

Chapter 239

In the anorectal clinic, Zhang Fan is busy seeing the patient, and Zhao Zipeng helps open the checklist and hospitalization to maintain order. Many, many well-known people keep shouting about how poor the quality of Chinese people is. Seeing a doctor is like fighting. Around the doctor, there is no quality at all, and the minimum right to privacy is not given to others.

This is really standing and talking without backache. With a large population base, the country's medical treatment has only developed for many years. At this level, it can be said that we can be proud of a country with such a short time and such a population.

The fact that patients are surrounded by doctors is not a matter of the quality of Chinese people, but a matter of rules and regulations.

The head nurse in his heart took Chen Yan into the outpatient office, waited for Zhang Fan to deal with a patient, and said, "you see, you scared us swallows, and didn't make it clear. What's going on."

Zhang Fan glanced at Chen Yan and then at Zhao Zipeng. The young man had a wink and immediately went out to have a look. This kind of thing should first be told to the family members, and then the family members should consult with the doctors, and then decide not to tell the patients. Some people with poor psychological quality may run away directly, so they have to guard against it.

"Not very good. I have touched many uneven hard nodules. I have gone to enteroscopy. I hope I have made a wrong diagnosis! Wait until the enteroscopy results, but I think, swallow, you'd better inform his family. You can't bear this responsibility alone. "

"I'll tell my uncle about them now. Zhang Fan, is it really bad? " In general, doctors will never say anything for sure when they don't see the examination, because some canceration and inflammation are very similar. But Zhang Fan doesn't know how many times he touched this thing in the system, so he's sure.

"Well! Go and wash your face. Don't make your brother uncomfortable. "

"Yes!" Chen Yan went to the bathroom to wash her face.

The head nurse looked at Chen Yan and asked, "are you sure?"

"Well, I can't run away! Wait for a quick check. " After Zhang Fan finished, he looked at the time on his mobile phone and said, "it's estimated that he will come out soon. I'll call the pathology department. "

"I'm Zhang Fan from anorectal department. Um! Hello, please ask a patient, male, 43 years old, who had colonoscopy done more than an hour ago. Has his disease been detected? "

"Come out, rectal ulcerative bowel cancer. This is a quick test. The diagnosis will take a few days."

"OK, thank you."

Chen Yan also came. Zhang Fan nodded to her and said, "the quick test has come out. Ulcerative rectal cancer, please be hospitalized. After improving the test, do the operation as soon as possible."

"Well! OK. "

"Let's go first." The head nurse holds Chen Yan and says to Zhang Fan.

"OK."

This rectal cancer has two relative and absolute causes. Generally speaking, it is an uncertain factor and a certain factor.

The uncertain factor is the intake of a large amount of fat. This statement is really incredible. If you eat a lot of fat meat, you may suffer from rectal cancer. Although it feels wonderful, in fact, Europe, America and Marubeni have done a lot of epidemiological investigations on this disease.

In particular, the meatball country has been a sniff at many of the practices, but their medical treatment has really absorbed the essence of China and the Western advantages, and has gone out of its own characteristics. They have clearly pointed out that a large amount of fat intake has a high risk of rectal cancer. Although there are a lot of results, so far, the disease principle and mechanism are not clear. What is the reason? I do not know!

But what we already know is that a low calorie diet, high fiber and an appropriate amount of vitamins and minerals are beneficial, especially some smoked meat. Try to eat less. People are so contradictory. Don't eat more delicious food. Eating more will cause disease, but what you don't like is beneficial!

And the determining factor is heredity! It is very certain that the heritability of familial hereditary rectal cancer, especially some dominant rectal cancer, is almost 95%. Is it terrible? It's really terrible.

Therefore, in China, some old people should first ask about the marriage of their descendants. What they ask is not wealth, but whether there are any bad diseases and customs in each other's family! This

is a simple theory of dominant evolution. This old wisdom of China is not all dross!

This is what we should learn and keep. When our ancestors began to have this idea, Europe still had wild sex naked!

When Chen Jun came, his face was not very good. His job was a deputy section chief of the Bureau of Metrology supervision. Although the medical examination list was not given to him, he had already thought through some things in his middle age. When the doctor of the medical examination department asked his family to take it, he had probably understood it.

"Doctor, I'm here. I won't be given the medical examination list. I want my family to take it. " The mood is very low. Who is not afraid of death? It's false.

"Well, I guess you drink too much meat. It seems that you won't have a chance to eat meat and drink too much in the future. Let me see the enteroscopy report." Zhang Fan deliberately said it very easily.

"Well, it shouldn't be a big problem, but it needs a small operation and hospitalization. First do all the tests that should be done. If you don't pay attention to them at ordinary times, you can rest after a lifetime of illness. "

"Hi! Dr. Zhang, I know you mean well, but I'm not young, and I've seen some big and small things. Just tell me the truth and live with me. If I know it earlier, I can prepare it earlier. You can rest assured that I will cooperate with you. I have a good job and a happy family, and I don't want to die! " Although the tears are rotating, there is a trace of difficult smile on his face. Yes, it is a smile! The smile that insists on life is ugly, but it is a smile! Endless smiles~

"Well! It's ulcerative cancer. I don't know whether it has metastasized, so I'll check it as soon as possible and have an operation as soon as possible. " No way, people have thought very thoroughly. If they don't explain, it may aggravate the burden on people's hearts, so Zhang Fan said after thinking a little.

"Well! Thank you. What do I need to do now? My child is still young. " After hearing Zhang Fan's words, he seemed to have been hit hard, but the blow didn't knock him down. He stood up hard. Because he still has his own expectations!

"Stay in hospital, adjust your attitude, strengthen your confidence, and leave the rest to us. Don't worry, we'll help you out. " Zhang Fan is very firm. At this time, giving others a little support is a little support. Maybe this support is the source of hope for patients to live.

"OK, thank you."

"Dr. Zhao, take Chen Jun to the hospital. Tell the head nurse to prepare a single room. Then improve the preoperative examination. "

"OK!" Zhao Zipeng nodded and took Chen Jun away. There is no ripple in Zhang Fan's heart, because

there are still many patients waiting, and he has no time to sigh.

This is the doctor! Not a robot, but you must have an iron heart!

It's a cool autumn. This feeling is not what the doctor wants to say!
