

Chapter 297

Vacation, whether it is legal or an international festival in the world. In the hospital, for these hospitalized dogs and transferred dogs, everything is floating clouds, and the hospital does not force you to work overtime. Anyway, the superior doctors, department directors and medical department directors all pay attention to your usual working state and working attitude, and you can do it yourself! It's you who don't care. No one forces you. You can not do what the superior doctor told you. No one says you. It's all on your own.

Because the transfer system of the hospital is the second reemployment of medical dogs, which is a two-way choice. If you choose the Department, you should also be selected by the Department. Otherwise, it will be sad to wait for the hospital to allocate. Corner, marginal department, department with more disputes and less income is your destination. Once the Department is determined, it is really too difficult to change another department. There is no special reason. It is estimated that there is no hope!

If you want to stay in a department, you should first be recognized by the superior doctor who teaches, then by the vice senior doctor of the group, and then by the director, and then the hospital will let you enter the Department. This recognition is based on learning and continuous liver removal, which can be accepted by everyone. At ordinary times, when you decide to be a doctor, the pig dislikes the dog!

It's OK to enter a department through relationship, but you can never raise your head in a technical unit. I'm not very satisfied with my life. Someone will always ridicule you openly or secretly. Because you are different. Even if you have a hard relationship, you won't be welcomed by the director after you enter the Department.

However, there are also special departments, such as the breast department and all major hospitals. This department is the back garden of each leader. The doctors who can enter this department may have average technology, but their contacts are absolutely awesome. Such departments may only have one or two technology masters, and the rest are almost related households.

Therefore, many surgeries that can't be performed by the breast department often pull doctors from general surgery to the stage.

Spring returns to the earth and the weather is getting warmer. Farmers, herdsmen and farm workers are getting busy. The plan of the year is spring. At this time, there are fewer people hospitalized. At this time, there are relatively fewer patients in the hospital. The doctors have a little leisure.

The hospital generously gave all transferred doctors a three-day holiday. Although it is a three-day

holiday, the hospital is not for you. First, it organizes these young doctors to plant trees.

In Northwest China, desertification is serious. In order to protect vegetation, the state has assigned tree planting tasks to each unit according to the number of personnel and the size of the unit.

The municipal hospital is estimated to be the most staffed unit in all units. Therefore, the task of tree planting is not small. The whole mountain of a township subordinate to Chasu City belongs to the scope of tree planting of the hospital. Hundreds of people sprinkled on the hillside. I can't see that there are many people! One can imagine how big this mountain must be.

Shao Hua and her unit also have tasks, but other units have money and directly pay people to help plant trees, but the municipal hospital can't. Ouyang is stingy and will never pay this money.

A group of young people are laughing all over the mountains. It's good for them who live in the city all year round to have the opportunity to come out. Anyway, there are only a few saplings. No matter whether they live or die, they just need to be set up on the top of the mountain. If they die, it's all right. Continue next year!

Zhang Fan hasn't come out for a long time. It's very comfortable to breathe the fresh air in the mountains. The tea vegetable city is in a depression at the foot of Tianshan Mountain. There is a large virgin forest in the East and grassland near Stan in the west, the largest grassland in Asia.

In the north is the snow mountain, which is continuous. In summer, you can also see the snow on the top of the mountain. The snow mountain is the super air conditioner of tea vegetable city. Controlling the weather of tea vegetable City, it is definitely a heavy rain in hot summer, washing the hot and dry city. The wind and sand in spring are also blocked by snow mountains. It is really a very pleasant city

In the south is a secondary forest and some wetlands. The tree planting place of the hospital is to the south. Zhang Fan stood on the top of the mountain and looked at it from a distance. It was a faint green, green after winter.

The mountain forest here is different from that of Zhang Fan's hometown. The hillside of Zhang Fan's hometown is almost always the same color, earthy yellow! Continuous earthy yellow.

"You are lazy! Come and give me a hand. My legs are weak." LV Shuyan saw Zhang Fan standing at the top of the mountain overlooking, so she climbed up the mountain to chat with Zhang Fan.

"Haven't you finished planting?" Zhang Fan pulled LV Shuyan.

"They scrambled for my task." Single and beautiful girls kneel and lick wherever they go. She can't do

this kind of rough work.

"Hehe! That's nice. " Zhang Fan has nothing to say.

"I heard you're going to fix the subject." the breeze blew. LV Shuyan pulled her hair in her ear, turned her head and asked Zhang Fan with a smile.

"Well, but I have to transfer the hematology department." Zhang Fan doesn't care where he knows the news. There are too many PHS in the hospital, especially for a girl with a good face like her. It's too easy to want to know the news.

"And then?"

"Orthopedics! After all, when I entered the hospital, the preparation of the examination was orthopedics. "

"All right!" As soon as Zhang Fan said orthopedics, LV Shuyan thought of her ex boyfriend!

After a moment of silence, LV Shuyan asked tentatively, "is the hand and foot hospital your stronghold?" Everyone has curiosity.

"Almost. Ha ha! " Zhang fan can't say it clearly.

"Ask me if I want a gynecologist to go to the acupoint!" LV Shuyan said a little embarrassed.

"Why are you short of money?" Zhang Fan turned to look at LV Shuyan and said.

"Look at what you said. No one is short of money. I'll prepare a dowry. I'll be old if I don't marry again!" LV Shuyan looked at Zhang fan intentionally or unintentionally.

"Oh, that estimate is not enough. There is only one specialty in the hand and foot hospital, and there are no other departments."

"Well, forget it. When are you going to get married?" After LV Shuyan asked Zhang Fan, she turned her head and looked into the distance.

"Oh, when the house is decorated, we have to get engaged first. The rules in our hometown are very big. We can't get engaged without engagement." Zhang Fan talked endlessly. Before he finished, LV Shuyan, who had been sitting side by side on the mountain, got up and left without saying anything!

Lv Shu Yan Meng together, and the dust she brought almost fascinated Zhang Fan's eyes, "Hey! Why! " Zhang Fan looked at LV Shuyan who was far away and said to himself. Is Zhang Fan intentional? I do not know!

The first day, planting trees, learning for second days, going to the Party school to learn, this study is really too long to see, what is able to say, what is able to speak, advanced, discipline, said very professional! Let these young doctors gain insight! The teachers here are really good. They are good anyway. After learning, I have to write my experience and give it to the leaders of the hospital Party group.

The third day is these free days! Those who have objects and objects are bored. One day, those who have no objects turn around the streets, "Oh! A new restaurant has opened here, oh! Where's a new supermarket? Oh, my God! Beauty! " Single Wang is like a person released from a high wall. He stands on the street and looks at the beautiful woman drooling! Pitiful!

Zhang Fan and Shaohua were supposed to pick furniture, but Jia SuYue and Wang Yanan contacted her early to see peach blossoms. The peach blossom in chasu city is very famous. This time everyone can get together. They will certainly not let go of Zhang Fan with a car.

The two who gave up the original plan can only accompany them to see peach blossoms. Frontier peaches have their own characteristics. They are not the same as those in the mainland. When Zhang Fan first arrived at the frontier bird market, he wanted to buy a peach because he was thirsty.

Because it was located in the northwest, Zhang Fan knew that fruit was not cheap, so he found a pile of peaches that looked flattened and asked, "how much is this peach?"

"Sixteen!"

"How much?"

"Sixteen!"

"It's all pressed like this. It's sixteen!" The boss who bought fruit almost didn't chase Zhang Fan.

Peaches in the frontier are called flat peaches. They are flat. They really look like they have been pressed. The taste is different. The sunshine here is long, the temperature difference between day and night is large, and the sweetness of melons and fruits is high. Even the tomatoes here are sweet.

The spring of tea vegetable city is the season of peach blossom. When spring is really full of the earth, a wild peach forest in surchak Township blooms. pretty Ten mile peach forest, like pink fire waves, burns in the valley. The breeze blows, and the air is full of sweetness. With the spring breeze, the sea of flowers like waves, waves after waves, gently rippling!

Half drunk and half awake, day after day, flowers and falling flowers bloom year after year. The peach blossoms all over the mountain are really intoxicating. Several girls roam in the peach forest. It is estimated that only here can we see such a large-scale wild peach blossom forest. The flower beauty is more beautiful. Shaohua stands in the peach forest, reflecting the flowers and setting the flowers against the people. It is beautiful!

On the way back, three girls crowded in the back row and whispered. Zhang Fan listened with one ear and no ear, as if he heard the Department of Hematology. But Zhang Fan didn't ask. Anyway, Wang Yanan was there. There was no need for him to say anything.

The three-day break ended. Although it was three days, it was actually a day off. But in the words of hospital leaders, as long as you don't go to work, it's a holiday. Planting trees is a rest. Of course, going to the Party school is also a rest. This is not refuted!

Zhang Fan took the transfer form of the medical department and entered the hematology department, the last transfer department in his doctor career. After graduating from this department, Zhang Fan became a real doctor.

Hematology department, the Hematology Department of the municipal hospital is not large. With the development of these years, the Department has been slowly constructed. In the past, there were only two or three people in the hematology department, making blood smears and so on. There is no treatment.

Because the hematology department takes too much account of the hardware and software equipment of a hospital, there are many examinations that need to be done all year round. However, this instrument is expensive and needs special personnel to study before it can be used. Therefore, in the early days, the hospital did not pay attention to this department.

With the vigorous development of the state in recent years and the localization of medical examination instruments, the rapid development of this department has gradually taken place. Although the hospital is not a profit-making unit, the funds allocated by the government to the hospital every year are limited. If an instrument can not produce benefits, the leaders are not willing to support or buy it! This is the disadvantage of the current medical industry.

Once a variety of high-end treatments are applied in clinic, no matter how difficult it is, as long as they can have a greater impact or benefit, it will definitely not take long for them to become popular all over the world.

Simply say an example. Cardiac interventional surgery, not to mention municipal hospitals, has been carried out in many county-level hospitals. Some hospitals that do not even have cardiothoracic surgery can fly up and be bold. Sometimes, I really can't say.

Basic departments that really need to be studied and developed, but no one cares about basic disciplines, such as blood.

The current hematology department is on the top floor of the internal medicine building, next to the dialysis department. Li Qing, director of Hematology Department, is a female director in her forties. Emaciated, hands washed with soap and disinfectant all year round are like dead branches, without a little luster.

Li Qing was originally a doctor in the Department of nephrology. At the age of 32, she was admitted to the blood postgraduate of Di University. After graduation, because her husband and children were in the tea market, she did not stay in the bird market, but returned to the tea market.

At that time, the Dean directly appointed her as the director of the Department of Hematology, and then, according to her ideas, stumbled for several years before the current scale of the Department of Hematology came into being.

However, this department pays too much attention to the support of basic disciplines. Without the support of relevant fields of colleges and universities, the Hematology Department of a hospital can only treat some basic diseases. It's too much to think about doing research.

There are five or six doctors in the Department, and female doctors account for the majority. The work in the Department is not busy, because the population of tea vegetable city is not large, and it has not been polluted by large industry, and the natural environment is pleasant, so there are not many sources of blood diseases.

After reading Zhang Fan's transfer list, Li Qing said to Zhang Fan with a smile: "I heard from the dean that you specifically asked for blood transfer, didn't you? But it's estimated that you'll regret it. There aren't many patients in the Department. There are not many treatment projects that can be carried out."
"

"No, director, our hematology department is unique in tea vegetable city. It's enough for me to study for a long time." Zhang Fan also said to Li Qing with a smile. The director can say no, but Zhang fan can't say no.

People say no, it's self modesty. If Zhang Fan says no, he's brainless!

"Hehe, Dr. Zhang is very smart. He not only has good surgical skills, but also can speak. Then I won't say much. The morning meeting was held this morning. First, you should get familiar with the Department environment and introduce everyone to you tomorrow morning. "

"Good director!" After that, Li Qing went to the clinic. The doctors and nurses in the Department would smile and nod when they saw Zhang Fan. Zhang Fan is no longer a simple transferred doctor. There are thousands of people in the hospital, and almost none of them don't know him.

The hematology department and dialysis department account for half of the floor respectively. There are two special intensive care units, but they are not used at present because there are no patients and there are not many patients in other wards. After a random turn, Zhang Fan began his work after entering the Department and looked at the medical records.

The director didn't arrange who he followed, and other doctors wouldn't rush to instruct Zhang Fan to work. They all know themselves and that Zhang Fan is a special column, so they are very polite to him.

The hematology department began and is the last department to be transferred!
