

Chapter 214

Although Zhang Fan is a little impatient, Nie Sasha doesn't mind at all. She has seen too many talents in the medical field. This little temper is nothing. In front of her father, there are not any experts who pat the table, so she doesn't change her face. She still has a kind smile and says, "Oh, it seems that I did something wrong, which made Dr. Zhang angry, Don't argue with me, please tell me, I will pay attention. I'll compensate you first with tea instead of wine! "

The words of smiling face made Zhang Fan feel embarrassed, "really, I really don't drink much tea. You are free and don't care about me." He was polite and considerate, with infinite sincerity in his tone. Zhang Fan's impatient mood also calmed down a lot. That's what people do!

"Then drink some Tieguanyin!" Ma Wentao quickly took over the conversation. Zhang Fan didn't drink tea, and Nie Sasha didn't want to perform any tea art. After the waiter poured the tea, Qin Rongyu said, "the new hospital in chasu city is ready to start in the spring. How is boss Nie Sasha going to take a stake? "

Because of her father, Nie Shasha has transferred some markets in the northeast to Qin Rongyu. Their ideas are different. Although Nie Shasha also attaches great importance to the basic medical market, she still wants to go in the field of equipment, but this research and development is not as simple as she thought, so she is also exploring a little. Qin Rongyu and Ma Wentao are a little like-minded, Is to establish a private medical group, a medical group with certain influence.

Regardless of R & D, the group has one thing in common, that is, talents and medical talents.

"I have a 20% stake. If you open a branch in the future, I have the right of priority." Nie Sasha said after putting down her tea cup.

This kind of thing is an exchange of interests. If you want to develop, it is inevitable.

"Let me say something, because when I cooperated with Dr. Zhang, it was determined that Dr. Zhang will be the main medical thing in the future." Ma Wentao really hopes that Nie Shasha will not be involved.

"This should be done. After all, professional things need professional people to do. But I have a small request! Can Dr. Zhang use our company's equipment for surgery in the future? "

"No, we must first combine the patient's situation before we can decide. This really doesn't work."
Zhang Fan objected as soon as he heard it. He knew that once he agreed, it would be very troublesome in the future. Regardless of the patient's situation, he directly used her equipment. It was a scalper, not a doctor.

"Hehe, if the conditions are appropriate, can Dr. Zhang use our company's equipment?"

"As long as the conditions are appropriate and the patient agrees."

"Well, thank you, Doctor Zhang. I'll ask manager Yang to contact you."

Although Zhang Fan is excellent and talented now, the days are still long. It's not the time to make a heavy bet. Nie Sasha is not worried about this matter. Take your time. She should also observe and see the height of Zhang Fan's development in the future.

They don't need to talk about the remaining details in detail. Professional managers follow up.

The last duty in ICU will be over soon. In one month in ICU, Zhang Fan experienced various diseases of organ failure. Human body function is like a dam. Once the mouth breaks, it will cost a lot to stop it.

After the last shift, Zhang Fan will be out of school, and Tong Lili will also be out of school. Because of Zhang Fan's relationship, Chen Qi asked the medical department for face. Tong Lili went to the third Department of orthopedics to transfer. Whether she can stay in the third Department of orthopedics still needs Tong Lili's own efforts.

After the night shift, Zhang Fan and Tong Lili can rest for a day, and then go to the medical office to get the transfer form, "Zhang Fan, I invite you to have breakfast! I know a restaurant's breakfast tastes very good!" Tong Lili, who changed her clothes, waited at the door of the Department early.

"Sorry, I really can't today. I just moved and haven't cleaned up yet. I have to go back and help."

"It's just breakfast. It doesn't take you much time. Are you worried that Shaohua is jealous?" Tong Lili's small means began. She wanted to motivate her.

"Well! You are so clever that you can see it! "

"Well!" Tong Lili has nothing to say. She can inspire generals, but she can't laugh. This is a question of scale.

"All right, hurry home and have a rest. You see, your eyes are blue. You've been busy all night."

"No! I ~ ~ "when Tong Lili wanted to be coquettish, Zhang Fan's phone rang, which discouraged Tong Lili who had summoned up her courage ~!

"Master, a patient with a broken palm is on his way. I'm not sure! " Lao Chen called in.

"OK, I'll be right there." Zhang Fan hung up the phone and said to Tong Lili, "you see, it's lucky that he didn't promise you, or he'll break his promise again!" With these words, Zhang Fan is leaving.

"Teacher, take me with you! I also want to see it! " Tong Lili looked at Zhang Fan pitifully and helplessly.

In fact, the best weapon against men is women's weakness. If weakness and tears can't move a man, there's probably no good way.

"Hi! If you're not tired, go! Don't cry then! " Zhang Fan looked at Tong Lili and said.

"Don't underestimate me, I'm very powerful!" The girl who was about to cry smiled at Zhang Fan with her small fist. Zhang Fan shook his head secretly. "Are women born actors?"

If Zhang Fan wants to rush to the hospital as quickly as possible, he can't let the patients wait, especially the patients with broken hands. If the time is later, the degree of danger and the probability of failure will increase exponentially.

Zhang Fan drove away at a gallop. The guard looked at Zhang fan driving a luxury car with a beautiful woman and said with envy: "shit! The pigs have killed all the good cabbages! "

The earliest development of replantation surgery is the Soviet Union, and the level is also the best in the Soviet Union. However, the Soviet Union, a superpower, split, and the once brilliant medical system also collapsed, falling from the peak to the bottom. Therefore, if there is no strong country, a systematic medical industry is the moon in the water!

For replantation, China has really taken over the mantle of the Soviet Union, but the wonderful thing is that in this regard, the development of basic hospitals is not very ideal, but in the top field of replantation, China is leading the world.

Why can't the leading basic hospitals develop? There is a problem of interest involved. Replantation takes a lot of time and people, not to mention limbs, that is, the replantation of a little finger needs to be done under the microscope for nearly an hour, while consumables, just a few silk threads and one or two Kirschner wires, and the doctor can operate for two or three hours, In the basic hospital, you can only get a platform fee of 30 yuan, and 90% of this operation is an emergency operation, so few people are willing to work and study, because doctors also have to support their families!
