

Chapter 215

It can be used to describe Zhang Fan's driving speed. Along Binhe Road, there were few cars and the speed was fast. Zhang Fan rushed to the hospital with Tong Lili. Tong Lili is very curious. Which hospital does Zhang Fan want to go to for surgery! She is a transferred girl and really doesn't know the information in society.

When Zhang Fan arrived at the hospital, Lao Chen had several new young doctors waiting at the door“ Master, everything is ready. Just wait for the patient. " When Lao Chen saw Zhang Fan, he quickly stood up and said.

"Well, this is Dr. Tong. She also wants an operation." Zhang Fan pointed to Tong Lili and said something to Lao Chen. Then he went to Ma Wentao's office.

One night on duty, not sleepy is false, so Zhang Fan is going to have some coffee. This kind of operation is too delicate. If you don't pay attention, it will fail, so Zhang Fan has to use coffee to stimulate his brain.

In the absence of Ma Wentao, Zhang Fan found coffee, instant, took out four bags of coffee and poured two cups. One bag was not strong enough.

"Here, have some coffee, or you'll be in trouble when you doze off. It's time to regret now." Zhang Fan said to Tong Lili. In fact, she doesn't worry about Tong Lili, because two operators are enough for this operation. Today is just to let Tong Lili feel the power of microsurgery.

"Don't worry, I won't!" A little demonstration!

When Zhang Fan poured coffee, Tong Lili had communicated with Lao Chen. Lao Chen appreciated Tong Lili very much. A young female doctor can put down her face and beg for surgery. Her spirit is respectable. Moreover, since she had a practice certificate, Lao Chen has become more and more tolerant and has an elderly attitude.

The patient was a worker of electric welding doors and windows in a township. He didn't know whether it was due to cold weather, slippery hands or the problem of the machine. As a result, a careless cutting machine directly crossed the palm of his left hand and broke the palm of his left hand.

The family rushed to the county hospital. After emergency hemostasis treatment, the county hospital helped save the broken palm and rushed to Ma Wentao's hospital. At this time, the patients and their families entrusted all their hopes to the doctor. The doctor said they would go to whichever hospital they went to!

Ma Wentao's reputation for orthopedic microsurgery has been spread out, and the clinics of surrounding county and township hospitals know it. Moreover, once there is a patient, the doctor also suggests to come to Ma Wentao's hospital. So business is good.

After several months of exercise and self-study, Lao Chen can now do some simple replantation of severed fingers. If it is a little more complex, he is still not sure, and the difficulty of palm replantation is directly doubled than that of fingers.

Replantation of severed fingers and limbs has been very mature according to the current technology, and the survival rate is high. For the broken palm, say a bad word. At present, only Zhang fan can do it in tea vegetable city! The muscles, nerves and blood vessels of the palm are extremely rich, and there are only two places where human evolution is most powerful, one brain and one palm. Therefore, compared with the replantation of the severed palm, it is a highly difficult operation in microsurgery.

The country is rich, and the medical facilities have been basically sound. In township level hospitals, the medical facilities have been quite perfect. In richer areas, it is not uncommon for township hospitals to be equipped with CT, while the northwest is slightly backward, but there are still 120 vehicles.

The characteristic whimper has come from far and near“ Get ready, the patient will come soon. " Zhang Fan has changed his white coat and stands at the door.

Just as the emergency car opened the door, a woman in her fifties, covered with blood on her chest, saw her pick up a young man in her early twenties and get out of the car, "don't worry! Don't worry! Be careful. We have a stretcher. " The nurse said hurriedly.

"It's all right. I can't carry it. The stretcher is too slow." The woman's face turned red, but her steps were steady.

"Come on, help!" Zhang Fan looked and hurriedly said. If you fall and cause secondary damage, the gain is not worth the loss!

The doctor and nurse hurried forward and helped him into the hospital. As soon as Zhang Fan saw that the patient's condition was ok, he was not in a coma, and the county hospital had done pain relief treatment. However, this kind of operation is done sooner rather than later. He said to Lao Chen, "go talk and sign quickly, and the patient will go to the operating room."

The middle-aged woman is the patient's mother. The patient's father died early. The mother and son are running a small business with iron windows and iron doors. They are widowed in middle age. Now their children are so hurt and under great pressure, what can they do? No matter how difficult it is, she has to bite her teeth and insist.

"Let's make a long story short. You can see the specific matters by yourself. Now let's say two points. First, this kind of operation has the possibility of failure, which is not foolproof, and the functional recovery can not be guaranteed after operation. Second, pay the expenses quickly. We'll have an operation soon. " Chen Qifa spoke quickly and handed the signature sheet to the mother.

When the goods arrive at the ground and die, not to mention the patients in this situation, the woman signed directly and said, "doctor, how much does the operation cost."

"Pay 30000 first, and then look at the recovery in the later stage."

"I only have 20000 here. You have surgery first. I'll find a way now!" The woman said anxiously, looking at Chen Qifa with praying eyes.

"OK, go and find a way to get it!" The operation cost is enough, but the nursing in the later stage of this operation is also very important.

The woman's tears swirled in her eyes and said, "doctor, there must be snacks. The child is still young and can't be disabled! really Please! "

"Don't worry, we will try our best to treat your children. They are all parents. Go quickly! I had an operation. " Lao Chen comforted the woman. Everyone has compassion, but it is because some private hospitals go too far that they directly hit the private medical market in China below the freezing point!

Without Ma Wentao's private hospital specializing in microsurgery, today, this patient can only go to public hospitals, and many regional public hospitals have almost no such department. If you want to replant, you can only go to the capital, hundreds of kilometers away, and take a plane. The plane needs the hospital to issue various certificates. It is estimated that it is not complete in a day, so take a bus, Seven or eight hours to the capital, cauliflower are cold! People's hands are not leeks. If they are cut off, they can't grow again. If it's not the misdeeds of some private hospitals, but the healthy development of China's private medical system, it can really alleviate the problem of difficult medical treatment!

Replantation surgery has a replantation time limit, after which there is no hope!

At the beginning of the operation, there are three sterile tables in the operating room, one for broken palms, one for debridement instruments and one for replantation. The debridement instruments and replantation instruments must be separated, otherwise the operation will be successful, and the affected palms will be infected and necrotic!
