert and it is right to be obsessed with technology, but we still have to manage where we should manage. "

Zhang Fan's hands were sweating. He nodded, picked up the phone and called the dean of logistics management " Lao Wang, come to my office! "

When Zhang Fan called, several people stood next to Zhang Fan, as if they were afraid of Zhang Fan informing.

Although the superior leaders did not express any dissatisfaction with Zhang Fan this time, the leaders of the discipline a committee took the lead. Although it doesn't matter to Zhang Fan, if this matter really needs to be discussed, it can be regarded as Zhang Fan's dereliction of duty.

Tea has a lot of minerals, and even a lot of precious metals. At that time, there were many local enterprises dependent on minerals because of the prevention of old maozi and inconvenient transportation. With the reform of these enterprises, there are good and bad.

In recent years, the tea vegetable government has a document to get rid of non-performing assets. At this moment, many people put their hands out. There are so many people staring at the mines that many people focus on these enterprises. As a result, some people ate too much and had an accident.

As a result, they were managed by the public, but are these people people who behave themselves and repent? No, they probably don't have the ability to dig a hole to get out of a prison, but it's a small matter for them to find someone to trust.

Then, several of them focused on the tea vegetable hospital, the only third-class Hospital of tea vegetable.

Ouyang is not easy to deal with. Zhang Fan is too clear, but some people are willing to deal with and others are easy to deal with. No, the vice president in charge of logistics was pulled down.

Zhang Fan is sweating because he is the person in charge of the hospital. He doesn't even know about such an event. This time, it's a small fight. What to do if something serious happens in the future? Therefore, Zhang Fan is more and more afraid.

Before long, the dean in charge of logistics panted into Zhang Fan's office. He greeted Zhang Fan with a smile and exaggerated wiping the sweat on his head with a box of tea in his hand.

Although Zhang Fan is young, he knows that this is a great God, so although the other party is about the same age as his son, he can show considerable respect.

When he saw that there were others in the office, he didn't say anything. He took the tea and put it on

Zhang Fan's desk, "this is the filial piety of my boy. I can't drink good or bad. I heard..."

Zhang Fan's head is big. Have I ever drunk your tea? It seems familiar, and it's still today.

However, before he finished his words, officer Chen interrupted him. Officer Chen had seen too many people, so he immediately interrupted each other at the critical moment.

"We are from the discipline a committee. Now please cooperate with our investigation. Please..."

With that, the dean in charge of logistics, with a bang, took off his hand.

## **Chapter 1094**

For ordinary people, it is a strange word. For the people inside the high wall, this is a super beautiful word.

Many people have many ways to get the word, because the tea vegetable hospital is the only top three hospital in the tea vegetable area. Although the later traditional Chinese medicine hospital is also top three, it is not a comprehensive hospital, so it is not the designated hospital of the prison.

But the people inside the high wall have all kinds of tricks in order to get external medical care. They are cruel, including swallowing toothbrush, iron wire and glass debris.

Some tried to get pregnant before going to prison. Really, there are a variety of ways to think of, and some can be called genius.

In the tea vegetable hospital, we often see several policemen with a prisoner in striped clothes and white steel shackles. Ordinary people, not to mention intestinal obstruction, even an appendix can hurt, with golden flowers in their eyes, nausea and vomiting, covering their stomach and unable to walk.

But often some people in blue clothes are very cruel. They hang iron wires in their intestines, and their painful faces have changed. They can drag iron shackles to go without saying. If they encounter curious eyes, they can look at them viciously.

Maybe the material is different. Anyway, it gives people an incredible feeling.

It's hard to describe the pain of swallowing nails. Maybe naughty boys have had similar feelings, such as

forking their legs and sitting on the horizontal bar, and then accidentally, maybe someone else pulled it, maybe the center of gravity was unstable, and suddenly, the steel pipe and meat and eggs crowded together.

We should squeeze together vigorously, and then the pain rises fiercely. This pain is different from the pain of broken hands and broken heads. Although the pain of broken hands and broken heads is also painful, it is much better than the compound pain of egg pain.

First of all, it was like pulling a tendon from the body. From the abdomen to between the two spans, all organs seemed to pull together violently for a moment, and then wanted to escape collectively. The tearing pain came, and then it was hot, just like boiling water directly poured into the body from the neck, which made the intestines stir together.

Swallowing toothbrushes and nails raw is definitely not a job that ordinary people can do. It's quite difficult to swallow even with iron tools such as nails.

And the people inside the high wall dare.

There are also pregnant women. Although they are young, they don't need men to show up for how to calculate the ovulation period and how to calculate the days of pregnancy. To be honest, careless gynecologists are not as powerful as others. As long as a little liquid is accurate, they can get pregnant without men.

Really, sometimes it's incredible to think about it.

In fact, their operation is to wait for the opportunity of external medical insurance. The simplest and most difficult thing to get is to directly issue a certificate of mental illness. Most people dare not think of the difficulty of this certificate, but it is even more difficult to enter the high wall.

If we talk about operability, other diseases are not too suitable, because it is difficult to resist re-examination, and diabetes is the most easy to operate, is not afraid of a review of the disease.

Therefore, in the early years, many people got out of the wall by relying on this disease. As for hypertension, although this disease is easy to operate, it is difficult to resist re-examination.

After the government issued the rectification documents, a group of tea moths began to sell all kinds of enterprises. Hundreds of thousands of scales can be sold for tens of thousands of yuan if they break down in a word. Electric furnaces bought by millions are sold at the price of scrap copper.

Many coastal bosses laughed and paid a little money to buy real gold. Then, these moths are not stupid. Smaller moths divorce early, divide property, and want people to return compensation after the incident. As a result, they came forward to check and found that they had nothing.

Bigger moths, more high-end, directly let his wife and children go to the neighboring countries to be visiting scholars. Sometimes think about Du te. It seems that a half-aged middle-aged woman who goes to stan university to be a visiting scholar can only speak Hala less, and those who open their mouth and shut up can only be 350000 or 80000. Is she going to exchange mahjong?

I don't know whether to visit or not. After some time, maybe Paris in Europe or New York in golden hair, people have become foreigners!

When these big and small moths entered the high wall, these people began to take a little money and deceive others. The dean in charge of logistics of tea vegetable hospital was the one who was fooled.

The Dean took the amount that the other party spilled like a small grain of rice, just as a thin dog rushed up to see the fat, and the demand was not high.

This operation is particularly simple because of the particularity of the inspector. Generally, they will find a separate blood drawing room. Although the logistics Dean is not the business Dean, he is also a leader. He goes in to say hello to the prison guard, give a cigarette, and then find a chance to replace the test tube.

If it weren't for the moth move, it would be a headless case.

Like the heart of the logistics director, when the other party showed his work permit, he knew that he had made a mistake, "Zhang Yuan, Zhang Yuan, help, Zhang Yuan, pull a brother, I just got some unqualified reagents, and when building the dormitory, I disclosed the base price to the builder, Zhang Yuan, help, I didn't do anything! "

Zhang Fan's head is big. Don't play with fire if you don't have any brain or courage. People haven't asked. Everything you should say or shouldn't be said is shaking up. But did someone else come for your trivial things? I don't know what he thinks.

Several young officers, unable to help themselves, set up this guy and walked downstairs. Anyway, they couldn't run away at the specified time and place in the future.

In the hospital, everyone talked about the logistics dean who was put up like a dead pig. Before long, Ouyang also killed Zhang Fan's office.

"What the hell is going on?" Ouyang's face was black. In fact, the old lady is not angry about the accident of the logistics Dean. It's all adults. What she wants to do and what she should do is his own business. Ouyang was angry that the organization didn't inform her. She was informed by Chen Sheng.

This makes the old lady very delicious.

"The logistics Dean took the money given by others and switched the urine and blood samples of the tester." Zhang Fan said obviously depressed.

"Does this brainless disaster involve the people in the laboratory and nursing department?" Ouyang looked at Zhang Fan's low mood and his voice was much softer.

This is the mood, she can understand. Even if ordinary drivers don't break the rules when they see the traffic police, they will also smoke in their hearts, not to mention the black faced discipline a committee. When a group of people show their work permits and speak honestly, the feeling of being on the scene is really not what ordinary people can feel.

"Fortunately, no one else was involved! Recently, don't think about it. It's a lesson. Remember, it's not enough to just bring people to make money and improve their technology. You should also take them to improve their moral cultivation.

Don't think the weekly party class is a waste of time. We must check it well. In a few days, we will sort out the management loopholes of the hospital. There is no best but better. Although I criticized you this time, it is also the leader's love and promotion for you.

If you don't care, if you don't care, you will feel that you will take away people so quietly? And even I didn't notice. You say, leaders love you so much, what else do you have to lose heart?

Isn't it just a criticism? When no one is negligent, I still have a lot of punishment. I don't think you want to lose the battle one day. Cheer up! "

Ouyang thought that the government had reprimanded Zhang Fan. He was deeply afraid that Zhang Fan could not bear it in his heart. Only then did he have the patience to suppress his anger and comfort Zhang Fan.

"I'm so young and severely criticized by the organization. Thanks to my mother, I came early. If I came late, the president of a third class hospital would cry in his office. It would be an accident."

Ouyang thought proudly in an instant. What she thought was right. It was really hard to let others reprimand on behalf of the organization for no reason.

Zhang Fan was stunned.

"I'm not depressed. I just think Lao Li usually looks at people and animals harmless. He always pays careful attention to the soles of his feet when walking. He's deeply afraid of stepping on something. How dare he be so bold?"

"If you don't feel bad, you can do it. If the leader gives you any punishment, if it exceeds the warning, I will make trouble with the government. It happened not during your term of office. Punish me if you want! "

Ouyang is like an old hen protecting her chicks!

"No, no punishment. Just a word, we should pay close attention to management and don't let go! Should we be punished? "

Zhang Fan asked in surprise.

"Well!" Old lady Ouyang couldn't get out of her throat at one breath. Her dark face seemed a little white, and then she stood up and left without saying a word.

The old lady felt a little ashamed, so she pretended to be angry and left.

Zhang Fan opened his mouth and Ouyang left before he finished speaking.

Ouyang, who felt a little ashamed, pursed his lips to water the cactus in the office. The cold wind from Siberia finally began to whine outside the window, and the weather was very gray. Just in October, the first snow of tea came as scheduled.

The heating of tea vegetable was opened in mid October, but the hospital burned itself. When the weather fell, the boiler of tea vegetable hospital began to burn. Many old men and women with senile diseases slowly moved to the hospital with changed clothes like migratory birds.

By the time Zhang Fan got off work, the snow had begun to fall. Snowflakes in late autumn are particularly wet and heavy, not as elegant as snowflakes in winter. The snowflakes in late autumn mixed with the rain that has not yet become solid, fall down like a mouthful of sticky phlegm, stick to people's faces and slip down, which is very uncomfortable.

Many Kazakhs and Mongols have begun to celebrate the winter festival of slaughter. Rich people kill a horse or a cow. Usually, people usually kill a sheep for the festival. Bayin is now a rich man. She and Xuefeng have a healthy life.

Bayin has a deposit in his hand. Xuefeng's beef stall is also angry. The couple discussed inviting people from the hospital to come home for the festival.

The Shaohua family also prepares some ingredients at this time of year.

The winter in the frontier is definitely beyond the imagination of the mainlanders.

Sometimes it's really impossible not to reserve some food materials. Often a heavy snow comes, the vegetable market closes and the meat stall closes. Therefore, Shaohua's mother and Zhang Fan's mother

also begin to cook some food with frontier characteristics.

Chrysanthemum eggplant is Zhang Fan's favorite. Although the autumn eggplant has been killed by frost, it has a lot less water. It is better to chew, wash it and steam it in the pot. When it is seven or eight cooked, take it out and put it under the vegetable board, press a big stone and press out the water in the eggplant.

Then hot sesame oil with mashed garlic poured on eggplant, a little vinegar, obediently eat more fragrant than meat.

Because Zhang Fan likes to eat, Shaohua's mother does a lot, and the family is busy.

Just when everyone is happy and ready for winter. The flu arrived as scheduled. What's more, not only the flu, but also hand, foot and mouth disease, like coming to the festival, followed the flu and killed tea.

Zhang Fan, who had a meal of chrysanthemum eggplant, was lying in bed at night chatting with Shaohua and talking about the logistics Dean of the hospital. Zhang Fan rarely told Shaohua about work, because Zhang Fan felt that some things he could bear, so he didn't have to tell Shaohua.

But today is different. Zhang Fan's heart is really shocked. How terrible it must be for a person to be scared into mud and paralyze on the ground.

Shaohua was also quite surprised. During the day, the dean of logistics also said to Shaohua that he wanted to invite Zhang Fan to dinner alone, but Shaohua smiled and didn't answer.

"Xin Kui, I left a heart and didn't say anything. God, real people can't judge by appearance!" Shao Hua patted his chest with his small hand.

Young men and women couldn't talk all day. They began to compete in Kung Fu.

In a county hospital called Hanggai around tea, a pediatrician is on duty. In a more developed city in the mainland, there are many top three hospitals in a county. After all, there are many people. For example, Humen in Yangcheng, no one doubts that it is a provincial city, but it is a town.

The county seat of tea vegetable, you say it is a town, sometimes it seems that it can't stand. Come here, just a big cross, and then go out of town. It's no exaggeration at all. Hanggai County, located on the edge of the grassland, is known as a city with blue sky. The sky is indeed as blue as a gem.

There are grasslands on one side and plateau lakes on the other. The environment is beautiful, but there is nothing to say about the economy. The economy is not good and can't support people. Every year, newly graduated students don't have to think about it after they get the doctor's qualification certificate and teacher's qualification certificate. They go to big cities without nostalgia at all.

In the county hospital of Hanggai, the pediatrician was a doctor pulled from the Department of

Gynecology, because there were four pediatricians. As a result, one gave birth to a child and one wanted to be transferred for the sake of activities. After the two college students made direct research, they didn't even want to leave the files.

The Dean couldn't stay by force. He had to pull a doctor from the Department of gynecology to be a pediatrician. Otherwise, pediatrics can't open the bolt. It's just the director of Pediatrics and the gynecologist. You're on duty one day and I'm on duty one day.

As a result, a child came in the middle of the night. She looked at it casually, thought it was a simple cold and fever, prescribed some antipyretic drugs, gave some antibiotics, and sent it home.

## **Chapter 1095**

Many times, doctors have two fears about diseases and patients.

The first fear is that patients who half understand and half don't understand often encounter patients who constantly question the more they encounter urgent diseases, as if Murphy's law is particularly obvious in doctors. The simplest is, for example, what causes atherosclerosis.

Most people don't have to think about it. They will say, eat meat, eat fat. In fact, it is not. Is fat the culprit of hyperlipidemia? According to the current research, frequent excessive eating of high-fat food will lead to hyperlipidemia. But is hyperlipidemia the culprit of atherosclerosis? No!

The people who hyped this topic in those years probably sold vegetable oil and hired a hot hand in the medical industry, so now they are getting fat. The pigs are getting thinner and thinner. They eat half a kilo of meat, at least three or two teeth.

It can be seen from the phospholipid rich composition of fat that the structure of this thing is particularly similar to that of the brain. Why is there an old saying in China that what you eat makes up what you eat? It makes sense. As long as people are not particularly fat, eating an appropriate amount of animal fat is definitely good.

Moreover, the most important thing is that excessive use of animal fat and vegetable oil will cause hypercholesterolemia. At present, there is no absolute evidence whether hypercholesterolemia causes cardiovascular disease.

However, in the 1960s, the Ministry of agriculture of Jinmao released a so-called scientific diet, which

uses vegetable oil instead of animal oil. It is called scientific diet. In fact, this is a gimmick of selling vegetable oil made by several local tyrants.

What causes arteriosclerosis is actually the local inflammation of blood vessels, which leads to scarring of blood vessels and deposition on the blood vessel wall. And inflammation is not caused by bacteria as we think.

Simple, for example, you say your girlfriend doesn't look good, and your girlfriend slaps you in the face. Then you feel that your face is a little burned, hot and painful. It seems to be swollen slowly. In fact, this is aseptic inflammation.

Blood vessels are the same. Why should we control high blood pressure? High blood pressure is like falling together and blood surging when you are sexually excited. In fact, it is just like the fan blood vessel wall of slapping blood.

And stable blood pressure will not attack the blood vessel wall. No atherosclerosis.

How can humans avoid arteriosclerosis? That is to eat, eat reasonably. There should be many kinds of food, and food should not be too fine, because only miscellaneous foods can supplement a large number of vitamins, especially vitamin E. this cheap and effective drug is what serious human beings should pay attention to.

Many people don't know how many kinds of food to eat in a day. This kind of balance is not eating bread with cream and chocolate cake. Even if there are two kinds, this is only one kind of carbohydrate. People eat about 11 different foods a day, they will definitely achieve a balanced diet. Keep this habit all the year round. If you want a second child at the age of 80, you may still be able to maintain your majestic style.

Moreover, the most important thing to pay attention to is that the two whites of food must be reduced, sugar and salt. This is the so-called pure white but fatal.

And atherosclerosis is eaten out of meat? No, when Zhang Fan was in college, there was an old man who didn't get an academian because of his age, but his two sons were all academicians.

Almost 90% of diseases start with inflammation and end with cancer.

The second fear is compound diseases. For example, a simple pneumonia is not terrible at all, but if the pneumonia is followed by a tuberculosis, it is a very troublesome thing.

If it is a simple ordinary influenza, it is not much terrible, because the history of human evolution, on the other hand, is also a history of disease screening. Like some people, they almost don't catch a cold all their life, and their living habits are like that. They still smoke and drink, but they don't get sick easily.

This kind of person is not his good physical quality, but the genes worn by his ancestors. But once you get sick and encounter a special flu, this kind of disease reaction is more severe than others. And often some people, sick all their life, catch a cold today and have a headache tomorrow. Anyway, they seem to be sick at any time.

Such people win prizes every time they get flu, but they don't react very badly. This is the result of screening. There are more people who are sick and less people who are not sick easily.

In fact, influenza is like a family with a large number of cousins. Probably one or two of them like waves come to the world every year. Some lazy cousins often hide in the bodies of animals that have not been lectured by humans.

Especially for some rodents and scavengers, the virus sleeps lazily in the animal's body. As a result, after greedy people eat it in one bite, bad things happen, which is equivalent to activating the virus. However, this virus often has no medicine to cure, and then becomes an infectious disease.

If the flu is in front of its cousins, it is a good baby, and the cold is a better baby in front of the flu.

Influenza is actually several conventional viruses, but they are not parasitic in the human body. This thing focuses on an epidemic, that is, infection. The cold virus is parasitic in the mouth and nose of the human body. It is not contagious. Therefore, if you have nothing to do, don't poke your nose. Wash your hands after poke. Don't suck in your mouth. Maybe you'll catch a cold after sucking a few times.

If you have a common cold, what is a common cold? If you don't talk about the concept, just say a simple identification. No one else has a cold, but you fight with your daughter-in-law and sneeze the next day, and your daughter-in-law is in high spirits. This is a common cold.

Remember, this disease can't be cured with medicine. You may take medicine for a week. If you don't take medicine and drink more water, you may recover in six days.

In fact, ordinary influenza is not terrible. The human body is still very powerful. What is influenza? Every autumn and winter, when you have a sister, you wanted to do something, but your sister has a runny nose. You can't do anything. You talk face to face without doing anything. As a result, you have a runny nose the next day. This is influenza.

At this time, don't take medicine indiscriminately. Go to the hospital and let the doctor treat the symptoms. What you need to do is wear a mask and don't infect your family

However, once mixed with other diseases, it is a fatal disease.

The number of cancer deaths, in the face of influenza, are too ashamed to be called the king of disease. The flu mixed with other diseases is a deadly existence.

For example, there was pulmonary heart disease, and the brain was disordered due to lack of oxygen. As a result, when the flu came, it was like a fish with its mouth open.

If there is tuberculosis, when the flu comes, the obscene tuberculosis hidden in the lungs will become arrogant in an instant.

This compound level is definitely not the difficulty of one plus one equals two, but the existence of quantitative change to qualitative change. That's why flu kills countless people every year.

Two pediatricians in Hanggai County didn't take the children seriously. After sending the children back, there was an accident in a few days. There were a large number of children with fever and cough in kindergartens in the county. When the director of Pediatrics looked, his eyes were green and his hands, feet and mouth came.

Then, a large number of elderly people caused by influenza were sent to the county hospital one by one.

Because the doctors of Pediatrics in Hanggai county did not report hand, foot and mouth disease at the first time, as a result, hand, foot and mouth disease appeared more or less in half of the tea vegetable kindergartens in less than a week.

The government directly ordered the establishment of the medical team, with Zhang Fan as the group leader, the leader in charge of health and Ouyang as the Deputy group leader, to start symptomatic treatment at the first time, especially the children transferred from Hanggai to tea.

For a time, people in the tea vegetable area were terrified.

## **Chapter 1096**

There are thirty kinds of notifiable infectious diseases. There are only two kinds of cholera and plague. After the discovery of these two diseases, they must be reported within two hours. If they are delayed and the epidemic situation spreads, it will be too late for doctors to cry.

Therefore, cardiologists can find respiratory doctors to take the shift, respiratory doctors can also find digestive doctors to take the shift, but infectious doctors can't find doctors in other departments, so they can only find people in their own departments.

It's not that doctors are afraid of patients in the infection department, but the sword of law hanging

overhead. After all, they are not professional infection doctors. Once they neglect one, it will cause a large area of infection. Obediently, it is the rhythm of being managed by the government.

When hand, foot and mouth disease spread out of Hanggai county and entered the tea vegetable urban area, it was like a donkey car suddenly turned into a small sports car on the highway. Relatives passed on friends and friends passed on friends. For a time, the government was so nervous that it didn't know what to do, because the disease hadn't broken out in tea.

But I'm still happy, because primary schools and kindergartens don't have classes directly. The children were as happy as they had been on June 1. Although primary schools and kindergartens were closed, the city was still affected. When a child is at home, he must be looked after by an adult, and then ask for leave. This is not the most important problem. The most important thing is to control infection and cure patients as soon as possible.

After several incidents, Zhang Fan's ability has been recognized by his superiors. In the past, the position of leader was either a big leader of the government or Ouyang, not even the leader in charge of medical treatment, but now it is different.

Zhang Fan has come to the fore. It can be said that we are comrades who have been tested and recognized by the organization and can shoulder the burden. Other things are hard to say. There are still a set of organizational arrangements for the investigation of cadres and important positions.

Before the appointment document was issued, the government first communicated with the leaders of the Health Bureau. Ouyang not only agreed with Zhang Fan as the team leader, but also specifically said that the fight against epidemic disease is like war, which must be ordered out. If Zhang Fan cannot be given the right to deal with it, it's better to let the leader in charge of health be the team leader.

Ouyang's suggestion made the leaders in charge of health stand up. This thing is not a good job. It should be done well, but if it is not done well, the problem will be big. He was not born in a medical major. He is quite timid about this kind of thing.

Therefore, this time, the government's leaders in charge of health and Ouyang rarely have the same opinion. The leaders of the government thought about it and agreed. There is no way to disagree. There are only a few experts in tea.

For Ouyang, people need to be trained, and talents need to be trained. If you don't walk in the fire and water three times, you can't become a talent. For Zhang Fan's technical character and self-restraint, Ouyang can't appreciate what he appreciates. Although Ouyang looks like a firecracker, she likes Zhang Fan to be so gentle.

This is like a joke in those years, saying that immortals give money of \$5 million, have extreme wisdom and a life span of more than 100. Choose one of three, which you will choose, and often choose what you lack.

The superior agreed, but Ouyang didn't inform Zhang Fan in advance. Instead, she ran to the hospital and waited in the office. She lost face in front of Zhang Fan a few days ago. Now she has to wait to save face, so she went to the office early and waited for Zhang Fan.

She is not a loser, and she doesn't know how her old man survived these decades. Ouyang was lying in front of the window with a watering pot in his hand. The cactus became a water lotus. She didn't pay attention, so she climbed in front of the window, looked at the gate of the hospital and waited for Zhang Fan's car.

Getting up in the morning, Zhang Fan rubbed his waist. The matter of essential oil has been settled with the old man in France. In the future, Shaohua's farm can trade directly with other companies without going through second dealers. Moreover, the old man in France is preparing to build a medical beauty factory in tea, which is said to be on a large scale. This is not Zhang Fan's worry. The old man wants to pull Zhang Fan in and give him shares for nothing, but Zhang Fan smiles and still doesn't want it.

Some things are like this. They are delicious and difficult to digest. Now it's not like before. It's unnecessary to lack money.

If there is an operation in the morning, Zhang Fan will never drink milk. Zhang Fan's milk in their neighborhood is specially supplied by the Bayin family's ranch. It is too pure. When they drink, the milk skin is thick like a layer of mask. The pure milk flavor, with a slight sweet smell, is absolutely not the belt Erie and the cow Mongolia energy ratio.

But Zhang fan can't afford it. He pulls as soon as he drinks and pulls as soon as he drinks. It's especially effective. However, it is not diarrhea. Many people feel diarrhea when they have diarrhea. The simplest definition of diarrhea is that the number of defecation times a day is greater than or equal to four times.

"My second uncle's grandson is ill recently. He just called to see a doctor in your hospital." Zhang Fan couldn't drink milk, so Shaohua made steamed eggs for Zhang Fan. Although this steamed egg is very simple, it's very difficult to get.

Zhang Fan did it once. It's like bean curd residue. It's not only not beautiful, but it's not very delicious when eating. But Shaohua's cooking is quite good. It looks like cheese. Put a little sesame oil when eating. It's really comfortable to get up in the morning and go down in a bowl.

Zhang Fan ate while Shaohua said.

"Is it serious?" Zhang Fan didn't lift his head. Several uncles of Shaohua's family seldom mentioned it because they were not very good to the elderly in the early years. Zhang Fan has seen it once or twice.

"Say it's diarrhea and fever."

"Oh!" Zhang Fan doesn't follow. This kind of thing, Zhang Fan doesn't speak easily. Not unkind, but feel unnecessary.

Zhang Fan doesn't know that hand, foot and mouth disease has broken out in the counties around tea. This is not because the hospital knows later, but because this disease is not treated in the hospital, but in the CDC and infectious disease hospital.

But the wonderful thing is that once they can't be controlled, the two units are like paralyzed. They can only rely on the local third-class hospitals. If the local third-class hospitals still can't, the hospitals of senior officials still can't, and the hospitals of the resident army should go up.

But before it happened, the CDC and infectious disease hospital would not report to the third class hospital. So Zhang Fan didn't know. He had enough to eat and drink. Zhang Fan quickly slipped away. Shao Hua is softer than her mother. Her uncles, Zhang Fan, have met and don't like them much anyway.

It doesn't matter whether you like it or not, but you can't say it. This is Zhang Fan's philosophy of life from primary school. Some things can be done, but can't be said. Some things can be said, but can't be done.

The tea element in early winter has begun to be cold. The surrounding Tianshan Mountains are already covered with snow. In the primeval forest, a large area of beauty pine has changed from green to dark green. The snow on the top of the mountain slowly continues to the dark green in the middle of the mountain, and then to the maple forest with red leaves at the foot of the mountain. Winding paths in the woods and wooden huts appear from time to time.

Really, it's absolutely beautiful and intoxicating.

Zhang Fan is not in the mood to see it because the city is too blocked. When he takes his eyes back to the city, it seems that he has returned to the mortal world again. The scolding of drivers on the road, the sound of loudspeakers and the jumping of passers-by make people feel like fireworks.

The old city of chasu city is not very large in the west, but it is still very powerful in terms of age. Not to mention Xi'an province for thousands of years, even the Kaka next door to tea has become for many years. However, tea is also small. The drooling pony greedy by Emperor Wu of the Han Dynasty was produced here.

The old city looks like the old city. The roads are narrow and there are many cars. People have a big temper. Zhang Fan regretted driving in the morning.

When he got to the hospital gate, Zhang Fan frowned. Because there are many cars blocking the door of the hospital today“ The flu broke out? ” Zhang Fan muttered in his heart.

On weekdays, although the gate of the hospital will be blocked, it is absolutely not like today. There are no less than seven or eight mounted policemen from the traffic police brigade. Zhang Fan raised his hand and looked at his watch. He was about to go to work. He had to hand over his shift today.

Seven or eight hundred meters, walked for almost half an hour. It is conceivable that the number of people who came to the hospital today. Zhang Fan came late. Ouyang's legs looking out at the window were almost numb. After seeing Zhang Fan's car, the old lady quickly put down the kettle and let go of the cactus like a flood.

He went back to his desk, picked up the documents he didn't know when, put on his reading glasses, pricked up his ears, and then began to pretend to be very busy.

In fact, the old lady hardly interferes in the affairs of the hospital now. So she hardly has any documents to be busy, but this doesn't delay Ouyang's busy clothes at all. Especially under the words behind her, Ouyang seems to be busy every day.

Zhang Fan parked the car and just went to the government building, Lao Chen jumped out of the corner like an old cat“ Zhang Yuan, the mixed outbreak of hand, foot and mouth disease and influenza. ”

With a letter from the Health Bureau in his hand, Lao Chen walked to Zhang Fan in a few steps.

"Really special, good does not work, bad does not work." Zhang Fan secretly scolded.

As a result, Zhang Fan looked while walking.

"Take the time to inform Pediatrics, respiratory department, infection department, and then all doctors on leave and those who spend time in the community return to the team. If there are special reasons, they must explain to me in person. Add pediatric clinics, and all pediatric experts at home go to the clinic. "

As Zhang Fan walked, he began to give orders.

"It's estimated that it's not enough. There are too many outpatients in a few days. It was originally for these children and patients to go to the infection hospital. It's OK for adults to say, but once the parents of those children listen, they let their children go to the infection hospital. It's noisy and almost demolished the outpatient hall. "

Lao Chen said bitterly that he had already reported this matter to Ouyang in the morning. Ouyang just

said, "go to your Zhangyuan. It's all right. Don't bother me. " Lao Chen doesn't know what happened to Ouyang. In fact, he delayed Ouyang's posturing.

But I dare not tell Zhang Fan about it. Once you say it, you become a villain.

As soon as Zhang Fan listened, he slowed down slightly, "didn't anything happen?"

"No, I'm excited. At most, I just yell and scold. There's nothing else."

"Inform president Ju and let the doctors from the second and third hospitals come together. Now, the more anxious we are, the more we should calm down and avoid any panic. If we panic, those parents will be even more discouraged.

And don't stop everyone from going to the infectious disease hospital. Separate the normal outpatient department from the outpatient department of pediatric respiratory department and digestive department. Don't cross infect. Do a good job in hand disinfection and release the hand disinfectant in the warehouse. It's better to let someone take it than leave it empty. "

"OK! I'll go now. You need to sign this document. I'll send someone to the Health Bureau later. "

"The European Academy didn't come?"

"Coming!" Chen Sheng lowered his head and said.

"Don't you just give it to her directly? It's so busy that someone has to send it. What's this called?" Zhang Fan's mood is slightly bad, and his tone is not very good.

The government has a regulation. For example, the documents signed by the head of the county bureau must be picked up and sent by a specially assigned person, and cannot be faxed or mailed. Therefore, sometimes, the fart big thing, also want to go out in person, but can't go through more convenient things.

Usually, Zhang Fan never said anything in this regard, but today he was in an epidemic situation, so he took it out of his anger.

When Zhang Fan came to the office, he had read the documents once. When he saw that he was the team leader, he was a little surprised.

I wonder why he became the team leader.

Zhang Fan has presided over many large-scale rescue and disaster relief, but he has not presided over such a thing.

Rescue, disaster relief and anti epidemic, although they are very urgent, they are so urgent that they

burn their ass. But these three things are absolutely different.

If you can do a good job in rescue and disaster relief, you may not be able to do a good job in fighting the epidemic.

He is really inexperienced in this field. Although a flu and hand, foot and mouth disease seem to be a little brother in a class B epidemic, the mixture of these things is really fatal.

Therefore, Zhang Fan didn't even enter his office. He took the documents and went to Ouyang.

Hearing Ouyang's voice, Zhang Fan directly opened the door and went in.

"Dean, I didn't lead the anti epidemic event, but this time it was a combined outbreak of influenza and hand, foot and mouth disease..."

"What's the hurry? What's the hurry? There's nothing safe. As the president of the third class hospital, you're worried. What do you say about the parents of those children? The medical treatment in the tea vegetable area is in your hands now. What's your hurry! God, it won't fall! "

The old lady has been waiting all morning, just for a while. The glasses hanging on the bridge of her nose are particularly bright.

Zhang Fan said Chen Sheng and Ouyang said Zhang Fan. They all operate in the same way. It's really like coming out of the same mold.

Zhang Fan was stunned. Ouyang put down the document and then said to Zhang Fan, "our generation is old. We don't expect you or who. Can't we even find a doctor after I retire?"

"Is this a matter of seeing a doctor!" Zhang Fan tilted his mouth, but he didn't speak.

Xiao Chen tried to hold back his smile and poured Zhang Fan a cup of tea. Then he closed the door of the office.

## **Chapter 1097**

In the outpatient hall, Chen Sheng set up an outpatient service with a group of people. There were only six outpatient services in the pediatric outpatient service. Chen Sheng moved other departments around. In an instant, the first floor became a pediatric outpatient service. All the doctors who were on vacation and went to assist the community were called back.

For a time, the third floor of the clinic became the world of children, crying, shouting and screaming, accompanied by the coaxing and bluffing of parents, as well as the complaints of grandparents. The

third floor was as lively as a bazaar.

Pediatrics is like this, and the respiratory department is even worse.

The respiratory department was originally a large department, and in all the top three hospitals, although the respiratory department does not seem as urgent as cardiology, nor as tall as surgery, and there is no income such as stents, the respiratory department has a lot of income every year.

This is a high investment and high return department. As soon as the bedside ventilator is turned on, the money flows into the hospital like the clattering Yellow River water. It's no exaggeration at all. Otherwise, if you look at the private respiratory hospitals in Jiangsu and Zhejiang, the large-scale ones are almost larger than the third-class hospitals of some senior officials.

Moreover, this kind of department, a certain field hospital does not dare to intervene. Money is money, but they have no scientific research reserves.

If pediatrics is a noisy ocean, respiratory department is the sea of death. Hold your breath, hold your breath, dry and thin old men and women, one hand covering the mask, the other carrying an oxygen bag, and the family calmly lined up with various test sheets to wait for the doctor.

"Old man Li is here again! Pay attention, everyone. Don't quarrel with him again. It's not easy for others. You look at your face. It's eggplant color. Let's be careful. Do you know?" The head nurse of the respiratory department arranged an extra bed. When he saw the familiar sound and shadow in the corridor, he explained to the nurses under his hand.

Respiratory patients, although thinner than one, can be more angry than one. If they can catch two breaths, they will definitely hear quarreling with others. Really, they will quarrel again or on the way to quarrel.

In the corridor of the respiratory department, you have to walk sideways, because it's all extra beds. In this way, many patients can't get in. Old patients generally have experience. They come to the hospital and enter the ward early before the weather gets cold.

The new patient doesn't understand. When he gets sick, he can't even find a bed.

"Li Hui, Li Hui, hurry up, old man Wang can't hold it. Hurry up, people are dying." The nurse who closed the bed shouted to the doctor on duty today.

Li Hui, who has children, has completely changed. People who used to jump off like that are now as stable as they have been transformed into a high wall.

Hearing the nurse shouting, Li Hui let go of the keyboard and ran towards the ward.

When the first snow falls, the tea vegetable hospital represents the busiest time.

Zhang Fan calms Chen Sheng. Although Chen Sheng is busy, he is not timid.

Ouyang is reassuring Zhang Fan now. To tell you the truth, the most terrible thing in this industry is to encounter a large-scale epidemic, which is much more terrible than difficult and miscellaneous diseases.

To lead doctors to deal with this kind of thing, to tell the truth, Zhang Fan has no bottom in his heart. He is not afraid, but worried.

When there is no flu, the common cold can be cut like wheat every year in this season. If there is a big outbreak of flu and a hand, foot and mouth, to tell the truth, it is laymen who don't worry.

"I just read the documents. Now primary schools and kindergartens are closed, and children have appeared in many counties and cities. The peak has not come yet. I have no bottom in my heart." Zhang Fan said something in front of Ouyang.

"Everything must have a first time." Ouyang took off his eyes and said something to Zhang Fan.

"But it's different this time." Zhang Fan is a little worried again.

"Why is it different? What's different? Hand, foot and mouth disease has been found for many years, and the treatment schemes are mature. In 2003, did you think I had a bottom in my heart? The army sealed the border and the armed police surrounded the hospital.

Many of our doctors have written medical orders. Who had a bottom in mind at that time? Why is Lao Ju so arrogant? He's so bullish. He's happy to see the tea vegetable leader shout. He's not happy to shake his face and leave. Did he have a bottom in those years? No bottom.

What is a doctor? A mature doctor grows up in repeated dangers and unknown diseases. If he can only see mature diseases, he is not a doctor, but a craftsman. Does a craftsman need such painstaking training by the state?

You can't afford to practice your tolerance now. What will you do if there are more terrible infectious diseases one day in the future. My comrade brother, be prepared for danger in times of peace. We are

doctors and we are a special industry. The number of lives under the hands of a famous doctor definitely exceeds that of a general! "

Zhang Fan looks at Ouyang. The morning sun shines into the office. Zhang Fan seems to see the old lady's teeth shining.

In a few words, Zhang Fan felt as if no one would save the world without him. My heart is a little hot.

"Yes, what are you afraid of? They are all mature schemes. What's terrible when diseases are mixed? If I don't, if he doesn't, who will! " He thought.

The older the Jianghu, the less courage. Zhang Fan didn't feel this before, but now he realizes the meaning of this sentence more and more.

Because human life is not a number, especially when doctors in the front line are faced with one patient after another falling down, they can't be soft, because people are soft, they have weaknesses, and when they have weaknesses, they are easy to fall down.

It's like that when a man gets old, he is often picked up by his wife. It's not that his wife's temper has become bigger, it's because

"I also know it's a little special this time. It's difficult for the two diseases to break out together, but the more difficult it is, the more people can exercise. Lao Ju and I will help you. The government is fully cooperating. You can rest assured and do it boldly! "

Really, the old lady stood up and waved her fist. Her triangular eyes were too drum dancer. The old lady was definitely good at encouraging people.

Zhang Fan nodded and Chen Sheng said, "OK!"

When this good word was said, Zhang Fan had an impulse in his heart.

It's like the iron blooded death squads drank the last bowl of decapitation wine.

This feeling is not felt by ordinary people, and it's best not to feel it.

"Good! That's right. Let's start deploying now. The medical resources of tea vegetable are in your hands at this time. "

Ouyang added another fire.

When he went out, Ouyang deliberately walked behind Zhang Fan.

Annie used to take the bear, but now she has changed the formula.

Before long, the director of the chasu regional CDC rushed to the conference room, Lao Ju also rushed back, and the government leader in charge of health also came to the conference room. When Zhang Fan and Ouyang entered the office, the originally noisy conference room was much quieter.

"Zhang Yuan, European Court, the situation is more serious." At this time, the director of the CDC's head was as big as a bucket. It was like being stung and swollen by wild bees. There was no sound of scolding in his heart.

Director of the CDC, to tell the truth, this position is really a good position if there is no outbreak of infectious diseases on weekdays. One day, it is arranged to give injections to drug addicts and AIDS patients, then give preventive injections to children, and then give rabies vaccine to dog bites.

Then wait for the state to allocate funds. If you have a wide range of channels and arrange several paid preventive shots a year, it is definitely the rhythm of one suite a year.

Although the vaccination doesn't have much money, Kesheng has a large population base. An enterprise manufacturing free vaccines is rich and doing private helicopters. It can be imagined how much money this industry has to make.

But once there was an outbreak of infectious disease and it was not handled in time, the end of the epidemic was when he changed his position, and some were even dismissed immediately at that time.

Therefore, it is also a high-risk and high reward position.

At this time, the director of the CDC was as sad as a dead mother. Because not long after he took office, an infectious disease broke out, and he didn't control it. He really lost a lot, but now he doesn't dare to take it lightly. Dismissal is small and accountability is big. So now he is more anxious than anyone.

Zhang Fan nodded and looked back at Ouyang. Ouyang, like his secretary, kept silent. The old lady has really used her heart to cultivate Zhang Fan. This moment is often a highlight moment for others, but now Ouyang can't help talking.

"Summarize the situation first!"

Zhang Fan sat in the leadership position. China pays too much attention to things that are not regular in name and not suitable in speech. Zhang Fan did not speak, and several other leaders did not speak. Even the leaders in charge of health were silent.

He also knows that he will be a helper today. Just listen to the command. He has lost his confidence in controlling the medical unit of tea.

Earlier, there was an Ouyang who quarreled with the gongs opposite him. At that time, there was no way to take Ouyang. Now Zhang Fan got up again. Although Zhang Fan didn't quarrel or make trouble,

he couldn't help it. He was also very upset. He had a good health, culture and education tour. As a result, he was forcibly cut off by others, or by his so-called subordinates. There was no place to complain.

"Now, with tea as the center, more or less cases of hand, foot and mouth disease complicated with influenza have appeared in surrounding counties and cities, especially in nurganjiang kindergarten in Hanggai County, more than 20 children have herpes successively, and even three patients have aseptic meningitis

Moreover, at present, due to the combination of influenza, the number of patients with respiratory diseases has increased significantly, and even the elderly in the positive community have collective flu symptoms... "

Hand, foot and mouth disease was first discovered in Jinmao country in 1969, and the first case appeared in China in 1981. In 2008, it broke out in China. At that time, it spread all over the provinces of the country. It is estimated that there are friends with absolutely profound images.

The disease can be divided into two types, that is, it has two sister strains. One is simple and often breaks out, while the other does not break out often, but once it breaks out, it is absolutely more powerful than a simple strain.

This disease can be transmitted not only from the digestive tract, but also from the respiratory tract, especially in young children.

Often many parents stare at their children to wash their hands, but they don't wash their hands. This is useless. Although adults are not easy to infect and can be easily carried, when this disease breaks out, both adults and children should wash their hands well.

"Has the government's materials been in place now?" After listening to the report of the director of the CDC, Zhang Fan then asked about the government.

Without materials, everything is on paper. It is regarded as a thermometer that people usually don't care about. It doesn't seem very strange, but once everyone buys it, it will definitely become out of stock.

"At present, the government has mobilized a large number of medical equipment and medical materials, and disinfectants such as hydrogen peroxide have been stored." Report to your subordinates. The leader in charge of health of tea vegetable estimated that he was definitely not a person who fasted and chanted Buddhism in his last life.

## **Chapter 1098**

The pace of the meeting was very fast. After almost all the reports, Zhang Fan began to deploy. It's not urgent. The specific death rate of influenza is still a rough figure, but the death rate of hand, foot and mouth disease is clear, 3%. It doesn't seem obvious, but only if it's a child.

With Zhang Fan's order, first of all, professional epidemic prevention personnel entered kindergartens and primary schools with disinfection supplies for the first time. Hand, foot and mouth disease is resistant to alcohol and even disinfectants such as weak acid and deoxycholate.

But it is particularly sensitive to hydrogen peroxide, that is, hydrogen peroxide and potassium permanganate solution, so for a time, the taste of tea and hydrogen peroxide seems to permeate the air. Especially in the crowd gathering area, wash your hands before entering the door, and bottles of hydrogen peroxide were sent to various units and schools.

The main battlefield is still in the hospital. Pediatrics has been busy. The outpatient nursing department has asked for help. Zhang Fan had to transfer nurses from various departments. At this time, it is really like war. When the order is issued, we must travel at the first time. There is no opportunity and time to find excuses and reasons.

With the outbreak of influenza and hand, foot and mouth disease, many elderly people in their families began to be nervous. Often, the elderly activity center without a community is an information release center, where retired elderly people chat with each other for a short time.

"My daughter hasn't been home for three or four days. Now the municipal hospital is like a prison. She doesn't even agree to ask for leave. The original agreement to go on a blind date is ruined again! If I really want to delay my girl into an old girl, I'll go to the tea vegetable city hospital to find their president Zhang Fan. He married himself and left everyone else alone? "

In a community, an old lady playing mahjong was touching cards, showing off or complaining about her girl. Her girl was a pediatrician in the tea vegetable hospital. In the past, many grandsons of old men and women asked her to find her girl. Therefore, among a group of old men and women, this woman still had a position.

Chinese old men and women play mahjong. This Kung Fu is not ordinary. Anyway, as long as people are not dead, they can call friends to play mahjong. Earlier, there was a joke about the leaders of the golden Maoist state visiting China.

He ridiculed the Chinese leaders and said that your aerospace technology was still not good. He sent people to heaven, only one person. Look at us. We'll give you a pile as soon as we get it.

The Chinese leaders smiled. It wasn't our poor skills, but we didn't dare to send too many people. They could play chess, send three, they could all be landlords and send four. They just played mahjong. So I have to send someone to heaven! Although it is a joke, we can also see the Chinese people's heart of mahjong.

Other old ladies boasted about each other's girls with a little flattery. In passing, an old lady asked, "is your girl busy working overtime because of the recent outbreak of infectious diseases?"

"Who said no!"

"How to prevent it? Did your girl tell you?"

"Why didn't you say that you should wash your hands more, wash your hands with the August 4th movement, mop the floor more and disinfect more. Use whatever disinfectant you have at home. " The old lady and the girl said wash your hands more and go out less. The old lady adjusted what she wanted to listen to and wash her hands more. As for the back, she added it all by herself.

He who speaks speaks casually, and those who can hear are attracted to him. Then many old ladies went home, rolled up their sleeves and began disinfection. There were even a few old ladies, no matter thirty, seventy or twenty, who poured all the disinfectants in their house together and said, look, I won't kill you, look, I won't kill you.

Then, I don't know whether the virus was killed or not. Anyway, their family almost reimbursed. Disinfectants are generally not weak acids or weak bases, or complexes or oxides. These things can't be mixed together. If they are mixed together, they may produce a 66.

This thing is deadly.

Tea vegetable people were in panic. Stan country next door also came to join the fun. While eating melon seeds and watching the excitement of China, they also sent a diplomatic letter to tea vegetable through diplomacy, which means that they are very concerned.

The leader transferred the diplomatic letter to Zhang Fan, which means to let Zhang Fan look at it and reply in professional language. Zhang Fan was so busy that Gu Peng ignored the end, but the Secretary of the leader brought this thing again. He was very angry. He looked at it and threw it into the arms of the Secretary, "it's none of their business. There's no time to deal with these things."

Then he shouted to Lao Ju, "Dean Ju, quickly dispatch some doctors to Hanggai county. It must be a

strong general. You'd better lead the team in person. "

Lao Ju is the deputy team leader and the deputy team leader of the front line. In terms of tea, in terms of anti infectious diseases, those who infect the hospital are not Lao Ju's opponents. After all, Lao Ju worked on the virus in the front line of SARS that year, so he has rich front-line experience.

Lao Ju took off his mask as he walked towards Zhang Fan. "The flu patients in the surrounding counties have poured into our hospital. Now they are redeployed, and the pressure here is even greater."

"No way, there are not enough professionals in the county, and the county hospital can't work normally. We must take them to work in the past, otherwise, the source of infection can not be controlled, and there can only be more and more patients.

I can't give you too many people. If you bring five doctors and ten respiratory nurses, you can work in two shifts. Please this time. You should not only be responsible for the main treatment, but also be responsible for the prevention of sudden illness! "

Zhang Fan's burden on Lao Ju is not light.

Lao Ju nodded, "OK, I'll pick someone now and start immediately." I don't talk much. I say more and less. In fact, they are almost the same. I still have to go.

Lao Ju dispatched some doctors to hang Gai county with flashing lights, and there was even a shortage of people on the tea side. Almost all the physicians after work have become doctors in the respiratory department. Even Zhang Fan patrols the two departments of Pediatrics and respiratory department with masks.

In the past, the leadership was not there, but it's actually the same, but now it's different. Even if the leadership is there, the doctors are willing to press the heart's intolerance to work and contact the patients, for fear that the doctors are working hard, but the leadership is

Pediatrics is disturbing. Children don't pretend to be ill. They are already uncomfortable. When they come to the terrible group in white, they become more noisy. Doctors are now one by one, just like the black hearted bandits, no matter how badly the children cry.

First pinch open your mouth to see if there are throat and oral herpes. Because once there is herpes, there will be oral and throat pain, which will lead to children's refusal to eat. Once this happens, they must be treated in isolation and do oral care. We must not be careless.

This kind of herpes is not one or two, especially obvious. When there is herpes, pinch open the child's mouth, and you can see that the pink mouth and the bottom of the small tongue are densely covered with red herpes as the size of pomegranate seed, and the herpes is wearing a gray pus hat one by one.

It can be said that when herpes surrounds the throat and the child opens his mouth, it looks really

terrible. With the peristalsis of oral muscles, red herpes fluctuates up and down, just like insects crawling in the mouth.

Really, the children are very poor at this time.

Parents are broken at the sight.

At present, there is no effective preventive needle and no specific drug treatment for hand, foot and mouth disease. The disease itself is not terrible. What is terrible is its complications. Once the symptoms become serious, there will be abnormalities of the nervous system and failure of the circulatory and respiratory systems.

And this time, even more troublesome, this thing came with the outbreak of influenza.

Some children are suffering from herpes and influenza, which is even worse. When crying, they are weak. When they meet the pacifier, their small head swings vigorously, and their small hands refuse weakly.

Isolation, symptomatic.

Infectious diseases, like the force in physics, have three elements.

To control infectious diseases, we must cut off one of these three elements.

The three elements of infectious diseases are the source of infection, the route of transmission and the susceptible population. As long as one of these three factors is cut off, transmission can be stopped.

The source and route of transmission are the most difficult to control. Let alone find the source, your wife hides RMB. When your husband can't find it, let alone find a living man.

The route of transmission is not easy to control, such as hand, foot and mouth disease. The route of transmission is the digestive tract and respiratory tract. How to control it?

Therefore, we can only start with the susceptible people first, and then slowly ponder over the other two items.

Fortunately, there are not many critical patients in pediatrics,

But the respiratory department, which looks like the dead sea, is really like the dead sea at this time.

"Zhang Yuan, the ventilator is not enough." Zhang Fan was in pediatrics, helping to appease parents and deal with patients. At this time, the deputy director of respiratory department called.

Zhang Fan had to put down his child and rush to the respiratory department.

## Chapter 1099

If the uproar in pediatrics still represents the vitality of children, the respiratory department is completely suffocating. Many old men and women hold their faces like frozen eggplant, their lips like purple lipstick, and they can't see a little vitality in their eyes.

It's as thin as a stick, but the chest is round like a bucket. It takes a lot of effort to take a breath, which is still slightly stable. If you encounter a mouthful of sputum, it suddenly blocks up in the trachea, and you can't cough out. Under it, the sputum sticks to the mouth of the trachea.

Then the patient suddenly wanted to be pinched by the neck, his hands danced violently, and his whole body twisted violently on the bed like a maggot. The eyes suddenly protruded, as if they were about to fall out.

The feeling of dying derived from a strong sense of suffocation is absolutely like purgatory. The elderly in the respiratory department often experience this torture many times a day. They don't have much energy and spend almost all of it in struggle again and again.

Really, the feeling of suffocation is definitely beyond the imagination of ordinary people.

"Zhang Yuan! Several patients are obviously suffocating, and there are already indications for cutting the tube." When the deputy director of the respiratory department saw Zhang Fan, he hurried over.

The respiratory department used to be a quite different department in the tea vegetable city hospital. Under the leadership of the old residence who protects the calf, the steady Kazakh English flutters in the Department at the morning meeting every morning. Many patients lie on the glass wall and look at a group of doctors in white coats like chanting scriptures.

Lao Ju is not only familiar with various local relationships, but also has a good way in several specialized respiratory hospitals in the capital. After all, they lived and died together in those years, so doctors and nurses in the Department revolved around Lao Ju.

The good name of Laoju is not good for profit, which makes the departments unite as an iron plate. Zhang Fan, the doctor who loves money most in the tea vegetable hospital, was the teaching teacher of

the respiratory department. If he didn't have Laoju, he would have lost his job.

This department has obvious disadvantages, but its advantages are also obvious. In the hospital, the number of papers published by their departments in core journals is the largest in the hospital. Moreover, the doctors and nurses in this department are the most practical.

There are 60 beds in the Department of Cardiology. If you add 80 beds, from the director to the doctor, from the head nurse to the nurse, they all sigh and complain to the dean in turn.

But there are 60 beds in the respiratory department, and there are 100 extra beds. The doctors and nurses in other departments seem to be all right. The Department has obvious characteristics of old residence, with a sense of perseverance.

Deputy director of Tajik nationality, everyone calls her ayguli. This name is abbreviated in Chinese. If you shout it out, it doesn't look ordinary anyway. The signature plate left by others in the medical office is also ayguli. There are many ayguli in the municipal hospital, including nurses. However, generally everyone calls her director A. she will never be like the old house. She will emphasize that she smiles and nods every time, as if she is very shy.

Although she is over 40, she is still very beautiful. Looking at the photos of her youth, she is a little like the female prosecutor in Ukraine. She is obviously different from Lao Ju. Lao Ju is like a proud peacock.

Director a is as low-key as a little transparent. In fact, whether it is oral English or written English, it is much better than that of the old residence. People can account for more than half of the credit for the papers published by the Department, but they don't protect the calf as much as the old residence, so the prestige of the Department is still not as high as the old residence.

Hearing what ayguli said, Zhang Fan asked, "is the situation very bad?"

"Well, blood gas analysis showed type II respiratory failure, and our bedside ventilator was not enough."

"Seriously transferred to ICU."

"There are no beds in ICU!"

As soon as this is said, Zhang Fan has no choice. Other departments can think of ways to add a bed or something. Anyway, there is heating in the aisle. But ICU can't. ICU is like a radish and a pit. It's useless to add beds alone. The most important thing is that you can't add auxiliary instruments because there's no extra.

Just a few words later, the nurse shouted, "old man Li can't do it!"

Zhang Fan was stunned because he was not familiar with patients in the respiratory department. And Ayguli has turned and started to run, and Zhang Fan closely follows Ayguli's footsteps. The extra beds all over the corridor can't run smoothly.

In general surgery, there are few such names. A few beds are just a few beds. In internal medicine, especially in departments with many elderly patients, many patients are familiar with doctors and nurses and can't be familiar anymore. They will report on time every year. If they don't come this year, they will not come again in the future.

Therefore, the relationship between such patients and doctors and nurses is very special. For example, a patient in his 60s began to go to the hospital and died in his 70s. After more than ten years, when he left, although the heart of doctors and nurses was as hard as steel, it was still hard to feel.

Often, several doctors get together and talk low. My one has left, and the other will sigh and say that my one hasn't come this year. It's estimated that

Director a quickly ran to the ward, where several doctors had arrived "What's the matter? I did atomization in the morning!" As soon as she entered the door, Ayguli knew the general situation at a glance. She didn't need to ask more questions.

Lao Li Tou, a thin patient, is about 60 to 70 years old. At this time, the old man's two feet kept rubbing against the bed surface, and his toenails scratched on the bed sheet. The old man's hands opened and closed as he danced, raised and pulled his nails to his throat, as if someone who was going against the water wanted to catch something. It's like trying to dig a hole in your neck.

The old lady beside the patient had tears on her face. She grabbed the old man's hand and was afraid that the old man would scratch herself. She trembled and didn't know what to say.

Twist your head around the pillow. It's really like someone who's high in the disco, or a ghost.

Ayguli grabbed the sputum aspirator as soon as she asked the doctor in charge of the bed. The doctor in charge of the bed was a young woman doctor. At this time, she was nervous and scared and almost cried. Because there were not enough doctors during this period of time, she directly let the doctor who had just graduated into the hospital become a bed doctor. She didn't know what to do without experience.

With a cry, he said, "I ordered atomization last night, but I didn't do it during the ward round this morning."

"Step aside!" Ayguli was unusually angry. The doctor in charge of the bed turned the tears in his eyes, but he couldn't explain the grievance in his heart.

Zhang Fan didn't say anything. He walked quickly, reached out and quickly took out the old man's pillow,

then put his hand under the old man's neck and lifted it slightly. At this time, the old man's posture is like stretching his neck before the rooster crows in the morning.

The old man's hands grasped ayguli's arm and Zhang Fan's arm. She wears a lot in winter, but Zhang fan can feel the strength of the old man, because the meat hurts. It is estimated that ayguli, who wears less, hurts more.

But neither of them moved. Let the old man cling to it. Ayguli held a sputum aspirator and her hands were steadily stained with water while resisting the shaking of the old man. Then he looked up slightly and looked at Zhang Fan.

In the hissing sound, the doctors close to the old man could obviously hear the sputum rolling back and forth in the old man's organs like a ball, but it couldn't come out. The sound of suffocation is hard for normal people to hear. They want someone to put his hand into his mouth and take it out for him.

Hold the neck with one hand and forcibly pinch the patient's jaw with the other hand. When people are on the verge of death again, their strength is very fierce. If a female doctor estimates that she can let the thin old man shake around, but Zhang Fan is very stable.

When Zhang Fan quickly pinches the old man's mouth, ayguli quickly inserts the sputum suction tube into the old man's organs.

If the sputum will make the patient feel suffocated, and the sputum suction tube will directly cause instant suffocation. What is a sputum aspirator? It's actually a small aspirator. To be more popular, it's actually a small vacuum cleaner.

The suction tube is the one for drinking yogurt. Of course, this straw is relatively thick, which is a little thicker than the straw for drinking milk tea now. After ayguli steadily inserted into the old man's organ, she instantly turned on the suction and began to extract sputum from the organ. This sound is similar to that of some people who don't give up after drinking most yogurt, It is as like as two peas of yogurt standing on the wall of the tube, the most of which is a big one and a small voice.

Sputum, sticky yellow, sticky yellow, stuck in the sputum suction tube, all don't go very smoothly. Sputum suction is quite uncomfortable.

This operation is not to insert it and wait for it. You must hold the head of the sputum suction tube, shallow first and then deep, try to suck more at a time, go in and out, observe the patient's expression, and try to insert it into the depths of the organs.

These actions are counted by seconds. You can't slow down. If you slow down, you will suffocate the old man.

It can't be fast. I can't suck sputum soon. Not only to go in and out, deep and shallow, but also to hold a soft tube to rotate around the old man's organs to find more sputum.

The old man was already able to dance when he was suffocating. When the sputum suction tube was inserted, the old man's sudden eyes seemed to crack, and the blood was burst.

How uncomfortable is this feeling? Let alone others, ordinary people accidentally choke when drinking water. This feeling is hundreds of times worse than the feeling of choking when drinking water.

The sense of suffocation, the sense of pulling and inserting, and the strong sense of rejection of muscles. To tell you the truth, this thing would definitely be used as punishment if it were not for the operation of treatment.

The patient feels bad, and the doctor feels bad.

The soft tube in your hand not only needs to go in and out quickly, but also moves with the patient's twisted head, but also needs to find the sticky sputum standing on the sputum. To tell you the truth, it's too difficult. While watching the old man suffocate, he anxiously looked for sputum, and the strength in his hand should be controlled, otherwise the hose would be folded together.

Really, both doctors and patients are sweating at the same time. The difficulty of doctors is definitely experienced by greasy middle-aged men in their old age. It's always more painful for each other to have a resentful look in their eyes than to slap them in the face.

"Zhang Yuan, no, the organs are swollen and can't be inserted. Sputum can only be sucked into the shallow part of the throat, but it can't get in at all. "

Ayguli tried several times and couldn't get in.

Medical operations pay attention to a gentle, but also the number of times. For example, in catheterization, the old man's prostate is swollen. When catheterization, it can't be conducted at most three times. If it can't be conducted, it must be conducted with fistula, because this thing of the human body is not plastic or rubber. It will be edema if it is conducted more times.

In fact, sputum suction is the same. If you can't get in for the first time, it's more difficult to get in later.

"Cut the bag!" Zhang Fan shouted to the head nurse of the respiratory department, and then said to the panicked little doctor standing aside, talk to his family about his condition quickly.

And the old man's wife did not dare to cry, holding the phone trembling to call the child: "big baby, come on, your father can't!"

He spoke with a whimper.

It is estimated that the other party hung up the phone. The old lady finally cried out, as if she had released a little emotion after informing the child. She cried and said, "he was asked to do atomization

yesterday. He was suffocated and smoked secretly at night.

Can't you stop smoking? Can't you listen to the doctor? What can I do if you leave. It's all my fault. If I didn't give you cigarettes, you wouldn't do that. You must insist. "

The old lady trembled with injustice.

Young couples are always accompanied. Many old people serve the stubborn old man. In other people's eyes, they seem to feel unwilling for the old lady, but who knows, the old lady often regards the old man as a sustenance or a task.

Once the old man dies, in most cases, it is the hind leg of the old lady's spirit. It won't take long, or even a few years, for the old lady will die.

As soon as ayguli heard it, she wronged the little doctor, but when she was wrong, she was wrong. Who told her not to make a careful ward round? It's impossible to apologize. It's good not to clean up her when she comes down.

All the doctors in the office came to the ward. In this case, there are multiple doctors and multiple helpers. Generally, they don't need to be greeted by others. Once they hear that the patient in that room is dead and needs rescue, the doctors will consciously come to help.

This is teamwork in internal medicine.

I took the bag the first time.

As soon as Li Hui took care of the bed, the female doctor trembled and couldn't speak clearly. He immediately recorded the conversation and began to preach to the old lady.

The old lady was nervous and can't stand now.

"Can you wait for the child and let him see the child for the last time. Woo! Woo! Woo! " The old lady probably didn't listen. She heard that she might die.

After all, Li Hui has worked for several years. As he said, he put the pen into the old lady's hand, spent a few times casually, and turned around and left.

"I agreed to sign." He shouted to the ward as he walked.

In fact, the incision is already under way.

The nurses pulled the curtain hanging on the roof and moved the patients in the surrounding beds to other wards.

The other old man in the next bed was scared blue. It was so scary. In his eyes, these doctors are like killing pigs, pressing the patient and inserting tubes into the organs.

Just when he was palpitating, his wife said, "look, do you still smoke? You smoked with the old man last night."

In a word, the frightened old man trembled.

## **Chapter 1100**

Influenza is not terrible. What is terrible is that people with basic diseases will be terrible if they are infected with influenza again.

The old man's chest was as bulging as a balloon, and the breath he took in couldn't get out. It's easy to suppress incontinence.

Although organ incision is a knife, size is also an operation. Zhang Fan sterilized towel. Because it's a medical department, I can't even find a strap for a while. As a last resort, Li Hui pressed the old man's feet, the head nurse and ayguli pressed the old man's left hand, and the patient's hurried son pressed the patient's right hand.

"Never let go. Don't let go under any circumstances. " After taking 10ml lidocaine with a syringe, Zhang Fan mainly said to the patient's son.

"Well! Yes! "

In fact, the patient's son has long been flustered. What the doctor says is what he says.

After diluted with distilled water, local anesthesia and the pain of needle penetration can no longer cause the pain of patients.

Zhang Fan's hands are especially fast. This time is when he cuts the mess with a sharp knife.

Moreover, there can be no mistakes in the fast. Once you are wrong, you are afraid of wasting time.

If you don't eat or drink, you can live for a few days. Once you are embarrassed, you will die every minute.

Anesthesia, general local anesthesia takes effect in about seven or eight minutes, but now I can't wait. In fact, local anesthesia is a placebo. Before the anesthesia took effect, Zhang Fan had already operated.

Touch the ring cartilage, cut it down and pull it horizontally. The shriveled skin is like drawing a white line, and then slowly overflow the blood. Li Hui pressed the old man's feet. The old man's son looked at his father in pain and turned to the other side with his teeth and red eyes.

Cut open the skin, use pliers and tweezers, put Zhang Fan's hands on it, pinch the skin and pull it, open the skin and expose the organs.

When the organs were cut, the old man finally stopped struggling, and his body softened like Popeye's spinach time. The cut organ bumped blood beads and bubbles. It's like a milk baby spitting bubbles when he's full.

At this time, the speed should be faster, otherwise the blood will enter the lungs, which is a more troublesome thing. Pick up the cannula. The casing, how to describe it, is actually a plastic channel like a big wrench. This is used to open the trachea.

Because the trachea is stacked like the drain pipe of detergent. If this thing is not opened, it will be cut today. In the confrontation again and again, the experts who stand out and have anti epidemic experience are definitely a baby figure.

The hospital was handed over to Ouyang, and Zhang Fan rushed to Hanggai with the medical personnel put together.
