

Chapter 250

one pillar to prop up the sky!

"Come on, heart failure!" The director in his heart and Ouyang looked and hurriedly said. Ouyang made way. Needless to say, heart failure is too common in hospitals. However, the patient's position is a little funny. It was a very serious scene, but it can't be serious!

Because of the special posture, Zhang Fan and several young male doctors quickly helped the patient sit up. Several little nurses in the emergency department in the distance secretly covered their mouths and smiled! The director of the emergency department rolled his eyes and took a look, but it was useless, not to mention the little nurse. Even many female doctors raised the corners of their mouths. This kind of scene is too rare!

The heart organ is a simple and complex organ in the human body. It's very simple. It's just four cavities and four doors. How to describe it? It's like four connected cavities, just like the engine of a car, constantly doing systolic and diastolic movement, constantly beating out and taking in blood.

This cycle is divided into two cycles, a large cycle and a small cycle. Small circulation is the circulation between the heart and lungs, replacing carbon dioxide rich blood with oxygen rich blood, and then transmitting these oxygen rich blood.

The big circulation is to transfer the blood rich in oxygen to all parts of the body, replace it with carbon dioxide blood, and then recover it. It is so simple, especially like the power system of the car. If the exhaust funnel of the car is connected to the engine, it is directly a property.

It's also super difficult. Heart disease, in fact, is short for cardiovascular and circulatory diseases. The term includes two systems.

The heart is like a house. There are rooms, channels and circuits. The circuits manage the orderly muscle contraction and relaxation of the heart. Once the circulation is not smooth, then there is a problem with the channel. Problems in the path can also cause problems in the circuit, which is a chain reaction.

The heart and lungs are connected. There is a problem with the heart, and then there is a problem with the lungs. Ordinary people can't see the general heart problem. The first thing to show is the problem of the lungs and dyspnea!

When there was something wrong with the lung, the proud brain began to be in a daze. As soon as the carbon dioxide was stored, it was like being drunk and began to feel confused. Then, in order to protect

the proud brain, the body began to tighten the blood vessels of the whole body and send oxygen to the brain as much as possible.

Then, other organs of the body are not happy. First, the kidneys begin to jump back, less urine begins, and then the toxins begin to store. Then, other organs of the body also have problems.

This is the general process of organ failure. The time of organ failure caused by other diseases is not very fast. There is time for doctors in the hospital to slowly stop and block this process.

One heart, one brain, especially the heart, has big problems. All organs fail very fast. Once the kidney can't stop it, there's no chance! Even after the rescue, the sequelae is also very difficult.

Therefore, the rescue of the heart should be quite rapid. The rescue of other organs can be divided according to hours, while the heart is calculated in seconds. Once a threshold is exceeded, the damage is very serious.

Heart failure, drug-induced heart failure. At this time, I don't have time to worry about him. Save your life first! Hospitals are only for diseases, not people, but people are a complex social animal. Often, there is a suffix after the last name, such as the boss!

Because this kind of person is like a spider, involving a lot of relationship lines, and then connecting a lot of energetic people, and a lot of people from around 120 feet.

A woman, a woman in her thirties, and a woman who had just arrived in her fifties“ Sister, go and see what's going on. What should I do if he dies! Sister, come on! " The younger woman said to the older woman, after all, young walks fast.

"What are you afraid of? You can't die! What can I do even if I die! Flirt, you too. I let you in. Is that how you manage him? "

"Sister, I'm wrong! I'm wrong, can't I? " When the young woman looks carefully, she is really like a flower with dew. She is so tender at such an age! It's really not a woman that ordinary people can afford! That's all,

Older women have national character faces and legal patterns. They have round eyes and big nose. They are not beautiful. They are a little heroic. They look cold and frost. Boss Wang's subordinates are very polite to older women, "Dong Li!" Nod all the way.

The leaders of the bank also hurried down the steps, "leaders, please rest assured that even if Lao Wang is dead, I will admit it. Please, for the sake of the past, give us a chance to breathe. "

"As long as Dong Li can come out, we are not in a hurry!" Sometimes, the so-called assets and the so-called collateral are actually jokes.

In the emergency department of the hospital. The doctors began to rescue busily. The director in her heart was the first rescue doctor. She kept giving oral medical advice: "take a seat and droop your legs. Oxygen supply, mask oxygen supply, BiPAP oxygen supply, all monitoring devices are installed!" Her voice was quick and calm. She was the only one in the rescue room. Even Ouyang stood quietly aside! This is her battlefield!

Generally, there is a doctor, several nurses, and a nurse who specially records. The records at this time are all abbreviations, focusing on the abbreviations of time description. For example, in this rescue, all descriptions of the heart director are recorded according to time.

Laymen sometimes feel that doctors do not do their best to rescue, or do not send things, do not do their best. In fact, this is all wrong. As long as it is an operation, an emergency patient, on the stage, no matter what level of doctor, whether he gives gifts or not, he dare not fool around.

Laws and regulations are not for fun. At this time, if the patient dies and the family member reports, the medical record will be sealed directly, unless it is investigated by the superior. So on this occasion, the police are standing behind the doctor. Sometimes they are very helpless. The disease is not a simple problem of right and wrong. It has a certain amount. In fact, doctors are very tangled with using this drug and not using this drug. Use it. It may save people or die. Whether to use it or not is the courage and professionalism of a doctor.

"Morphine, 5mg intravenously. Furosemide 40mg intravenously, push it out within two minutes, time it!" In a calm voice, the emergency nurse next to Ren Li was lying on the high foot tray and quickly recorded Ren Li's oral medical orders.

The doctors are all standing aside, listening to Ren Li's oral doctor's advice, while observing the patient's condition. If the drug can't achieve the effect of treatment, it's the time for the nurse to go out and the doctor to go on.

This is not a good thing. When the nurse can't solve it, it is the beginning of cruelty. Therefore, the nurse is an angel in white. There is nothing wrong. Many of the nurses' treatments are non-invasive treatment, but when the doctor goes up, it is often the beginning of blood. If the patient can't be rescued, it is the time to use the knife. Intra arterial balloon fight and cardiopulmonary assist system all need to see blood.

Ouyang looked at the patient's changes without expression. At this moment, laymen don't understand. How can they know whether the patient has improved? A very simple observation method can see whether he has peed!

The human body's self-protection mechanism gives priority to the brain. Once the condition changes for

the better, the blood will be quickly poured into the kidney. Once the blood is poured, there will be filtration, and once filtered, there will be urine!

From the beginning to the end of the rescue, Ouyang only said one word. Because Ren Li's technology was better than her, she would not interfere with Ren Li. It was because the little nurse hesitated when holding a pillar to hold the sky. Ouyang said a word with a green face: "insert!"

The patient's state can be said to be between shock, and the first step is shock. During the emergency rescue in the emergency department, the door of the emergency department was knocked gently.

Ouyang turned his head and saw that it was an officer of the Health Bureau. The little officer waved to Ouyang. The rescue room was really a place where people were not allowed to enter unless they were asked. There were nervous figures and serious scenes in it, and most people dared not enter.

"What's the matter?" Ouyang's voice is a little impolite. It really shouldn't disturb her at this moment.

"Mr. Li wants to know about Mr. Wang's condition." The little officer said quickly. He did not dare to disrespect Ouyang. He could not point out that Ouyang would be the head of the health bureau that day.

"Nothing can do. I don't have time to rescue the patient now!" Ouyang was originally disgusted with this kind of people. In addition, a businessman had great pomp and even commanded the people in the Health Bureau. She was not ready to give face.

"Are you the president of the hospital? It's a big breath! " President Li appeared and gently pushed away the director of the Health Bureau.

"It's not up to you to judge the tone." Ouyang glanced at the woman and was ready to turn around and enter the ward.

"Stop and tell me what's going on. If you don't make it clear what's going on with my man, believe it or not, I'll go to the CPPCC and complain to the Commission for discipline inspection! "

"Hehe, what's the situation with your man? You don't know? Don't show your teeth and claws here. This is a hospital. If you want to complain, go complain! " Ouyang doesn't pee because of his temper.

"This is the hospital, this is the doctor. Come and have a look. I just want to ask about the situation. Look at her face. Is there any law or anyone else?" The woman was already full of anger. She was angry that her men didn't work hard and that the bank didn't have a face. Now she met Ouyang and didn't give her face at all. She broke out completely.

This woman is not simple. She laid such a big world with President Wang in her early years. If it wasn't for her inability to have children, it's estimated that Lao Wang didn't dare to cheat and didn't break his legs. Developed for many years, from leaders to employees of the company, it is not respectful,

reasonable and restrained to her.

Now, whether Lao Wang can or not, she will have a reason to ask the government for trouble and alleviate the repayment pressure. Maybe she really hopes that the hospital can't save Lao Wang! Money to a certain level, although there is no difference, it is actually wrong. When it reaches a certain level, it can be transformed into power.

Rights are addictive to such people like drugs.

"Is that how you treat the patient's family members? Is that how we pay so much tax a year? You must give me an account, or it won't be over today! "

"Mr. Li, calm down. Mr. Wang is still rescuing!" The president of one of the banks hurried out to calm down.

After all, this is the door of the emergency room. Ouyang doesn't want to quarrel with her. She doesn't want to affect the doctors in the emergency room.

But President Li, this woman is not finished. "What's the point? If such a person can become the president of the hospital, what hope can the hospital have? If Lao Wang is buried here today, can you take the responsibility? Rubbish! Garbage hospital! "

"Security section, go, push her out! If you want to complain, go now! " This made Ouyang angry directly, and she said with a cold face.

The Security Department of the hospital, especially the border security department, is actually staffed. Almost all these people come down from the army and go out for exercise as usual. The security section doesn't care what you are. It just pushes this woman out.

In fact, this matter is in a hurry. The hospital is rescuing. No matter what the situation is, it won't come to explain the situation to you at this time. Do you want to live, die, or sign by your family members.

Today, if ordinary family members would not ask about the situation at this moment, President Li, because he wanted to know the situation early and make plans for the next step, and because he felt that he had a position and should be respected.

Ouyang was originally a little disgusted with such people, and was being rescued, so he was not very polite.

Many times, under special circumstances, the president is required to make a decision. At the time of rescue, there are some special situations and special characters. For example, whether to use an uncertain drug or not must be decided by the hospital president. Therefore, if the president of many hospitals is a layman, it will be over. You can't bear the responsibility and have no corresponding rights. The doctor below doesn't pee on you directly.

Although the security department was pushing, it was actually pulling the woman out of the emergency hall in a disguised form. Ouyang Li ignored several people in the bank and went directly to the emergency department.

Mr. Li, I'm so angry. An originally exquisite curly hair, let oneself be thrown into three or seven points“ Are you all wood? Is it wood standing here? Can't you see me being bullied? Call me. I'll be responsible for the accident. "

Several bodyguards and the middle-level who came to play with President Wang immediately took action. The bodyguards don't say anything. These middle-level people rely on the couple to make money to support their family. Besides, they are not afraid of the hospital security guards. If they are really gangsters, they have to weigh it.

The two sides mingled. The emergency department was nervous about rescuing the patient, and there were hot fists and feet outside“ Dean ~ ~ "the director of the security section whispered to the dean.

"Go and call the male doctors in the hospital. I don't believe it. Money is great? " Ouyang went out of the emergency department and did not interfere with the rescue.

After a while, all the male doctors of internal surgery gathered at the door of the emergency department. When did Ouyang come from? I haven't seen anything, and she is a hot-blooded woman. Afraid of things, for her, not to mention!

"Take off your white coat, count one and drive them out. This is not the place where the gang riots, and the shovel of the warehouse. Ouyang stood on the steps and shouted with a loudspeaker. Male doctors stood neatly in front of Ouyang and in front of the dean who usually cared for the calf.

The director of the health bureau and several leaders of the bank almost fainted. It was too hot. Is this still a woman? Are not directly under the leadership, there is no way to command. The phone started reporting directly. If something really happens today, none of them can bear the responsibility.

Riot squad! police office! He came in a menacing manner. The scene looks like a hot and abnormal situation. In fact, there is really no injury. The bodyguards are not personal enemies against the security guards, that is, they are shown to the leaders. The middle-level cadres of the company can't fight anything. They have no strength in their hands. What can they fight! When the male doctors come together.

The riot squad also came and directly separated the crowd.

"Sodium nitroprusside 5ug (kg. Min) was activated, nitroglycerin was given to the second channel for 10ugmin, and blood pressure was monitored. Dopamine 2ug (kg. Min). " The shouting outside didn't affect the doctors inside at all. At this time, even if the knife is cut outside, it will not affect them, because saving people is their first task and bounden duty.

"Nonsense!" The leader in charge of health was confused and trembled his lips. Ouyang has good technology, ability, and is a superior health doctor, while President Li is a big profit and tax earner, so he is not good at stubble.

He was angry, angry because he had nothing to do with both of them!
