

Chapter 257

AK was sent to the infectious diseases department. Before the laboratory report came out, Zhang Fan had given him medical advice and isolated the digestive tract. Typhoid fever is the disease. The symptom is systemic, but it is actually a fecal oral disease.

This is typhoid fever. Today, if a cholera or plague is found, it can be directly set into an epidemic area. Although it is typhoid, it can also be reported to the higher authorities.

During the Chinese new year, the CDC received the report, came to the hospital for verification, and went directly to the place where AK lived! As soon as the epidemic situation was reported, the leading group of the hospital came. It's no joke not to come.

China has very strict control over this infectious disease. One person for one thing. If the hospital had not been isolated today, the doctors on duty, department directors, competent presidents and hospital presidents could not escape. Those who are light will be dismissed, their practice license will be revoked, and those who are serious will be punished by law!

In this way, many people were isolated. First of all, AK's two brothers were isolated, and then the rest was the CDC. Their action took the police!

Infectious diseases are terrible. One is infectious. The other is that most infectious diseases have an incubation period, and most infectious disease carriers are invisible infection. Even if they are infected, they can't be seen in the early stage. This is its terrible place. They bring stealth!

Typhoid fever has an incubation period, that is, after being infected, it lurks up. The shortest is three days and the longest is 60 days! AK was confused. After entering the Department, Zhang Fan took medicine directly. Zhang Fan was very sure of the disease and didn't have to hesitate.

His four hepatitis B patients, the heaviest boy, left without saying goodbye. During the morning ward round, he found that the patient was absent and didn't appear for two days. Zhang Fan asked his girlfriends. As a result, he didn't know anything except the man's phone number and name. He called to turn off the phone, and the man scattered into the sky like dust and smoke!

The liver of male hepatitis B virus has been swollen, and it is estimated that it will not take long to

appear ascites, splenomegaly, esophageal varices, and a series of diseases will follow. What can I do? No one can find it!

Zhang Fan had a solid Spring Festival this year! This is the characteristic of the Department of infectious diseases. There are two or three kittens when they are free. The doctor is idle and hairy. When they are busy, the whole department can't be busy. The hospital has to send someone to support it!

Zhang Fan is busy. The private hospital can only let Shaohua's father, Shaohua and Lao Chen negotiate to get it. Fortunately, the operations in this hospital are focused on hand and foot surgery. There are two results: replantation and non replantation, and nothing else is involved.

It is difficult and sad to celebrate the new year. This is the oral statement of the ancestors of the former Chinese nation, because at this time, it is difficult not only to make the family members who have worked hard for a year eat better, drink better and wear better, but also to close the accounts of this year.

In modern society, it is also difficult for some people. When ordinary people are preparing for the new year's Eve, they hide around and wait to survive the new year's eve before they dare to go home for a few days, because they are in arrears!

For some normal accounts, if they don't arrive before the new year's Eve, the people who ask for accounts won't ask for them during the new year. At least they have to wait until the Spring Festival. This is a custom, commonly known as an agreed custom, but one kind of account is an exception, gambling!

With the rapid development of the country, vigorous urbanization and demolition, many ordinary people suddenly changed from civilians to upstarts overnight. This wealth came too fast and fierce, and many people were not ready. As a result, their mentality became strange!

When hundreds of thousands of millions or more of funds suddenly make a family no longer have to worry about life, and when the whole village suddenly becomes very rich from food and clothing, there are all kinds of heresies before they have practiced how to control these properties.

Buy a car, buy a luxury car. Buy a house, buy a big house in the city center. Wear clothes, not for big international brands! These can be understood. As long as they go through the early insecure mentality, they can also return to a normal state of life.

But once contaminated with drugs and gambling, the consequences are often more tragic than before the demolition. Many people want to return to the life before the demolition.

Overnight extreme poverty is not uncommon in such demolished families. Even if the demolition

compensation is lost, many people are not only lost, but also in debt.

In recent years, the state has made great efforts to develop the frontier. There are many more young people carrying handbags and wandering around the streets in the tea vegetable market. They have no legitimate occupation and can live a very moist life. They spend money like running water in and out of high consumption places. These people live a rich life by gambling.

On the fifth day of the lunar new year, Chen Feng was sent to Zhang Fan's private hospital by the police, and his left hand was directly chopped off by a sharp weapon. He is a typical relocated household, compensated him for more than three million yuan, lost all the demolition funds in a month, and owed many usury. He was hiding and was finally blocked at home by those who asked for accounts on the fifth day of the new year.

Ordinary people often don't understand this, because gambling and drugs are not good things, so they will unconsciously stay away from this thing.

But in recent years, there are a large group of people who will go and set up casinos wherever they are demolished. They did it so skillfully that the state could not control it without great effort.

First, rent a house, rent a house in a high-end community, and rent 1000 yuan a day! Then set the casino in these normal family communities, and change places after playing at one point for up to three days.

People who participate in gambling do not need to bring cash. These people who participate in gambling are clearly touched by those who set up casinos. They know how much money they have compensated at home and how many houses they have.

The organization of these people is very strict. Renting houses, watching the wind and lending are a strict system. The relocated households who are found out are like lambs to be slaughtered.

It's not enough to lose all. Then they lend usury to these relocated households, and then their life is over. These people who lend money are ruthless and have endless means! The routine is to frighten, frighten family and relatives, and interfere with your normal life.

The more vicious thing is to organize some special patients to ask for accounts. What's more vicious is cutting hands, feet and even death!

Chen Feng, a truck driver in his early years, was not good at running long-distance trucks in the 1980s and 1990s. After the demolition, he sold the truck and became a nouveau riche. It was very boring to have nothing to do every day. He was slowly lured into the casino by some interested people.

He lost all his money and owed millions. After hiding for more than half a year, he was finally blocked at home by those asking for debt. He didn't say much, so he just took the knife and did it. One man knocked over and cut several people, and finally he was chopped with his hand. The chargers didn't expect this man to be so popular. They brought people with some special diseases to disgust Chen

Feng's family.

When things got serious, the police came, ran away, and those who were caught were caught. Although Chen Feng had one hand cut off, he also hurt many people who wanted to pay bills. These people were sent to the municipal hospital.

It was tragic. Chen Feng probably risked his life. He cut five or six of the people who wanted to pay the bill. The wounds were either on his head or on his neck. Anyway, they all went to the place where they wanted to die.

On the fifth day of junior high school, an emergency doctor in the emergency department was busy and his waist was about to break! When the emergency department doctor was busy with suture examination, a patient with excessive blood loss was found to have AIDS!

The patient was thin and weak like a firewood stick. The wind could blow the man away. The wounded was cut the most seriously. His head and skull were cut open!

I really want to thank the state for giving the common people a peaceful living environment and allowing most people to live in a peaceful environment. The state has made great efforts to crack down on gambling, and many people feel that it makes a mountain out of a molehill. This is still a small atypical example. Gambling and drugs destroy many families.

The hospital is a place of right and wrong. There are normal diseases and diseases in special events. There are many such fights and injuries. The duty of doctors is to save the lives and heal the wounded.

But when it comes to AIDS, really, to tell the truth, everyone is afraid. There is no cure for this thing. There are such patients in the hospital, and the hands of the doctors in the emergency department are beginning to tremble!

"Dean, Dean, there is a patient in the emergency department, AIDS, blood sprayed on me! ~"

"Is it in your eyes?" Ouyang's sharp voice can directly break people's eardrums.

"I don't think so. I'm wearing glasses! And it was sprayed on him! " The doctors in the emergency department are crying!

"Are you sure?"

"OK! I wear gloves! " The doctors in the emergency department began to tremble with fear. If the patient doesn't have blood transfusion and blood test, no one will know that he is AIDS.

"I'm coming. You must be careful~ Explain it to the nurses. Be careful! "

Are emergency department doctors timid? Maybe!

When Ouyang came, there was no good way. He quickly comforted the doctors and nurses in the emergency department. It was really different to know in advance and suddenly.

In this way, you have to treat others, because he is a patient! Blood transfusion, treatment, and then sent to the infection department! Because the patient has a fever and cough! Lung disease!

AIDS was called wealth disease in the early years. This disease came from Africa. AIDS has a story in the medical field.

Said it was a tribe in Africa. They live in groups. On the night of the full moon, the tribe becomes an open meeting, and they also have a custom. Like ah San, they like to use divine oil.

Ah San is a little better. He uses drugs. This tribe in Africa likes to kill some kind of monkey and apply blood to the place where men live. It is said to have a magical effect!

Then there is Hu Tianhu. The children of the tribe don't even know who their father is. Because the incubation period of AIDS is long and short, short for one or two years, long for ten years or even longer.

Then, one year, the rich circle in Europe and America suddenly began to explore Africa. These rich people in Europe and America lack stimulation in their life, so they go to Africa to find stimulation, black girl! Wild girls full of original ecology are so exciting.

Then he suffered from AIDS. After stimulation, he returned to Europe and America and continued to stimulate. Then the disease spread all over the world. The United States reported the first case in 1981, and then China found the first case in 1985!

In 2002, there were 70 million registered patients and 20 million known deaths all over the world. The high incidence area in Asia was in Southeast Asia, especially Thailand! Next is the envy of America's meatball country!

Although there are three ways of transmission, in fact, the main way of transmission is sexual transmission. Sometimes, don't be happy. Mess around and call small cards in the hotel.

Once infected, it's too late to regret. Not only yourself, but maybe even your family. The most terrible disease has no specific drugs.

Don't talk about magicians. They are figures set up with hundreds of millions of funds and a super country for some purpose. Do you have hundreds of millions? Can you be someone for some purpose?

No! Then be clean. This disease is really not a joke! And the disease is not far from us!
