

## Chapter 1541

For a whole day, I sat there motionless from morning to afternoon and didn't have to do anything. I didn't do anything except occasionally reminding everyone to pay attention to allergies. As a result, Zhang fanlei didn't want to lift his legs after work. I feel more tired than having an operation all day.

Back home, there are many people at home these days. Zhang Fan's parents, Shaohua's parents, Lu Lao's couple and Zhang Fan's couple are still lively.

However, Zhang Fan and Shao Hua's parents don't come here every day. They come here mainly because they have to help cook some new year's food these days, otherwise they rarely come here.

In the words of Zhang Fan's father, I won't come to your house to be your nanny.

Having said that, it can be heard that Zhang Fan is more anxious than anyone to invite his colleagues to dinner at home during the new year. For a while, I don't think the meatballs are enough, and for a while, I don't think the meat is tasteless.

As soon as Zhang Fan entered the door, his mother-in-law found that Zhang Fan was tired today.

But there were too many people, and the old lady didn't say anything.

In the evening, it is the pig killing dish brought by the farm.

The pork with fat and meat and the big bones connected with the bone and tendon head have been cooing in the soup for a long time. After the oil completely releases the aroma, put in the meatballs and strong noodles. When the oil reaches the thick oil of the soup, put in the pickled cabbage.

In an instant, oil and acid become fragrant in heating. In cold winter, a hot pot of vegetables can make people saliva.

A mouthful of meat, fat but not greasy, and then eat a mouthful of slightly sour pickled cabbage. In an instant, I can't help but secrete a lot of saliva.

After dinner, old Lu and his wife left. Shaohua's mother said to Zhang Fan in front of Shaohua, "you have a high income now. You should still pay attention to your health. You look a little gray when you go home today. Don't fight too hard." Then he said to Shaohua, "you should tell him that his body is everything. He has enough income now."

With that, the old lady glanced at Zhang Fan and Shaohua and left.

Zhang Fan smiled awkwardly at Shaohua.

After dinner, the family sat in the living room watching TV. Rarely get together, Zhang Fan is also willing to watch TV with everyone. Zhang Fan's father and Shaohua's father are in laws. You drink one cup and I drink the old cellar taken out by Zhang Fan. This kind of old cellar was not bought in the world. At the beginning, the boss of blue and white gave Zhang Fan two kilograms.

Zhang Fan doesn't want it. People look at Zhang Fan like fools. "You know, this wine can't be bought with money. It was left when the old cellar was finalized. There are no more than six bottles in the world!"

Old man Lu doesn't drink, but he likes to watch others drink.

Chatting, the news began. Looking at it, the national face smiled and said: "the news agency reported that China has made a major breakthrough in tuberculosis treatment and prevention. With the efforts of our medical workers for countless days and nights, the cross era tuberculosis drugs have been successfully developed in the tea element hospital and entered the medical market.

The research and development of this drug represents that China has entered a new era in the original research of drugs. In particular, the medical workers of the tea vegetable hospital have not been restricted by remote areas and poor conditions. Generation after generation of tea vegetable people have not only stabilized the border of the motherland, but also made brilliant achievements.

They are a combination of old, middle-aged and young generations, including old experts such as ouyanghong, middle-aged experts such as Li Cunhou and young experts such as Zhang Fan. With their efforts and persistence, the flower of glory will bloom in the border of the motherland!

Every year, the patients who make their families poor or even lose their lives because of tuberculosis will never appear again, because finally the tea vegetable hospital has developed drugs to completely treat tuberculosis! At present, due to the limitation of the quantity and production capacity of drugs, priority can only be given to the sick and vulnerable groups. When the production capacity is fully released, the state will carry out vaccines free of charge.

Here, I want to say to the doctors and researchers of tea element, thank you for your hard work. "

For a time, the drinkers stopped drinking and the chatters stopped chatting. Everyone quietly looked at

the host of CCTV.

For a long time, after three minutes of news, Shao Huacai asked, "is this another praise for your unit?"

"Yes!" Zhang Fan is also a little confused. He didn't say hello!

As soon as I finished, the phone came in.

"Did you watch TV? Did you watch TV? Did you hear me? Did you hear me? I was praised by Yang Ma. I was..." Ouyang was like a little girl, and his voice was a little broken.

Zhang Fan is also excited, but no matter how excited he is, he is not as excited as Ouyang. After hanging up, Ouyang walked around the house and called a person later, "did you see the news? Didn't you see it? Why not? There's a replay in the evening. Have a look."

"Old classmate, have you seen the news?"

"Ha ha, Dean Li, have you seen the news?"

"Dean Wang, have you seen the news?"

Really, it's estimated that someone hacked Ouyang's phone at that time. NIMA is on the central mother. You still have to call. Would you be a person!

Zhang Fan didn't call anyone, but his calls were like New Year's greetings, one after another.

"I'll go, younger martial brother. You're a cow. I haven't been praised like this. I envy you to death." My brother's teeth are sore. The start is higher than Zhang Fan, the time is longer than Zhang Fan, but the results, hey, what achievements are we talking about now.

The boss of chasu was also excited. Although he did not mention the government of chasu, the achievements of chasu in this hospital were more than three minutes, more than three minutes, half an hour, and the news of the big leader was only a few minutes.

Excited, he wanted to say a word to the finance immediately and settle the arrears to others, but he endured it.

As for many ordinary people, during the day, they also yelled because they read some shepherd dog articles and felt that tuberculosis drugs were deceptive. As a result, when they read the news, they were praised by the central mother. They originally wanted not to have an injection. After listening, the drugs were limited and they couldn't sleep.

Thinking about it, I took the pony to line up before dawn.

Zhang Fan's classmates heard that Zhang Fan went to Yang's mother and never watched the news. They watched the replay on their mobile phone and looked at the tea vegetable hospital named and praised by Yang's mother. Zhang Fan, who was praised, instantly felt that he was still carrying a dressing change bowl. Too NIMA was not angry.

The dean of the clinical medical school of Lanshi medical college was almost out of breath when he looked at the news. "What did you say? What did you say? My eyes are so poisonous! Right, right!"

The president of NIAOSHI Medical University, looking at the news, was relieved at last. As long as Zhang Fan didn't roll over, everything was easy to say. Now he feels that he is Zhang Fan's future mother-in-law. The bride price definitely needs to think about it. Do you want to whore for nothing? you must be dreaming!

The remote control of the old man in the magic capital was almost crushed, "why, why, there was a country to give him a platform. Why, why!" Lao Chang was almost crazy.

Originally thought that Zhang Fan was about to overturn, and the foreign media scolded him again. In the future, no one asked himself who Zhang Fan said. As a result, NIMA came out of the platform. What's more, I'm NIMA, an excellent young expert. He's a pit, a pit!

In the evening, Zhang Fan and Shaohua lie in bed. Shaohua doesn't bother Zhang Fan.

"In the past, I thought a little more money would make life better. But now there is a lot of money. We have one house in modu and three houses in tea. We can pay off the money of elder martial brother, the income of the farm this year and your salary. Moreover, you are now on the top news in China. Don't fight in the future."

Zhang Fan smiled and pinched the white steamed bread. Shaohua was not dissatisfied with it.

"When I was quarking, I told the truth for money. But now it's different. As for the news, it's all floating clouds! That's the European Academy. If you want me, I still like the national real gold and silver to praise!"

"Look at your show. When the news came out, your mouth was crooked. Now pretend to be a big tail wolf!"

"Hey hey, it's false to say you're unhappy. Now it's not a sentiment. The hospital is so big that if you don't move forward, you can only collapse back. I can't eat enough. The people who follow me don't care. I can't say I'm sorry, everyone. I'm tired. Let's break up.

To be honest, I'm really not as tired as I was when I was running surgery in various counties and townships. At that time, I could sleep six hours a day. It's already a holiday. Now I'm mainly tired and there are too many things. If you relax a little, you'll have big problems. "

"What can I do for you?" Shaohua touched Zhang Fan's face and asked with pity.

"Hey, hey, fight with me!"

"You can't beat me again!"

"Oh, look how I deal with you today!"

People are in good spirits at happy events. They say it doesn't matter, it doesn't matter. It's like a poor student who is occasionally praised by the teacher. Although his mouth is as hard as a mallet, he can't forget it in his heart for the rest of his life.

A night of pounding the sky and pestle the ground.

The next day, Zhang Fan entered the hospital. The doctors and nurses in the hospital were different.

"Zhang Yuanhao!"

This is an older nurse, smiling and greeting Zhang Fan.

"Dig, the dean is so handsome. Today's sweater is so beautiful!" This is definitely the same group of nurses as Zhang Fan. Now this way of greeting, they will use, which is also a privilege for them. Of course, it's said in person. Behind the scenes, it's black buy what sweater Jiang wears. After wearing it, it looks like a big bear. It's black, strong and furry.

Then, it became, how hairy, where hairy, a group of big girls and little daughters-in-law, driving colored jokes before work.

"Hello, Dean!" He ran away after saying hello carefully, which was later admitted to the hospital.

When entering the office, Wang Hong took the book and smiled, "OK, don't arrange work for me today, network center. Today it's Professor Li's turn to stare at the digital hospital. I'm going to have an operation. There are a lot of gallbladder cancer operations recently."

Zhang Fan waved his hands.

"No, there are a lot of people around today who say they want injections. Some places have lined up for several laps. It is estimated that there will be several times more people today than yesterday."

As soon as Zhang Fan heard this, he was going to drink tea and put down his hand.

After thinking for a while, he said, "call Zhao Yuan and ask him to have an operation. I won't go today."

"Huh?" Wang Hong didn't understand.

"Silly, so many people have to stare at the injection. Once the number of people doubles, the invisible error will be magnified geometrically."

Zhang Fan said as he walked towards the network center.

## **Chapter 1542**

Ouyang, named by Yang's mother, is different from Ouyang in the past.

Zhang Fan sent Ouyang one million yuan. Ouyang not only didn't have any heart, but also said that Zhang Fan was the black sheep of his family. But now it's different. After Yang's mother praised Ouyang, Ouyang felt that he was a hero now.

For example, Ouyang now doesn't speak so loudly. For doctors and nurses who are late, she won't criticize and educate them that the nose is not the nose and the eyes are not the eyes. She won't turn the bottom. She won't say what happened to you last time and this time. She won't stop when you blush.

Now Ouyang is speaking in an old mother's tone, peacefully and politely. You even have to care about each other's life. Do you have no money to take a taxi? No boyfriend, no girlfriend? Anyway, I care very thoroughly!

Several people who were late were frightened and cried by Ouyang. In the past, although Ouyang pointed to his nose and cursed, everyone had no burden at all. Everyone knows Ouyang's calf protector. Although he scolds fiercely, there is no follow-up. But today, the old lady, like an old mother, began to reason kindly.

Several little nurses were frightened and cried, "I'll never be late again!" They thought they were going to be fired. Otherwise, why is Ouyang so kind today? The kind people have become another person.

Seeing the little nurses crying, Ouyang suddenly found that the effect of this kind of education was so good.

Everyone can't adapt to Ouyang's changes.

Lao Chen also came to Zhang Fan specially, and Zhang Fan smiled. He knew that the old lady couldn't

install it for a few days. The old saying of this thing was finished. Rivers and mountains are easy to change. It's hard to change their nature. In a few days, Ouyang patted the table and scolded his mother.

Zhang Fan doesn't have time to see the changes of Ouyang. Today, his heart is raised.

The medical industry is different from some industries. In some industries, as long as there is no problem with the large system and some small technical details, it will be wrong if they are wrong. After discovery, it will be finished after modification. There is no big problem.

But different from medical treatment, the system can't go wrong, and the technical level can't go wrong. Because this is a matter of human life!

For example, there are many injections of Chinese medicine. Is the system wrong? They are all old prescriptions. They have been used for hundreds of thousands of years. Although there is no clinical data, is there anything wrong that can be proved by time? Yes, but why are more and more Chinese medicine injections taken off the shelves?

This is the technical problem! Simple and crude pharmaceutical methods, taking pharmacological changes for granted, lead to a wide range of discomfort symptoms of drugs, making 80 to 90% of people in China allergic. Is this possible?

Zhenima, a traditional pharmaceutical in China, makes people sad. For example, there is an enterprise with confidential formula in hand. As a result, this product has little money in research and development in a year. When it makes money, it even goes to get stocks. At the end of a year, the money from selling drugs is not as much as that from stock speculation. What a black sheep!

What Zhang Fan is worried about now is the technical defects of tuberculosis drugs. If one person uses this drug, the effect is very good. If 10000 people use this drug, the effect is also good. It seems that there is no problem.

But once there are millions or tens of millions of people, the small defects will be magnified. Therefore, Zhang Fan is worried that the direction given by the system is right and the general direction is right, but Zhang fan can not guarantee that the details are fully consistent with the results in the system. From R & D to pharmaceutical, there will be different places.

The number of people who inject drugs is increasing little by little.

"At present, we have exceeded 100000 injections!" The director of a prevention center in Mordor

reported the data with a happy face.

After the report, he found something wrong. Not only the young director of the tuberculosis laboratory looked serious, but also several other national experts looked cautious.

"Is something wrong?"

"Su Province injection exceeded 100000!" Reports from various places have also returned, and 10000 people have begun to break through the 100000 level.

"Over three million?" Zhang Fan asked. The head of the capital network center immediately opened Mike and reported: "director Zhang, it's just over three million."

"No feedback on the data of adverse reactions yet?"

"At present, there is no adverse reaction!"

When Zhang Fan heard the news, his heart was a little more stable. There are no adverse reactions at the level of one million, indicating that there are no problems in drug technology.

Not only Zhang Fan but also many people worry about the injection data.

For example, some foreign media stationed in China, although they do not have aggregated data, they can probably calculate the number of injections through the number of injection points.

News, especially foreign media, has a characteristic for news reporting. That is, when a hot spot appears, all of them rush to release it. After the hot spot passes, there are few people who continue to track it.

This time, it is no exception. First, the foreign media are all kinds of tuberculosis that are not optimistic about China, and then the central mother came out to the platform in person. The field of public opinion has become a battlefield.

Then a group of younger brothers under Yang Ma also began to enter. This makes what was originally a technical dog's concern become gossip. For a moment, this thing can't be reheated, and it starts to scald the eggs.

At the beginning, everyone quarreled ideologically. Jin Mao said that China had human rights, freedom and coercion.

China says that it is responsible for the people, but you are not responsible. You are just the running dog of capital. You only pay attention to the rich and don't pay attention to the ordinary people.

Anyway, you come and I go, and the friction is bald.

As a result, Jin Mao saw that there was no result in such a quarrel. Now the level of Chinese spokesmen has become worse. So while they began to collect data, they began to invite world authoritative experts to interpret it.

"Although I also hope that someone can develop effective drugs to kill tuberculosis, it is impossible. At present, the scientific research level of China is not up to the level of solving this problem. I have heard that Dr. Zhang Fan is an excellent surgeon, but he has made little achievements in Microbiology and genetics.

I suggest that China and other countries in the world should use this drug carefully, continue to observe and continue to conduct effective clinical trials. "

Mishima invited the director of Mayo PCR laboratory. What is this laboratory for? In fact, it is committed to global infectious disease research. This laboratory can also be called gene amplification laboratory.

For example, the new AIDS detection, hepatitis B, avian diseases, oncogene detection and diagnosis, DNA fingerprinting, individual identification, paternity identification and forensic physical evidence, animal and plant quarantine, animal and its derivatives detection, animal feed, cosmetics, food hygiene detection, genetically modified crops and genetically modified microorganisms detection in recent years.

They have a lot of achievements in it and made a lot of money!

When Dongdong C, the most influential of the three islands, broadcast the scientist's interview live all over the world. For a time, the impact was huge. Even some people in China began to shout. Be careful. The world's top scientists came out to speak. This drug can't work. The director of a laboratory has become the chief under the publicity of interested people. There is no one left.

"What should I do?" A leader of Yangma asked the leader of publicity.

"They have experts, don't we? Ask the R & D experts if they are interested in being interviewed. If not, invite the equivalent experts of the Chinese Academy of Sciences to interpret."

"OK!"

In this way, the leader of Yangma called and told Zhang Fan the whole story. Zhang Fan hasn't paid attention to the news recently. His heart has been mentioned in his throat these days. Who should worry about gossip.

However, when Yang's mother told Zhang fan that the director of the PCR Laboratory of the golden Mayo came out to speak, Zhang Fan asked Wang Hong to find a program for himself. After watching it, he decided to accept Yang's mother's interview.

If the media continues to use human rights, freedom and other batons and hammers, Zhang Fan doesn't lift his eyelids. This thing is to listen to mole crickets. Isn't it still planting crops? But when the director of the gene amplification laboratory came out, what he said was not unreasonable. Zhang Fan was about to speak.

How to say, for this level of research, what ordinary people say, Zhang Fan won't care. Just like Tao said, ordinary people argue with rocket experts. Why don't rockets use matches to light them? Rocket experts lose when they look at him.

Now it's different. The top experts come out to talk. Zhang Fan has reason to teach each other. It's not that Zhang Fan thinks this class will be famous.

He is pragmatic. After he went to work, he made Ouyang more pragmatic. Although he feels that Ouyang is a little crooked, Zhang Fan is more pragmatic.

If you don't speak up, it will become troublesome for TB drugs to make money abroad. To make money from drugs, to be honest, this industry is sometimes difficult.

It's free. It's developed with real gold and silver. It's not free. Will it be developed in the future? Therefore, making money in China is certainly not enough. Only selling medicine abroad. Zhang Fan is not a great lover of science without borders. Sometimes when he goes out of the tea vegetable hospital, he will suffer if he doesn't take advantage of it.

But now the authorities of others have come out and said that this medicine is no longer working. Can Zhang Fan not go to the head.

This is the power of the right to speak. Uncle Mao said that if we do not occupy, we will be occupied by the enemy.

Now I see that the bicycle is going to become a car. I was stopped. Can I not work hard! Zhang Fan doesn't think much about the state subsidy. There are too many people who pay money. Look at several academicians. They can't drive away now.

According to Zhang Fan's idea, these academicians should be selfless when making money, say no with a just face, and work like a model worker. It's a pity that they can't. now, several academicians of the golden mean, figures and the capital lung cough hospital, with wide eyes and other state subsidies, it is said that the distribution coefficient has been completed.

Not only academicians, but all groups involved are eligible for subsidies.

Zhang Fan's role in this drug is to raise system problems, and these old men and other teams are perfect and filled with technical problems. Who is important is important. If Zhang Fan swallows it alone, it is estimated that he will not dig people in the future. It is estimated that

So Zhang Fan is helpless to these old men.

As soon as Zhang Fan is willing to accept the interview, Yang Ma also has the heart to compete with Dongdong C.

First, they wanted to invite Zhang Fan to the capital for an interview. Zhang Fan really didn't have time and the effect of telephone interview was not good.

Yang Ma directly sent a strong interview team to tea vegetable.

In the government, "Yang Ma wants tea?" The boss of tea vegetable was surprised and asked the boss of publicity.

"Yes, just after receiving the notice from the superior, the interview team estimated that they would be able to go to the tea vegetable hospital in the afternoon to interview Zhang Fan."

"Hey, why is it just an interview with the tea vegetable hospital? Without our support, Zhang fan can fly so high? How much did we pay? Now the government's vehicles connected and waiting for use have been requisitioned by the tea vegetable hospital. What did we say? We haven't bent down to serve them. Why can't we accept the interview.

Comrade, our work is still not in place.

In this way, you can discuss with your superiors to see if you can give our government a little time to appear. "

"It's not us, but you want to leave the country!" Although the propaganda boss was uncomfortable in his stomach, he solemnly promised to apply.

Tea vegetable hospital, Wang Hong heard that Yang Ma was coming to the hospital for an interview.

Darling, the woman was so excited that she didn't know what to do. The expression on her face was rich that she asked Zhang Fan: what clothes should I wear and what hairstyle should I do.

Zhang Fan takes a look, hey!

"Lao Chen, tell the European hospital that Yang Ma will interview in the afternoon and let the hospital make preparations."

To Lao Chen, it's not simply to let Lao Chen be the microphone, but to let Ouyang be responsible for it. Lao Chen implements it. After all, it's the central mother who comes. Pay a little attention to environmental sanitation.

Lao Chen was shocked when Yang Ma came. "I'll go. Zhang yuanniu has provoked Yang Ma."

But he was stunned, and then immediately went to Ouyang.

Ouyang is in the office and handles the document carefully. After being praised, I don't fish these days. Otherwise, I either water the cactus or go home to watch the stick opera. There is no door for her to handle the documents honestly.

"Yang Ma is coming?" Ouyang shivered when he heard this.

"Ouch, for such a big matter, why don't you say it earlier and call the directors of various departments to the meeting first? Do you think I should have a perm or something?"

### **Chapter 1543**

Ouyang waited for a whole day. His hair was black and shiny. As a result, Yang Ma's interview team arrived at tea in the evening. And I didn't come by plane. I came in an interview car.

The tired old lady is still interested in gossip. "The capital is thousands of kilometers away from us. Why are they so fast?"

"It's estimated that the interview car opened in the bird market came first. Otherwise, no matter how fast you drive, you won't arrive for a day." With that, Lao Chen advised, "you don't look very well either. You'd better have a rest first, or you'll look bad on the camera."

"Well, OK, I'll go back and have a rest first. I'm so tired this day." Ouyang hammered his waist. He didn't want to go. When he heard that Yang's mother was coming, the old lady had to recite her speech silently in her stomach after cleaning up. She couldn't be tired.

It is joked that there are three places in China with the most foreign mice, the capital, a street and the frontier bird market. However, the news agency also has the largest point in the northwest. After Yang Ma came to the bird market, she borrowed someone else's interview car, and then set off towards tea. To compare with Dongdong C, we need to work hard.

The leader of the team is Zhang Fan's fellow townsman, who also graduated from Suda's Shuizui. Although they are all from Jiangsu Province, the Zhangfan family and Shuizui family cannot be compared. The Shuijia family was a big family 49 years ago. It is rumored in the Jianghu that many leaders provided tolls when they went abroad before they did great things.

It's hard to say whether it's true or not, but the water family is also a big family in Suzhou Province.

"Water teacher, this time you go out in person. It seems that Zhang Fan attaches great importance to this tea element!" On the way to tea, a young woman planner asked the faucet with a smile.

"Hehe, I did my homework before I came here. We laymen don't know much. In fact, the tuberculosis of tea element can be called a strategic weapon. From a historical point of view, our country often stabilizes the northwest first, and then stabilizes the southeast. As long as the road to the northwest is opened, the national rejuvenation is just around the corner.

But this needs a stepping stone. For example, this tuberculosis drug is definitely a very good stepping stone. The world's highest mortality rate of infectious diseases, AIDS first, tuberculosis second, and Asia and Africa, is the world's highest rate of tuberculosis infection, so it is really important. "

The car slid out of the valley from the curve. When it turned the foot of the mountain, a plain suddenly appeared in front of us, walking through the primeval forest. Looking at the bright lights in front of us, it suddenly looked like the wheel of history was moving forward, and human civilization came out at once.

"My God, the tea vegetable hospital is so awesome. The highest and brightest place in the whole city is the hospital. Mr. Shui, do you see the apron in the distance?"

The pretty editor couldn't close his mouth.

Some people say that there are many beautiful women. In fact, the capital has the most beautiful women!

Looking at the hospital in the distance and looking at the previous files, the faucet was surprised, "my little fellow is powerful!"

Zhang Fan stared here for a day, but he was not tired yesterday. It was strange that he was so leisurely yesterday that he was even more tired than today.

"After work, why don't you leave?" After all the injection points were closed, Zhang Fan was off duty. When he turned around, Wang Hong didn't go either.

"You didn't get off work. It's not suitable for me to get off work!" Wang Hong didn't say that she also

wanted to be on TV. She actually boasted that she was a model worker in disguise. Zhang Fan curled his mouth. Generally, when Zhang Fan went to the operating room in the afternoon, she didn't see Wang Hong waiting for her to come out of the operating room.

Just about to get off work, Wang Hong's phone rang.

"Zhang Yuan, Yang Ma's people have entered the urban area. They said they would arrive at the hospital right away."

Zhang Fan was stunned. "Let's inform the leaders at home and welcome them. After all, they are guests."

Only Lao Chen was at home. Zhang Fan, Lao Chen and Wang Hong didn't wait for a while at the door. They saw a big sign of Yang Ma painted on the car body and a high antenna hanging on the roof. Ivecu drove into the hospital like a walking antenna baby.

"Zhang Yuanhao!"

"Hey, water, good brother water!" Zhang Fan doesn't know what to call others. It seems inappropriate to call the host. It's not very good to call the teacher. He really didn't expect that it was the faucet that came to tea.

This face is big enough. Zhang Fan is not as far away as the faucet thinks. He doesn't worry about turning around. What he worries about is that this thing can't lose money.

Zhang Fan originally wanted to let others eat and drink, then rest for one night and talk about it the next day.

But people say that the news is timely and can't be delayed. If possible, it's best to do an interview overnight.

People who come up thousands of miles are not tired, and Zhang Fan agrees.

After Lao Chen arranged to enter the office, he took other people's photography and a place to choose such as a director.

Lao Chen explained to Wang Hong, and Wang Hong immediately began to call. Zhang Fan accompanied the faucet, and a female officer with a notebook, pen and computer. She didn't know what she did.

Without taking a sip of tea, he exchanged greetings a little, and Shuizui began to discuss with Zhang Fan.

"Zhang Yuan, this interview will be a character interview, so I'll tell you the general process first."

Zhang Fan nodded and said he understood. Shuizui began to say to Zhang Fan: "first of all, our program

is an interview, interspersed with some relevant video records. As long as your interview is about the scientific research road of tea vegetable hospital, there is also your heart journey. Of course, if you don't say something confidential, you can refuse it directly.

In addition, it's best to explain it in a popular way in terms of specialty, so that the audience can understand it in a simple and popular way. "

In a short time, Ouyang came, Lao Ju came, Yan Xiaoyu came, Ren Li also came reluctantly, and Li Cunhou was in the laboratory.

Lao Gao didn't come, Luo Zhengguo and Zhao Jingjin didn't come, because they didn't have to be there, so they were reluctant to come if they were technical. Because I don't have much credit for this project, I won't have the cheek to come.

As for Ren Li, she really doesn't want to come, but she is nominally the second in command of the hospital. She can't come without coming.

Others, needless to say, are ready for a day.

Even the boss of tea vegetable came. I don't know how to get it. Anyway, it is said that he promised to appear on the camera.

The process is probably to take a panoramic view of the tea vegetable hospital, then Interview Zhang Fan, and then interview the hospital doctors and the local government.

It sounds very simple, but when Zhang Fan looked at it, they estimated that they would be busy all night and all day. For a moment, they felt that the work under the light was not easy to do.

First interview, Zhang Fan's office certainly can't, leather sofa big class platform, this is a little too much, so people finally chose the canteen of tea vegetable hospital.

After Zhang Fan's transformation, the canteen is very good, with bright windows, coffee machines and so on, and a little modern.

"Good evening, everyone in front of the TV. In recent days, a Chinese medicine has aroused heated discussion in the western media. What kind of medicine is it? This time, we specially came to the tea vegetable hospital to make an in-depth report on this medicine. Next, please welcome president Zhang Fan of the tea vegetable hospital to say hello to you!"

Zhang Fan rigidly greeted Ouyang and Ren Li, who were sitting opposite in the canteen. Once they said hello, they said hello three or four times. Ouyang wanted to go up and help Zhang Fan say hello.

Finally passed. While staring at Zhang Fan, Ouyang said to Ren Li: "look at him. It's not natural at all. Look at him. He said to put some oil on his face. If he didn't do it, the light would be black and

reflective!"

Ren Li kept smiling. She knew that the old lady couldn't sit still at this time.

"Zhang Yuan, at that time, the tea vegetable hospital was only a regional grade III hospital. Why did you think of doing scientific research at that time?"

After greeting and asking, he finally entered relief. The faucet is also sweating. Zhang Fan is too stiff. When he looks at the camera, he feels unnatural.

However, after starting to ask, Zhang Fan seemed to be natural.

"Well, in fact, there is a saying that if you are poor, you will want to change. If you are not poor, who will make yourself talented! If the tea vegetable hospital is in the capital and in magic capital, the state will subsidize me several billion a year, I don't want to!"

"Well, self-reliance, delete the guide!"

Zhang Fan's eyes widened. Isn't this the truth?

"Hehe, we need to have a little realm in such a courtyard. Although the problem of this region is a big problem, we'd better not talk about it first!" Water spouts are stupid, so if you broadcast it, don't laugh off other people's big teeth!

"What is the original intention of the hospital to engage in R & D?"

"For the health of all mankind, for..."

It was stopped again. Zhang Fan couldn't fix each other!

Ren Lidu, who sat opposite, was dying of laughter. "Zhang Yuan is so funny. You see, the host's face is green."

Ouyang was not angry. As a result, Ren Li said that she was also angry and laughed. The leader of tea vegetable looked at Zhang Fan with regret and wanted to go up and replace Zhang Fan.

"Some European and American countries are not optimistic about the prospect of tuberculosis drugs, especially the director of Mayo laboratory has made a detailed popular science program. Can you talk about your views?"

One by one, the faucet wants to write the answer to Zhang Fan and let Zhang Fan read it. It's too jumping off.

When asked this question, Zhang Fan had something to say.

"In this regard, they are not qualified to say that it can only be his judgment. First, the research and development of tuberculosis drugs has stagnated in recent decades. Many countries in Europe and America have abandoned this project. The most professional experts in the field of tuberculosis are not in Europe and America, but in China.

Second, Professor M's so-called drug effect, in fact, he still stays in the idea of bacterial killing in the last century. This road has come to an end, and we are genetic modification... "

This time, the faucet was hard to interrupt, but after listening for a few minutes, he didn't understand. "Zhang Yuan, can you simply say what kind of TB drugs are?"

"OK, let's make an analogy. A doctor is a locksmith, while a patient's tuberculosis is a lock. There are three steps to open this lock. First, find the location of the lock, which is the so-called place where the tuberculosis gene can be modified and changed. Second, push out the key of the lock backward after finding the lock. Third, find a way to send it into the body and let the lock open the key. It's that simple  
o "

Zhang Fan's ability to popularize science is still very strong.

"Oh, that's what I understand. I understand every liberal arts student." The faucet finally smiled and asked, "are these three steps very difficult?"

"Hard!" Zhang Fan nodded, "To find the lock first, we need to go through a lot of experiments to determine, and then push the key backward. We should not only ensure that the key can open the lock, but also ensure that the key will not open other locks, that is, its particularity and uniqueness. Finally, we should find a way to make the key reach the lock smoothly. Every organ in the body is like a threshold It's hard to guarantee the arrival and the effect. "

"Can you tell me why European and American countries did not invent this drug?" The faucet asked again.

Zhang Fan likes the water nozzle in his heart and finally asks for it.

"In 2008, Johnson & Johnson stopped their R & D laboratory in the field of infection and Pfizer stopped their R & D laboratory in the field of nerve in 10 years. These fields are cutting-edge areas of research. Why should they close down? It is because the failure rate is too high. There are no more than three kinds of 100 new drugs that can survive from R & D to launch.

A patent medicine takes an average of ten years, which is difficult for even the world's top companies to bear. So they stopped the nervous field and the infectious field.

Are our hospitals richer than them? No, our tea vegetable government can't pay wages, but it still goes all out to support us in R & D. in our hospital, the poor can't afford to eat, but we still bite our teeth to

engage in this scientific research. It's not our ambition, but the people need it and need such a drug.

After we carried out the research, with the strong support of the state, we gathered the top scientists of the country's top infectious diseases department. Why Europe and the United States can't develop it is because they can't understand the needs of the masses.

But we can. Although we are poor, look outside. We dare not even turn on the street lights in many places. The hospital is too poor, poor... "

Zhang Fan couldn't say any more, because the flowers of tea vegetable puffed past the window. The advertisement of tea vegetable hospital in ouyangnong was directly printed in the eyes of the faucet.

Zhang Fan is angry. I really want to ask, who let it fly over now!

Ouyang is not happy either. Is this the time to show off?

Wang Hong hurriedly said to Ouyang, "they said it's best to take a full picture of the hospital on the plane!"

"Well! Yes, it's a little difficult!" For the first time, Shuizui met such an interview object. Where is a scientist? Where is a dean? This is clearly a roadblock for money.

You can't afford to turn on the street lights when you're poor. You're lying with your eyes open. The most conspicuous building in the city is the tea vegetable hospital. There are no planes in the hospital, and there are no best hospitals in the capital. You're still crying for poverty here. Ouch, it's shameful!

#### **Chapter 1544**

"In fact, this program is mainly to let people know about tuberculosis drugs and let foreign media know about the tea vegetable hospital. As for others, such as the superior appropriation, it is estimated that the effect is not very good here. Besides, if you look at the tea vegetable hospital, the large area can become a district, and there must be three or four bus lines in it?

And look at the direct flight that just flew in the past. Although I'm not professional, I also know that it doesn't seem to be much in Asia? "

Shuizui had to interrupt the interview to get the interview back on track.

"Let the common people know, but let the foreign media know why? They don't give me money. Brother, you don't know. Our land is not worth money, otherwise the government can't rely on the bank for such a large plain. You say that the plane is actually donated by people, which has nothing to do with the money. What I'm saying is the truth!"

Shuizui smiled helplessly. Many interviewers were afraid of losing face or in order to improve their popularity, they had thirty cents in their pockets, which could be said to be thirty thousand yuan. This is good. They call themselves beggars' sect! It seems that he doesn't care about fame at all, just hoping to make some money.

In fact, Zhang Fan also wants to understand that he is a doctor, not an entrepreneur, not a star, and doesn't need any superior image. This kind of interview can't be met. He just wants to make himself famous. He doesn't think it's worth it.

This is also a kind of sadness of the frontier people. The nimachaesu government is richer. Doesn't Zhang Fan understand that he is tall and noble? I'll pay for the whole audience? However, poverty is not a reason for not working hard.

After the interview with Zhang Fan, Shuizui thinks this needs to be edited by experts, otherwise it will become an interview accident. Therefore, we can only add other elements to fill the program time. For example, let Ouyang and them sit together and chat in the restaurant, and let the boss of tea vegetable talk about their contribution to tea vegetable hospital.

Other people's interviews are very successful and have positive energy. Unlike Zhang Fan, he only asks for money.

While filming, LV Shuyan from obstetrics and Gynecology called.

"Zhang Yuan! Amniotic fluid embolism, come on, no!"

As soon as Zhang Fan listened, like a rabbit, he couldn't take the phone, so he turned and ran away.

"What's the matter?" Ouyang shouted, "come on, amniotic fluid embolism!" Zhang Fan replied while running, and then shouted to Wang Hong, "come on, contact the experts of each department for urgent consultation."

After that, Zhang Fan ran away with a puff of smoke, while other interviewees, when they heard of amniotic fluid embolism, were also shocked. One by one, even Ouyang, who rarely wore high heels, ran

towards the Department of gynecology.

In more than ten seconds, only the interview team and the leaders of the tea vegetable government were left.

"What's the matter?"

"It's estimated that there are critically ill patients. Come on, this is the best material. This is a hospital. Saving the dying and healing the wounded is their essence. The interview will never ask anything. Let's follow."

The photographer with a large camera chased the faucet and kept the camera stable while running.

"Dear viewers, the interview has to be interrupted. It's 3 o'clock in the morning. When many people have fallen asleep, a critically ill patient appeared at the tea vegetable hospital. They have run out of hospital Zhang. I use the fastest speed, but I still can't catch up with them, or even the oldest president of the European hospital."

After the panting faucet entered the courtyard of the gynecology building, the courtyard was already lit up. Doctors from all disciplines running from all directions, including men and women, even they don't even have an extra look at the camera.

In the yard, the faucet didn't speak, but looked at the white tide quietly, and there was a feeling of hot blood in my heart.

Obstetric bleeding accounted for 27.1%, 2% and pregnancy complicated with hypertension 14.0%. 3. Sepsis, that is, obstetric infection, accounted for 10.7%. 4. Unsafe abortion accounted for 7.9%. 5. Amniotic fluid embolism accounted for 3.2%.

Although amniotic fluid embolism is only the fifth place and seems to be a less serious disease, in fact, this disease is called Devil's lottery in obstetrics because it is not preventable.

In other words, no one knows if it will happen.

The so-called amniotic fluid embolism means that during delivery, a large amount of amniotic fluid enters the maternal blood circulation, and the fetal stool, mucin, hair, epithelial cells and fetal fat in amniotic fluid become emboli of embolism, resulting in blood embolism.

This is not all of it. Embolism in other departments is a fatal disease, but this is not all of it.

This thing, because amniotic fluid contains substances that destroy coagulation factors, it leads to coagulation function. That is, the blood flow of the female emperor of the three islands is more than the same, and this is not a slow flow, but a big blood avalanche, and the bleeding of the kidney and heart is sprayed.

A small blood vessel can give you urine to the roof three meters high, and this is like a flood, rushing out of the female genitals at once, not gushing, but collapsing.

When amniotic fluid enters the blood vessels of pregnant women, it will immediately lead to pulmonary embolism and shock, followed by massive bleeding.

Because of embolism and bleeding, doctors dare not dissolve the thrombus or stop bleeding. This thing is blocked and broken. Really, it can put the doctor into a dilemma. It's really not true love, but NIMA's life.

Moreover, the disease is urgent and deadly.

During delivery and in a short time after delivery, the parturient may be irritable, shivering, vomiting, then cough, dyspnea, cyanosis, high heart rate, and sudden shock. The pregnant women with sudden illness even lost their blood pressure after a scream, and died quickly within a few minutes.

In some hospitals with low medical level, doctors haven't found the problem yet, so they listen to pregnant women: ah! Then he died. It's no exaggeration at all. Therefore, when Zhang Fan heard of amniotic fluid embolism, he was like a frightened donkey and nearly ran off with four hooves on the ground.

At present, it can be said that amniotic fluid embolism is the most fatal disease for gynecologists and obstetricians.

In the passage of the operating room, Zhang Fan took the surgical clothes handed over by the head nurse of the gynecological operating room while running, and changed them at the same time. Not only he, but also the doctors behind him are almost like this, changing them while running.

One by one, my clothes fell off and flew all over the sky. Even some female doctors' colors were seen.

The seven or eight doctors who entered the operation were like an arrow formation. Zhang Fan was in the front, followed by Ren Li in the heart, the old residence of the respiratory department, urology and extrathoracic.

This kind of patient, to put it bluntly, is to see whether the doctor is fast or the king of hell is fast.

At this time, no one talks with the family about the operation fee and the operation fee, or even the signature of the family, because they can't care about it.

Many people are pregnant, which is a good thing, but they scoff at the pre pregnancy and mid pregnancy examination in the hospital.

Really, this is very important. You must not listen to hearsay or what the old man said without physical

examination. This is very important. If you can't meet anyone, it's good. But if you meet someone, bad luck is human life.

Life can't come back, this thing really can't be willful.

Wang Hong and Lao Chen followed behind them and kept picking up the clothes scattered on the ground. Like two scavengers, Wang Hong only picks Zhang Fan's clothes!

Ouyang didn't care about his hairstyle. His high-heeled shoes had long been thrown away by the old lady. Wearing the slippers handed over by the head nurse, he stood at the door of the operation and kept calling, "hematology department, prepare 2000 CC plasma."

"Anesthesiology department, who is at home? Let your director go to the gynecological operating room immediately. Come on!"

"Nursing department, come and give some instrument nurses in charge."

The cooperation of the hospital has been very tacit. In this case, Zhang Fan and Ren Li are knives, while Ouyang is waving flags. Lao Chen takes the security department to ensure that the road is always unblocked and that there is always an elevator waiting.

The faucet looked at his watch. "It took less than two minutes from answering the phone to the doctor entering the operating room. Now president Ouyang has begun to deploy doctors. I hope they can come soon and a life awaits their rescue."

Just after the voice, the anesthesiologist ran in. Ouyang didn't talk much. He pointed to the No. 3 operating room with a finger.

Then the director of the nursing department took four middle-aged nurses. Although they were yellow faced and deformed, they had no makeup, and their eye bags could obviously make the little doll call their grandmother, with sharp eyes like an eagle.

Finally, the young blood technologist took off pushing the blood supply car like a small plane.

"Less than five minutes later, at three o'clock in the morning, all the medical staff entered the operating room. Please let's pray for the safety of the patient."

In the operating room, when LV Shuyan saw Zhang Fan, the girl's heart was stable and her crying cavity was gone. She quickly said: "it was natural childbirth. Suddenly, the pregnant woman had respiratory distress, cyanosis and rapid decline in blood pressure

At present, the patient's blood pressure... "

"Come on, caesarean section!" Zhang Fan nodded and said.

In this case, almost all the surgeries Zhang Fan went to were the chief surgeon.

Many people don't understand the power of this disease. It can be said that a patient with amniotic fluid embolism, even in the head hospital, should mobilize the main doctors of several departments to go all out. If the hospital is a little more, it is almost necessary to mobilize the energy of the whole hospital. Once the time is lost, or the corresponding rescue measures are a little wrong or delayed.

The final result is that immortality is disability.

After embolism, many pregnant women gave birth to children. As a result, the pregnant woman has become a vegetable since then.

Even if some parturients are in shock, they still maintain a strong uterine contraction and let their children be born, while parturients lose their lives forever.

Being a mother is strong. It's really not fun.

In the operating room, Zhang Fan and LV Shuyan stood face to face and cooperated quite skillfully. The activities of their hands were as fast as those of Jianghu experts.

"Can we shoot? Don't worry. We won't shoot privacy. We just want everyone to feel the tension." The faucet asks Wang Hong.

If there are other things, Wang Hong will definitely decide. Although Wang Hong is like a rabbit in front of Zhang Fan, people and animals are harmless, don't forget that she is now the director of the hospital office. Sometimes speaking is more useful than Lao Gao.

This time, Wang Hong didn't dare to make a decision, because she knew that Zhang Fan's most important thing was that others participated in the operation, and he was not happy even to speak in the operating room.

Wang Hong glanced at Lao Chen.

Lao Chen sighed in his heart, "Why are these demons so evil? This goods are enlightened."

"Yes, but there can be no more people, and they can't talk and affect the operation."

"Good!" The faucet verbally agreed!

**Chapter 1545**

"The doctors have already started the operation. At present, I don't know how the patient is. But looking at the expressions of the doctors and nurses in the operating room, it is estimated that the patient has not passed the dangerous period. Ladies and gentlemen, this is the operating room of the gynecology building of tea vegetable hospital. I just inquired about the disease of amniotic fluid embolism.

I was in a cold sweat. This kind of disease can be said to be a near death. I just talked to the vice president of chasu. He said that almost every month, chasu hospital will encounter such an operation. In order to protect patients' privacy, we didn't aim the lens at the operating table, and we didn't enter the operating room for a sterile environment.

Now it's just a special dialogue column for you in the channel outside the operating room. Through the narrow glass observation window, we can see the equipment in the obstetrics and Gynecology operating room of tea vegetable hospital. Even in the early morning, there are operations in all the operating rooms here. "

The nozzle is also to make the program not boring. The camera is aimed at various equipment in the operating room. Lao Chen is actually afraid of broadcasting after the failure of the operation. As for shooting, it doesn't matter to him. Shoot whatever you like.

If Zhang Fan is not on the operating table, he will never let the faucet shoot. It's not what he's afraid of, but that NIMA has just cried and is poor. Now all the equipment in the operating room under the camera has been exposed, even ordinary people. Experts will definitely say at a glance that Zhang Fan will pretend to be a big tail wolf. In a gynecological operating room, it's already like this. Is it good to cry for poverty?

But now Zhang fan can't attend to it. On the operating table, "you're in charge of the child, I'm in charge of hemostasis, and I'm the secretary. The blood pressure is going down! Lao Ju, find a way to keep the pulmonary edema down."

The belly of a pregnant woman is like rotten cotton wool, which is different from the patients on the platform, because the skin is enlarged during pregnancy. At this time, the thin scalpel will crack like a ripe tomato.

Cut open the skin, cut open the uterus, LV Shuyan's hands went deep into the uterus like an excavator, and her hands were like a shovel to hold out the child.

Because of embolism, the child who should have been pink is like a big purple eggplant. In adult

pigmentation, hypoxia does not seem obvious, especially the older the age, the less obvious it is.

The child is different. When a normal child comes out of the mother's womb, although Zou Baba is like a little old man, it is absolutely pink. The powder is red, just like the faint pink painted on the girl's makeup face. What's Zhang Fan's name? I don't know. It's that color.

But once hypoxia, it is also extremely obvious.

The child like the purple eggplant was held out by LV Shuyan. LV Shuyan's two finger zen was directly stuffed into the child's mouth and dug out the fetal fat and meconium. It was too late to use the breathing mask. He tore off the mask on his face, and then took a mouthful to the child who hadn't washed his face for more than ten years, wrapped the child's nose and wrapped the child's mouth.

And this scene shocked the faucets, and their blood was on their heads.

While blowing, press two fingers on the child's small breast (a) head and keep pressing.

"Turn up the temperature of the air conditioner and turn on the heating light!" The head of the nursing department on the operating table gave orders to the itinerant nurses in a sharp voice.

Two instrument nurses, because one nurse could not keep up with Zhang Fan's speed in this kind of operation, made two rounds and immediately began to execute the order.

Zhang Fan doesn't care about children now.

Lu Shu's ruddy lips, just like when she first entered the tea vegetable gynecological operating room with Zhang Fan, tried her best to save the child.

After LV Shuyan blew on the purple eggplant, the color was like blue ink mixed with water. It began to fade with the naked eye, and slowly turned white from blue to purple, "oxygen mask!" At this time, LV Shuyan took care to let the mask come up.

The itinerant nurse ate and pulled down the hanging mask, and the infant's mask covered the child's face.

"Incubator!" After LV Shuyan's mouth was empty, she commanded the doctor's orders under the operating table.

Finally, the little purple eggplant recovered, pink like a little mouse, and then began to cry.

The soft cry is like a loud gospel, which makes people inside and outside the operating room breathe a

little!

"Glucose dilution and heating!" LV Shuyan, who was not married, skillfully took the diluted glucose and gently put it into the child's mouth.

After handling the child, LV Shuyan disinfected her hands again. The itinerant nurse wiped the meconium at the corner of LV Shuyan's mouth and put a mask on her, "who is lying on the window?"

Her bitter mouth is still gossip.

"Yang Ma's reporter!" Ouyang said softly.

LV Shuyan took one more look and said nothing. Then she changed into a new surgical suit and turned to the operating table.

If rescuing babies is stressful, rescuing pregnant women is dangerous.

"Hysterectomy, ligation, quick, the bleeding point is seen, Ren Li, blood pressure, quickly find a way to maintain it, as long as ten minutes!"

Venous channels were opened on all limbs of the patient, and the itinerant nurse stood on the stool, squeezing the bag of plasma with both hands like steamed bread. Shock, the patient's blood vessels have no pressure, and the plasma can't get in.

The circulation of the human body, the heart can only be sent to half of the body, how to say, this thing its pressure into the arteries, into the capillaries, the power of the heart has almost been exhausted.

The return of the vein almost depends on the pressure of the calf muscles, which allows the venous plexus capillaries to return to the heart. Therefore, calf muscles are also called the second heart. Many people sit on stools for a day. If they really have no conditions to stand up and walk, please pinch the calf muscles for half an hour.

Don't wait until your calf dances like a green snake or your old calf swells into a pig's elbow. It's too late!

Now the first power is gone. Although the heart beats like a erha, this thing is jumping indiscriminately.

The heart has two terms, heart rate and heart rhythm, which many people can't distinguish clearly.

Speaking of people, the heart rate is fast and slow, and the heart rhythm is the rhythm.

For example, in a fight, you must go up and down one by one, which is the best. Now the heart is one down, and the other is also in a hurry.

Watching a meal, the operation is as fierce as a tiger, and the output blood volume is 0.5!

The heart beats too fast or too slow, and the rhythm is disordered or not. It's like walking. If you don't walk fast, you may trip yourself.

The internal medicine team composed of Ren Li's internal medicine doctors and anesthesiologists kept adjusting the doctor's orders with Zhang Fan's requirements. This requirement is really too difficult.

Ren Li's mouth is broken. Often, her hair is not sparse, so she can't help it.

After more than four hours of hemostasis, hysterectomy and thrombolysis, the pregnant woman was finally asked by Zhang Fan from the king of hell.

In the sky, the sun, like a poached egg, also slowly rises up. It's dawn.

After watching a group of doctors pull the patient back from the death line, he said with lingering fear: "this is the doctor. This is the hospital. It hasn't been more than five minutes from issuing the order to entering the operating room. Now look at the doctors outside. They all dissipated and returned to their original posts.

This rapid gathering and dispersion is the real essence! If every hospital in China can do this, will the so-called doctor-patient disputes and the difficulty of the so-called medical cause be reduced a little? "

Originally, I planned to finish shooting in one night, and then the faucet on the TV the next day decided to have an in-depth understanding of the hospital. The hospital has an attractive feeling, as if it has its own characteristics.

Zhang Fan doesn't have time to accompany him during the day, and Zhang Fan doesn't want to accompany him, because this guy doesn't cooperate with himself and makes himself cry poor. What's the matter! The country is not very poor now. Who can eat this meal? Can I die if I eat one more bite?

Zhang Fan also needs to integrate the statistical analysis of data after TB drug injection in the morning. After the sharp increase in the number of injections, allergy finally appeared. At this time, it must be solved at the first time. Is it a drug problem or an individual factor.

At present, the number is not large. If it is not handled properly, it will be a big trouble.

Tea is coming from the faucet!

Originally, the hospital was not informed. Zhang Fan was interviewed purposefully. Now it seems that the purpose can not be achieved, so he has no time to talk to them.

But this thing, some things can not go through obstetrics and gynecology. Once you enter obstetrics and Gynecology, there are no secrets.

The next day, the big girl and little daughter-in-law of the tea vegetable hospital were dressed up. You know, they came to the hospital to work. I don't know they thought they came to the beauty pageant.

Ouyang is very busy today. Since he doesn't leave, he wants to know more about the hospital. It's simple. I'm good at this thing! Zhang Fan doesn't like it. Forget it. I'm here!

"Everyone in the hospital put on new white coats!"

"Ouyuan, this is different from Zhang Yuan's idea. Zhang Yuan means to show you how poor tea vegetables are, you!"

"He's stupid, you're stupid. Now the situation has changed. Since you can't cry for poverty, just pull out all the family assets and let them see how our tea vegetable hospital is. Let the plane fly! Let the operating vehicles line up, open all laboratories, operating rooms and ICUs of all departments.

This is our confidence. Don't think we can't do it without giving us money. We can do it and do it well, so that all academicians at home can have time to attend classes in the science and Education Center! "

"Good!" Since Zhang Yuan has given up, now listen to the European court! Lao Chen nodded.

Then the tea vegetable hospital moved. All the people put on brand-new white coats. The surgeons took the special surgical instrument boxes placed in the operation, exaggerated one by one. The physicians picked up the special stethoscope made by marziguo, which they were reluctant to use at ordinary times, one by one.

Huahua road airlines also inexplicably flew around the hospital in an aircraft. More than a dozen advanced surgical vehicles, biochemical inspection vehicles and radiation vehicles stopped at the door of the hospital.

The world's most advanced equipment appeared under the camera, and the eCom of the respiratory department was quietly placed there.

The class scenes of five or six academicians were photographed bit by bit.

The more the faucet is photographed, the more surprised it is. Ouyang on one side keeps putting it first, "well, this MRI is not the most advanced, but at present, there are only two in China, one in our hospital and the other in the bone Institute. It is easy to use, but it costs a lot of electricity!"

"Well, this is the eCom of our respiratory department. All ECOMS in the northwest are here. It's estimated that there aren't so many in the country after leaving the tea vegetable hospital."
