

## Chapter 178

"The patient was hospitalized for three days with dizziness, nausea and vomiting. After completing the examination, no obvious abnormalities were found in various examinations. After physical examination, the attending doctor Hu Zengxiang and I accidentally found that when the patient lowered his head, the muscles at C4 of the cervical spine were tense and had paroxysmal pain. Combined with the signs, the diagnosis was clear, and the compensatory hyperplasia of the lower longitudinal tract compressed the vertebral artery. " Technology is the king of technology. Although Zhang Fan said it tactfully, he took care of everyone's face by accident and interruption. In fact, this is who is more professional, but he has to have a good attitude.

After introducing the diagnosis process, the director of gastroenterology department said, "don't talk nonsense. This patient is not a manifestation of cerebral hypoxia and ischemia. There is no change in curvature of the cervical spine on X-ray. Do you understand? "

"What nonsense? The signs and physical examination are consistent with the symptoms. " Zhang Fan doesn't know the situation. Out of the habit of respecting the superior doctor, Zhang Fan speaks politely.

"Zhang Fan, don't worry. What do you think? Let go and say that director Chen is no longer a doctor in our hospital." Ouyang said.

"Oh! Actually, this is very simple. The ligament of the patient is slightly left than that of ordinary people. Although the perennial desk work and head lowering action have not led to the deformation of cervical curvature, the ligament has been compensated and thickened. If it is not corrected in time, it is estimated that the cervical spine will definitely deform in the future. "

"Nonsense. Imaging doesn't support it. What do you know? Do you say thickening is thickening?"

"First of all, there is no MRI of the neck in the examination of this patient, only X-ray. Can the ligament be seen in X-ray? I can't see how to support you. The president will give you face and say something about you. If you don't give you face and stop your operation, you have no way. You just can't win anywhere. An organization and a system must first maintain their own operation law and will not change because of a genius. Unless this genius can overthrow the system, there is no obedience, You can be denied directly. Don't believe it, especially this national medical system. You cow, try it. Old clock cow? That's far away.

No matter what kind of cow you are, if you want to mix in your physique, you have to take care of

others first. Today people say something about you. You think you're a cow. You've left your white coat. What about tomorrow? What if you meet a tougher leader again?

Yes, you can go to private hospitals to earn a lot of money, as much as countless money, but for a person with a system, money is not the most important. In the health system, no matter how powerful or talented an individual is, he can't get through without a platform behind him. If you don't say anything else, just say anticancer drugs. Pfizer said to stop and don't sell it! China is powerful, but what can you do to me?

The future medical system will pay more and more attention to individualization and differentiation. This goal and concept can only be achieved on a national platform. If you don't come out, you should first be able to mix in your physique. You can't mix in. What about development.

The collective is a group that destroys the individual will. Unless you have begun to lead the collective and can't obey it, jump out of the public hospital, go to a private hospital or open your own clinic! If you want to open it or not, no one cares about you, so if you want to stand out in any organization, you must first be able to mix it. If Zhang Fanzhen is an outstanding person, he won't come to the frontier and go directly to the south!

In addition, this leadership concept varies from person to person. Putting the picture in the county hospital is mainly based on the moving interests. After all, the size of a county hospital is limited. The municipal hospital is different. All kinds of people have their own leadership characteristics. Ouyang is an iron lady. She is not obedient. She is already in the position of president. It is reasonable or unreasonable. Her management method is like this. Giving a benefit once will never make you feel at ease. She just wants you to tame. This is a way, There is no right or wrong, only good or bad.

"Well! Good attitude. You are still young and have to walk a lot. I haven't seen genius, but how many can really shine? So now you should not only exercise your medical skills, but also establish a correct world outlook and look at the autobiographies of celebrities. Although there is exaggeration, it will enlighten you a little. You are the only one in the medical system. Remember, don't lose big for small!" Ouyang stood up and said his last words.

"I see! Dean!" Zhang Fan also stood up and said, and then said with a little disappointment, "what exactly is this quota for!"

Ouyang almost smashed him with a tea cup, "honor! Understand, this is an honor. It is recognized by the municipal Party committee, the hospital and the people. Do you think this honor is not as important as a milk gift box?" That's a little cruel.

Zhang Fan quickly admits his mistake! The more developed the economy, the smaller the government. But places like frontier are different. People have a strong sense of honor and discipline. Under heavy snow, both adults and children go to the streets to sweep the snow. The cotton is mature. From the university to the fourth grade of primary school, they must participate in cotton picking activities, and

they must pick a certain weight of cotton every day. You may scoff and say they are stupid.

Let's talk about the militia. On the border, there can be no army, only armed police, and no heavy weapons. This is a contract signed between China and other countries. In fact, there is a lot of dirt between countries. What if the troops are not enough when major events happen? It is impossible to dispatch troops. China still needs to lose face! At least I am also a superpower!

At the command, you go to see the frontier, all green military uniform, without a shoulder tag and without firearms, and a unified shovel handle. One big truck after another took to the streets. There were no millions. At random, more than 100000 troops got up. If we really want to start a war, we will send weapons directly. These people are usually either farm workers or on-the-job employees of various units. They are ordinary people, but they will set a time to train every year. Serious training, live ammunition and death quota!

Special places pay more attention to people's obedience and discipline. Moreover, the hospital also attaches great importance to the obedience and discipline of doctors. Obedience and discipline, not to mention quality, are originally the product of power, but can hospitals not pay attention to discipline and obedience? No, the epidemic is coming. Without normal training, doctors and nurses take off their white coats and run!

Why don't military hospitals be disbanded or reduced? This is the last health defense line reserved by the country for the people or the country! At the critical moment, these people can sacrifice at any time ~! Don't believe it! It's not a bully. This industry is too special. I can't stand any grievances. Then don't do it. The sick can annoy you!
