

Chapter 781

Open exploration, many general surgery, the examination is not clear, open the stomach, many can be clear.

For example, is there a problem with the appendix or other intestinal problems? Open your stomach and see with your own eyes. You can understand everything.

After all, the gas and liquid in the abdominal cavity, like the coiled intestine of a python, can affect the examination results.

But it's different outside the brain. This thing, such as necrosis and degeneration at the bottom of the right side, often shows signs that are not at the bottom of the right side after the onset of the disease.

For example, it is obviously the necrosis of thalamic tract, but the body sign is the patient's nonsense, just like the great God attached to the body.

For a while, he said he was Sun Dasheng. For a while, he had to grab his husband and say he was the sea dragon king. He had to let him take out the hidden golden cudgel!

For example, some patients are as quiet as virgins. They sit there gentle and elegant. They can be called gentlemen directly by holding a teacup.

But once the disease occurs, it will move like a rabbit. The brain is a very thief organ. On weekdays, ordinary people may not be able to get on a bench with a three meter high wall.

But in a dangerous moment, when the dog chased his ass and opened his mouth to bite, a fat man of 200 kg rushed up with a miso, so that he could not go up again in the ordinary environment.

Just because of the chicken thief in the brain, this thing is also very lazy. It's easy not to mobilize all organs to cooperate. Isn't it good to lie down and be an uncle.

After brain disease, the brain can't control the body, and the reserves of the whole body will burst out sometimes.

When a girl is ill, three big men may not be able to live.

Doctors have no way to determine what went wrong. They can only judge it by combining examination and their own naked eyes. Therefore, the more advanced the instrument is, the better the diagnosis is.

The panting tube bed doctor came to the operating room with the examination results and looked at his teacher. Dr. Guo stared at him like a wolf looking at a sheep, as if he was going to peel off the skin and devour him.

The young man's heart is cool. "This guy is going to vent his anger on me again. I don't serve TN. I'll apply for a change when I go out!"

I've begun to plan to change jobs and groups! Since he was not afraid, since he was desperate, he stood in the operating room and began to observe the operation.

The operation begins, craniotomy. This craniotomy is very boring to explain in a serious way. Let alone not be a doctor. Even a doctor has a big head when he listens to the awkward terms and breaks through the positioning of the sky.

Frontal lobe, temporal lobe, pineal gland, hard inside, hard outside, arachnoid, moving, smelling, listening and speaking. Almost all nouns are made by foreigners. After they are translated into Chinese, they directly let the little tongue come to Balala.

These are also some of the simplest medical terms and Doggerels. Doctors outside the brain should not only find out the organization forcibly named by others in the brain.

We also need to understand the muscles and layers outside the brain.

Simply put, for example, the pain near the clavicle. After excreting organ variation, which nerve causes the pain in this place? Oh, it's managed by the nerve from the fifth neck near the clavicle.

Does it hurt near the sparrow? Oh, it's the nerve from the first lumbar vertebra, so the old saying is good. It makes sense that the sour chicken is useless!

And surgery outside the brain is also quite cruel. This thing is just the opposite of general surgery.

Before entering the abdomen, doctors were like Chinese nobles pretending to force them to eat Western food.

Clean your belly first, not only clean it, but also put some butter (iodophor and alcohol) on it, and make the knife and fork well. It feels quite tall.

Once you enter the abdomen, your nature is clear. Holding a knife and fork, you run to the fat intestines, cecum and appendix, and the taste is strong, otherwise you can't show other people's hobbies.

But it's different outside the brain. Before entering the skull, it's the same as the upstart.

Shave your head first. Whether you are green silk 3000 or board inch peach heart, shave it for you.

Then take an iron frame to fix it for you. This is as like as two peas. I've seen some disgusting videos and I know that the upstarts eat monkey brains.

Like the iron frame of the building, fix your head first. How can you fix it?

In fact, it is a fixed support, which is used to fix the brain. This thing is actually three support hands. Then there is a short nail on each support hand, and the rotating nut is directly nailed to the skull to fix it.

Three nails nailed his head to the cross.

Then draw a circle with gentian violet where the hole is to be opened.

Then, hammer, air drill, bone chisel and bone knife, just like orthopaedic carpenters, began rudely.

First open your scalp with a knife. The one with hair and skin is called clean, just like the pig's head with hair, with white bones.

Then, the air drill opens an eye on the skull, squeak! Squeak! At the edge of the circle, start drilling along the line.

It can be made into a circle, a fan, or a peach heart, just like some people's hairstyles.

Bone meal is flying all over the sky! The fat and blood in the bone volatilized for a time, and the smell of barbecue was burning.

Sometimes, when playing the skull, I don't know whether the doctor's technology is bad or whether the skull looks like the cover of lunch meat, and the quality is not up to standard.

Opening the eyes is like making a pull ring. As a result, the hard work is broken and open! The lid didn't pry open and the pull ring broke!

That's only for the rougher, bone biting forceps.

This thing is like cutting nails with a nail clipper when dealing with the skull. After biting off all the bones bit by bit, the brain kernel inside is revealed.

How can a normal brain say that, in fact, it is like a fat meatball, really like a big lump of fat meatball

with blood, rolling slowly in the Wen hot pot.

This thing in the skull, slowly like a twitch, and like a contraction, like what kind of alien mother nest in an alien movie.

When you open the brain, the normal brain is like a big girl who has not been out of the cabinet. It will be shy when you see a strange man, and the movement will slow down, just like hiding.

And this kind of brain mutated by (a) poisoning is just like erha releasing the door. It can't be pulled. When you open the skull and see the brain.

This thing is not only excited, but also like a sudden explosion. It keeps shouting: come on, come on, I won't hit you.

It's really a piece of fat flying meat. It seems that there are countless parasites crawling in it.

Zhang Fan takes Xue Xiaoqiao and enters the skull very quickly. After all, Zhang Fan is also an orthopedic doctor. It's very easy to do this kind of bone window opening.

Lao Li was sucking the smoke from the electric drill with a suction device like soy sauce.

Lao Guo has not adjusted from shame and annoy. He will watch the head nurse grind his teeth and watch his lower doctor cut his teeth.

It's estimated that I fantasize about being the Dean, what's wrong with the head nurse, and what's wrong with the doctor. I'm still trapped in endless taste.

The young doctor who made up his mind to change the group did not blink. He doesn't know anything else, but one thing he can be sure of is that a doctor who can open a throwing knife in the third class hospital in the provincial capital must have kung fu.

"Turn the fixing bracket!" After entering the brain, Zhang Fan looked at the peristaltic brain and gently said to the itinerant nurse.

The itinerant nurse turned the angle carefully.

"Good! Zhang Yuan, how about this angle?" Xue Xiaoqiao kept directing the itinerant nurses on the side.

"Yes!" Zhang Fan looked and nodded.

"Adjust the shadowless lamp!" After fixing the position, Xue Xiaoqiao was busy telling the nurse to get the lights.

When everything was ready, even if it was into the skull at this time, all the original rough instruments

came out at this time.

At this step, the elegant, fine and accurate side of the extrabrain doctor comes out.

Instruments, such as attractors and conventional attractors, are actually a large straw, just like a thick straw for drinking pearl milk tea.

You put your mouth on the other end of the straw and suck it fiercely. Any fecal residue and blood clot in your abdominal cavity can be sucked out. Sometimes if you don't pay attention, you can suck in the intestinal wall.

The attractor outside the brain doesn't work. It's not straight, but like the picture that scares men in Brazil's no smoking advertisement.

The attractor is vertical, at right angles, and the suction port is quite thin. If it is a straw for drinking pearl milk tea, the attractor outside the brain is a straw for drinking wife's oral liquid.

The width units of all instruments, tweezers and pliers are mm level, which is quite fine, and these instruments do not look thin and narrow, but the hardness is unimaginable. It is estimated that the materials used for these devices outside the brain are more difficult to manufacture than other ordinary instruments.

Carrying a Rhoton gun with a length of more than ten cm, Zhang Fan began to prepare for the focus.

This thing is like a long needle. It is long and thin. There are cross shaped serrations on the 0.5mm needle, which is to prevent too thin needle from generating cutting stress on organs.

"Current stimulation, wake up the patient!" When he was ready, Zhang Fan began to give orders to the anesthesiologist.

"OK, Zhang Yuan, wake up immediately!" The anesthesiologist immediately turned on the switch of the electrode attached to the patient.

Extrabrain surgery, the wonderful work is here. Often a lot of organs to be removed, is it the patient's brain functional area?

Sometimes it's hard to say. What should I do? I can only try it bit by bit under the condition of semi anesthesia.

6mA current passed through the patient's body. The girl didn't wake up after convulsion for a while.

"Well!" The anesthesiologist was embarrassed. This current can definitely open ordinary people's eyes, but the girl twitched her hips!

"Well!" Zhang Fan was also embarrassed. The needles were ready. As a result, no one woke up.

"Increase the current?" Zhang Fan asked uncertainly.

In the past, most anesthesiologists were part-time surgeons. Later, as the discipline became more and more refined, such as craniocerebral surgery, they were not professional anesthesiologists, so they could never get drugs down.

Therefore, there is no problem with conventional anesthesia. Zhang Fan is a little uncertain about this high-level anesthesia.

"Zhang Yuan, no, if the current increases again, it will cause abnormal heart rhythm!"

The anesthesiologist said awkwardly that at least he graduated from a doctor. He really hasn't seen such patients.

"Short acting barbital hydrochloride stimulation!" I can't help it. I have to take medicine.

Compared with the current, the drug has a failure period and drug resistance. It is not stable without current.

Therefore, conventional surgery generally selects current stimulation instead of drug stimulation, which is also no way.

A little bit of medicine dripped into the girl's lesion. The girl's stimulation became more and more severe, and then she woke up after twitching.

"Start!" As soon as Zhang Fan saw that the patient opened his eyes, he hurriedly said, and then said to Xue Xiaoqiao, "start a dialogue!"

Surgery to remove brain lesions is so troublesome. Sometimes, the doctor actually cuts while determining and testing.

Dialogue, what do you want to do.

First, judge whether she can speak, second, judge whether she thinks clearly, and third, judge whether she can move.

For example, what's your name? The other person answered correctly, which shows that the stimulating area is not about thinking and language. If you ask the other person, what's your name, she said: I eat hot and dry noodles.

So bad, this place can't be cut, and everything will be cut into fools!

Also, for example, come and move my eyes and fingers. As a result, people have been talking with big eyes open for a long time.

While stimulating, Zhang Fan asked Xue Xiaoqiao to talk, "what's your name!"

"Give me a bite! Come on, give me a bite! "

"Well!" Xue Xiaoqiao looked at Zhang Fan helplessly.

Zhang Fan glanced at Xue Xiaoqiao. The meaning was obvious. Find a way to ask me quickly.

This kind of patient is really difficult!

Xue Xiaoqiao turned his eyes and the beads lit up like brother Yixiu!

"OK, I'll give you a sip. I'll not only give you a sip, but I'll also give you some dolantin. See? There's dolantin in this needle. Do you want to eat eszolam? You're good. I'll give you what I ask you to say!"

"Good, good, good!" The bone nail stared at the brain. The girl who couldn't move directly spattered. Really, she pulled the silk down. Just like the clear runny nose with a cold, it pulls the silk flow and pulls it constantly.

Zhang Fan and Xue Xiaoqiao looked at each other. Zhang Fan blinked, which means: ask something conventional. How do you ask the doctors in the provincial central hospital to write medical records?

Does it say: experts seduce patients with poison (a)?

"What's your name?"

“xxx”

"Do you have a boyfriend?"

Zhang Fan immediately glared at Xue Xiaoqiao.

This kind of private question is actually asked in gynecology and obstetrics. Generally, other departments also ask whether they are married or not.

Xue Xiaoqiao glanced and said in his heart, "what do you want me to ask? Apart from these questions, what else can such people ask? Do you ask about Chinese history and geography?"

"Yes, both boyfriend and girlfriend. We sometimes... "

"Ask others!" Zhang Fan stares at Xue Xiaoqiao. Xue Xiaoqiao is waxing. He didn't expect it!

"Well, where did you go to kindergarten?"

With the step-by-step test, Zhang Fan stabbed the other party's brain with a long gun, and then cut it bit by bit.

At this time, the young doctor watching the tube bed of the operation can see it.

"The expert's level is very high!" Because Zhang Fan's operation is not disorderly, it can also determine the patient's brain function. To tell the truth, they can only see it when they invite experts from the capital.

Although he can't see how high-end it is, he knows that this Zhangyuan is very high-end.

Then he turned his eyes and turned out of the operating room. When he went out, he didn't even look at Lao Guo.

"Miss Wang! If you're not busy, come to the operating room and have a look! "

"What's the matter? The patient is dead? " Another deputy chief physician is also paying attention to the operation.

"No, no, the level of this hospital is very powerful, but I can't see how powerful it is. I think you can see it. I'll call you the first time."

"Good boy, have a heart. I'll be right there. " After hanging up, Dr. Wang rushed to the operating room.

There are several Department of cerebral surgery in the hospital. There are many deputy directors in the Department.

The news came out of the operating room, and then a phone call came in.

"Xiao Li, how was the operation?" This is the deputy director of the Department.

"Director, I just wanted to call you. I observed that the operation was very smooth. The patient did not have coma, asphyxia or heart rate. From the beginning to now, the patient's vital signs are particularly stable."

The bed doctor said on the phone.

"OK, I see." After hanging up, the deputy director couldn't figure it out, "orthopedic doctor? General practitioner? Do you have the same name? "

Although I don't seem to understand, I'm not slow under my feet.

The deputy directors entered the operating observation room one by one, "turn on the camera!"

"Hiss!" One after another, it was like toothache breathing air conditioning, which kept coming out between them.

"That's great."

Then, when the deputy directors entered the operating room one by one, the directors couldn't sit still.

"How's it going? How's the other party?"

"Powerful, no less than the director of the capital."

"Director, I think we should have more departments, and the Dean should communicate more!"

This time, the directors in the office did not find an excuse for the meeting, and rushed to the operating room one by one.

Lao Guo's superior, director Chen of the second Department of neuroscience and surgery, was director Chen who found an excuse for the meeting. He entered the operating room with a mask and a wash coat.

He first glanced at Lao Guo and then gently stood opposite Zhang Fan.

"Zhang Yuan, is everything going well?"

Zhang fantou didn't turn. He was never distracted during the operation!

Time, one second, ten seconds, half a minute, director Chen was embarrassed.

Lao Li was embarrassed to death. He knew Zhang Fan's problem. He had an operation and refused to recognize his relatives!

"Director Chen, it's OK. Our dean is a little focused on the operation. Don't think about it!"

"Hehe, it's okay, it's okay, the same, so am I. Either, or I'll give you a hand on the stage? "

Lao Li looked at Zhang Fan, thought about it and said, "well, you will take over from me! I'll take a break."
"

The good man got off the stage and replaced Lao Chen and director Chen. In the face of technology, to tell the truth, doctors are actually quite active, especially in class III hospitals. In this industry, it is like sailing against the current. If you don't advance, you will fall back.

"Has director Chen finished the meeting?" Xue Xiaoqiao watched his director get off the stage. He was a little angry, so he asked jokingly.

"Xiao Xue! Can't you learn from Zhang Yuan for surgery? "

Lao Li's heart is very warm, but for young doctors, they should not only give technical help, but also check their character. This is the old school master's work and life.

"Oh!" Xue Xiaoqiao still respects director Li.

The operation continues. This kind of operation is actually simple.

First test to see if it is a functional area, not a functional area, then stop bleeding and ligate the surrounding blood vessels.

Although the brain is so little, there is a lot of blood supply!

After ligating the blood vessels, the rest is simple.

First jump off the outer membrane with a long gun, and then pick up the bone scraping spoon. This thing is not the thick black of orthopedics.

This thing is like a silver ear scoop. It's very exquisite.

Use the bone scraping spoon bit by bit, just like a child eating white cream strawberry ice cream, dig out the lesions inside and put them into his mouth bit by bit.

Looking at Zhang Fan's technique, director Chen envied, "MMP, youth is good. This technique is stable, too stable. How did you practice this skill ~! "

"Zhang Yuan, ha ha, your skill is really powerful. It seems like the shadow of the director of the golden mean. It seems different. I have stayed in the golden mean for a year. I don't know who you are..."

This is ready to pull the relationship.

"Oh, I'm just a little interested in outside my brain. I usually figure it out by myself!"

The operation was smooth, and Zhang Fan said a word.

"Well!" Director Chen's sweat has come down. Not only director Chen's sweat has come down, but also a group of directors and deputy directors in the observation room, one by one, shouted in their hearts: TN's can be installed too much!

Old Chen Xin said, "you might as well not speak! That's bullshit! "

The thought of pulling a relationship is gone, and the thought of learning some technology is gone.

He thought the young man was too cocky and proud of the cow.

To tell the truth, he was regarded as bragging force, but who let him ask Zhang Fan on the operating table? Zhang Fan on the operating table can answer well!

As for other people's feelings, I'm sorry. I'm having an operation. I'm not in the mood to fool you!

Chapter 782

"Here comes Zhang Yuan? How many subjects do you operate on? "

Professor Zhao Jingjin of hepatobiliary Department 1 looked at the young doctor in front of him in his office.

"I had an operation and saw that there seemed to be a lot of people in the operation room outside my brain. I climbed up the window and took a look. The main knife looked like a hospital.

I asked the nurse in the operating room. It was really Zhang Yuan. He said it was an operation for a patient outside the brain. "

"Oh?" Zhao Jingjin smiled as if relieved.

"Zhang Yuan, can you still do surgery outside the brain?" The young doctor asked curiously. For Zhang Fan, in the hepatobiliary department, from the director to the inpatient, they are eager to get his affirmation.

"Didn't you see it all! Go and write the medical record quickly. Don't let those people in the medical record room ask for the medical record day by day. Go! "

Lao Zhao drove away the little doctor and sat there alone in a daze. "Burns, ordinary foreigners, liver and gall, now they are moving out of the brain again. Zhang Yuan, you are so unexpected!"

After a while, Lao Zhao got up and walked towards the operating room.

When Zhang Fan came, he couldn't help but say hello. He benefited a lot from the new method of central resection of liver and gallbladder tumors. As for Zhang Fan's school, he had to say hello to Zhang Fan.

Lao Zhao knows, and the directors of the liver and gallbladder departments all know. Those who have surgery can't help it. Those who don't have surgery, no matter how busy they are, put down their things and go to the operating room.

Zhang Fan's power is too great in the liver and gall. If anyone wants to be a director of the liver and gall Association in the northwest, the person in front of him is the best recommender.

Although they are registered in orthopedics at a young age, they can look at their school. The master is executive. Almost all the brothers are front-line directors, and the more powerful boss is their parent teacher uncle.

Why is it pro? It is said that Zhang Fan was ostracized and bullied by the golden mean when he was in the capital. Two old monsters of other people's school went to support him when he was flying! What else.

These are the private gossip of several department directors.

Not only the directors of these departments who can enter the operating room are interested, but also the equipment manufacturers are eager to get close to the central hospital.

"Here comes Zhang Fan!"

"Here comes Zhang Fan!"

Just as sheep want to enter wolves, a group of people keep calling for all aspects of relations.

In the past, Zhang Fan was a calf in the eyes of local instrument manufacturers in Northwest China. They thought that no matter how powerful the surgical technique was, where could it be.

No matter how powerful the tea vegetable hospital is, can the number of patients exceed that of the central hospital? Therefore, for Zhang Fan, they are dispensable, better, no, and there is no pity.

However, Zhang Fan's trip to the magic capital not only blew the northwest wind in the medical circle of the magic capital, but also made the world-class equipment companies experience what genius is.

Northwest people are forthright and have dinner with friends. They are poor and have no rice the next day, but they have to fight against the swollen face and rush to pay the bill that day. In the words of northwest people, it is to kick the wall with bare feet, just like a crisp!

I don't know why. Once I become a businessman, I can't. my pride is gone and my courage is gone.

Small and stingy. For example, the local equipment manufacturer used to think that although Zhang Fan's technology was ok, doctors in a small hospital and a small place didn't need to be concerned.

I usually give some regular company benefits, such as tea, notebooks and ballpoint pens. I want to fool the little doctor in this small place with the least benefit.

As a result, Zhang Fan didn't care about the bidding of equipment at all, let alone ignore them, and these people didn't have any thoughts.

But I went to the magic capital. Darling, it's amazing. Operating room CT, the most advanced color Doppler ultrasound, endoscope, as for DR and so on, needless to say. The real gold and silver smashed into the tea vegetable hospital. It was like these things didn't need money.

For a time, several major hospitals in the capital bird city were sour and shouted to tea vegetable: can you use the instruments and equipment? Don't break it!

The local equipment manufacturers in Northwest China are stupid. They are agents for several crops. People first-hand attach so much importance to Zhang Fan, but they don't care.

The local businessman regretted it, as if his gold ingot had been stolen.

This time, Zhang Yuan came to the bird market. If he didn't go again, his head would be squeezed by the door.

Therefore, a group of people looked for relationships everywhere, "director Li, are you familiar with tea vegetable Zhang Yuan? Why don't you take me with you and invite Zhang Yuan to have a casual meal!"

Anyway, the eight immortals cross the sea to show their powers. The stirred bird market medical market seems to have beaten chicken blood.

The large-scale wants to find a way, and the small-scale wants to find a chance to pick up a leak. For a moment, even the top card of the club has been booked in advance!

In the operating room outside the brain, with Zhang Fan digging a little ice cream, the mutated brain tissue was removed.

"Vital signs!"

"Zhang Yuan, everything is stable and no obvious abnormality is found." The anesthesiologist gently reported.

The anesthesiologist admired Zhang Fan for this operation. So I'm quite respectful in tone.

Brain, brain, said this is the headquarters of the human body, not reluctantly. During the operation, I won't say anything first. I have positioned various functions.

Simple, for example, in the brain, the operation is a little bigger, which is troublesome.

Generally speaking, the brain mainly relies on telepathy to issue commands. When the action is big, it involves other brain tissues a little.

The electrical signal is disordered. As soon as the command is disordered, the body will show various signs and symptoms. On the operating table, it is the business of the anesthesiologist.

For example, when the action is large, the heart rate accelerates, the heart rate slows down, the breathing is rapid, and the breathing is inhibited.

Although it's the problem of the surgeon, the pot needs to be carried by the anesthesiologist.

Often extracerebral surgery anesthesia is very troublesome. For example, in this positioning, the dosage is between anesthesia and semi anesthesia.

The patient felt clearly. When the doctor moved her brain, it could be very obvious. Someone was pulling her brain, but there could be no pain.

Therefore, the requirements are very high. Moreover, this environment and clear perception will lead to the patient's emotional tension, which is why most anesthesia should first calm the patient down and enter the sleep state.

A sober patient or a patient who is excited by (a) drugs, the anesthesiologist is ready for rescue before going to the operating table.

As a result, from beginning to end, there were no signs of abnormality, let alone significant changes.

What does this mean? It means that the main knife of this operation is too powerful and accurate. The manipulation is so gentle that patients can't feel it. It's accurate enough that the knife is in place without blood.

The anesthesiologist reported to Zhang Fan like a fan that he felt better about this operation than the

surgical assistant. Goods had to be thrown away and people had to die.

Take a look at Zhang Yuan and these people in their hospital. He wants to kill them and operate with them. There is no high blood pressure. Sooner or later, he will be scared out of high blood pressure.

For a while, the blood pressure was gone. For a while, the blood pressure was too high. The head opened the window was like a water gun. It was really thrilling.

"Still ask?" Hearing Zhang Fan asking about vital signs, Xue Xiaoqiao asked Zhang Fan with dry mouth and tongue when he saw that the surgical focus had been cut almost.

This question is really difficult for our old Xue.

He and the other party are not at the same level. He can't ask questions. He almost asked them once, from the patient's parents' names to their age and hobbies, and almost lost the words Xue Xiaoqiao asked.

She has studied abroad. Xue Xiaoqiao uses English, but the other party doesn't understand it. She studies music. Let's talk about Beethoven.

As a result, when people didn't play the piano, Xue Xiaoqiao almost scolded his mother and asked about each other's private life, which was like opening a yellow tune and entering the underworld.

It's not pleasant to see this today. Tomorrow it's who to rob with. Otherwise, it's to gather people to have a poison lying down. Xue Xiaoqiao doesn't dare to ask. He's afraid to ask for his life again!

"Well, almost!"

Zhang fanlue looked up at Xue Xiaoqiao.

Xue Xiaoqiao whispered in a unique capital Dialect: I'm tired to be three grandchildren!

"Don't worry, handsome boy, promise me a breath! If you lie to me, I can go to your house!" The girl can't speak English. She speaks the capital dialect better than Xue Xiaoqiao.

"Well!"

Zhang Fan almost couldn't help laughing. Really, he was angry and felt sad and ridiculous.

"Hurry, Ma fan, Ma fan shut the skull!" Xue Xiaoqiao said to the anesthesiologist impatiently. Now he is completely tired of the girl.

The anesthesiologist pulled his mouth and wanted to laugh, but when Xue Xiaoqiao said this, he held the medicine in his hand, but it was useless. He looked at Zhang Fan.

"Then take medicine to calm her down and let her sleep!" Zhang Fan nodded.

Anesthesiologist: "OK!"

Then the breathing mask is pressed on the patient's face, and then the medicine is administered from the medicine inlet. The conventional patients, usually one, two or three, directly turn their eyes and sleep.

And this girl, one, two, three, four, five, didn't work. The conventional sedative dose didn't respond to others at all. Although the breathing oxygen mask like a protective mask was buckled on his face, he stared at Xue Xiaoqiao.

Xue Xiaoqiao was hairy. "Zhang Yuan, you have to decide for me!"

"You are very strong, a great man. Are you afraid of her?" Zhang Fan didn't speak. Lao Li said it first.

"I'm afraid. I'm not afraid. She's discharged from the hospital. It doesn't matter if she really finds my house, but what about my object? We're ruthless and innocent here. What if we scare my object."

Xue Xiaoqiao is really scared.

Not to mention that ordinary people are afraid, even ordinary local ruffians and hooligans have to give way to those who suck (a) drugs.

"Don't worry, it won't. It's estimated that when she wakes up, there will be no memory in the operating room."

The anesthesiologist put in a sentence, followed by a sentence, "give a lot!"

"Hey!" Lao Li shook his head. The old man and good man, who had worked in surgery for decades, could still maintain such a weak heart. To tell the truth, it was not easy.

"Director Chen, you should advise her to take compulsory drug treatment. It is estimated that your department should have a lot of experience in this regard. "

Zhang Fan raised his head and said to the second assistant, director Chen of the second Department of neuroscience and surgery of the central hospital.

When the director first came to the operating table, he thought he was also a director at least. The other party would give some face.

As a result, Zhang Fan who underwent the operation was like a different person, which hurt the director's heart.

At this time, he doesn't talk. When others talk, he doesn't interrupt. He is like a wronged primary school student, playing with his fingers in the corner.

He was ignored, boasted and pretended in front of a group of colleagues in the operating room. If he was in a hurry, he would be a little too

So he made up his mind that I wouldn't play with you!

As a result, the operation was about to end. Zhang Fan began to relax and his tone became quite polite.

This politeness made the director's idea a little loose " Maybe people have a special hobby of loving and hating people when they go to surgery? Look again! "

"It's OK. I've met such patients several times. We have an agreement with the drug treatment center. " The director is a little proud.

"I said, you still have experience, the hospital is large, and the other units are confident.

Director Chen took more trouble after the operation and sent the patient to compulsory detoxification as soon as possible. "

"Yes, yes."

Zhang Fan's words are polite and support Lao Chen's face. People, that's actually the case. Everyone likes to hear a good word.

When a person who attaches great importance to himself says a few nice words, being good is sweeter than eating honey.

Zhang Fan said that the defense line built in Lao Chen's heart completely collapsed.

"Zhang Yuan, don't worry. I'll arrange the operation without delaying things at all."

"OK! Director Chen's speech is still very convincing. Close the skull! "

Craniotomy is like opening the cover of lunch meat to eat lunch meat. If you use some descriptive language to close the skull, it is actually waterproof.

Because the mutated tissue is removed, the brain is not like other organs and tissues.

For example, if you cut off a tumor in your stomach, you can pull it around, and you can sew the dug hole with other gastric tissue.

But the brain can't work. You can dig an egg sized pit in the brain or a quail egg sized nest. You can't pull other brain tissues to lick the pit.

If you forcibly pull it over, people are not easy to provoke. If it's lighter, there will be epilepsy, confusion and unconsciousness after operation.

It's more important. It can make you swallow your patient on the spot. So, this thing is not easy to mess with.

What if you dig a hole? Only let the brain grow by itself, like granulation, filled with fat bit by bit.

After the regeneration of other tissues, they can maintain some function, but the brain can't. the regenerated tissues they make are completely fat.

Without a little function, it's a silly white sweet. It's estimated that I'm afraid of being dug again. All the regeneration is fat pimples.

If it can't be filled, it should be prevented from leaking when repairing, because once the blood enters this kind of tunnel, it is the source of infection. It's the same reason that running water doesn't rot and household Cardinals don't bark.

Well, when dealing with this, it's really like decorators doing anti-seepage. First stop bleeding the surrounding capillaries, and you must check it clearly.

Cerebral hemorrhage is not a joke. For example, his girlfriend's fingers bleed. Some men just put it in their mouth. Take it out and have a look. OK!

But the brain can't. If this thing gives some blood, the brain can scare itself to death.

For example, a few milliliters of blood, older patients with brain atrophy can resist a little. The younger, the more obvious the symptoms are.

If it exceeds a certain amount, it is directly brain hernia, which will kill people.

After hemostasis, paste gelatin around the pit like ceramic tiles, and stick it on the brain tissue bit by bit.

"Director Chen, after the operation, be sure to explain to the doctor in charge of the bed about the change of blood pressure. Never be careless. "

Although I have confidence in my own technology, I still specially explained a few words.

"OK, you can rest assured and go directly to special care."

With the head closed, the directors of the observation room lost their words one by one.

What else can we say? People won't be at the same level as us!

Lao Chen looked at Zhang Fan's operation at the end and hesitated, but he still said, "Zhang hospital, we still have a patient. Why don't you stand today? I'm afraid you're tired. If you can't... "

When saying this, Lao Chen didn't dare to look at Zhang Fan. He was deeply afraid of being rejected. Then he couldn't get down. This ladder was built for himself!

"OK, no problem! Not tired at all! " Zhang Fan didn't think about it, so he agreed.

Lao Chen couldn't react. "Shouldn't you meditate? Shouldn't you ask your assistant about the next schedule? "

In fact, after the operation and the operation, Zhang Fan's attention and attitude are different.

After the operation, Zhang Fan is like a sunflower, very bright, very sunny, smiling very reassuring!

Chapter 783

Zhang Fan agreed to the other party's request. To tell you the truth, he wants someone to have an operation to let him go. This is the opportunity.

The effect of self seeking is absolutely different from that of others.

For ordinary people, the medical industry is always covered with a layer of yarn, which makes laymen look hazy forever.

In fact, this industry is so professional and busy that even doctors can't tell their work in words.

The layman looks comfortable, the doctor is too comfortable, the patient prays, the family expects, the red envelope is held, the rebate is installed, don't be too moist, the proper new middle class of China!

In fact, it's not. If you're a doctor without self-motivated people, to be honest, it's too easy to mix up.

To see a doctor for a patient, you can see if you can see it. Do you want to transfer to a hospital? Do you

want to push it to a superior doctor. If you have no desire, you can get a salary and retire. Let alone a superior doctor, even the president can't do anything about him.

But once a little self-motivated, then this line is a bottomless abyss.

You should consolidate the old knowledge, such as blood vessels, nerves and big bones. To tell the truth, these basic things may not be encountered at ordinary times, but you must always review the old and know the new, otherwise when you encounter you, the sick can be scared to death by you.

New knowledge, teaching materials that change almost every year, you have to learn. There is also a big test once every five years.

To what extent? In this way, the five-year examination is so harsh that Chinese doctors force the Chinese Ministry of health not to recognize their own national journals in order to publish their papers!

Papers are not eggs. They can come out with a pout. This thing, if you want to write a paper with high gold content.

So from the day you become a doctor, you have to prepare. Whether you are married or not, whether you are not in love, anyway, you can't really finish it without consuming time.

But time doesn't wait. I can't go to the big exam once every five years. I can only eat ash behind other people's ass, so can I prepare at ease.

Almost everything that can be said is nonsense.

There's no way. I can't do anything else. For example, I found a new drug to treat my cough. Darling, this time, the paper immediately gushed out like endless saliva.

On the effect of new drugs combined with boiled water and the change of mood after taking new drugs.

Only you can't think of it, no one can't.

The harshness of the medical industry is more reflected in the difficulty of doctors' further study. In order to improve their skills, they scrambled for a place.

Then he went happily. As a result, when you enter the operating room, you should give benefits to the people who manage slippers and store hand washing clothes at the door. If you don't give benefits,

people won't let you enter the door of the operating room.

When you enter the operating room, you should curry favor with the nurses on the stage, or they won't give you on the stage!

Really, people without some experience can't study!

In this way, it is more difficult to go abroad for further study at home. The quota is only one a year. Moreover, in super hospitals, those who do not go abroad for further study are not promoted to director, which is so harsh.

The profession of a doctor is very contradictory. It seems that you know countless people, such as sitting in the hall, mixing in the Jianghu, selling vegetables and coal. It seems that there are friends everywhere. In fact, there are few serious friends.

The time is not fixed. We chatted happily together. As a result, we had a phone call and left. The number of times is more than one. Friends don't matter. Instead, friends' wives thought you escaped the bill!

Slowly, people will regard you as a tool man!

In particular, such enterprising doctors have a good saying in China: law is not easy to teach and Tao is not easy to spread. They felt this sentence very deeply.

Scientific research broiler, clinical broiler, to tell the truth, these experiences sound good, temper your humanity and temper your will.

But TN's grinding is good. It's good to say that it's not good. Hey hey!

The director of bird market outside the brain has recently been stuck on the threshold outside the brain, which is embarrassing.

It's hard to go further, but if you don't grasp the tail of years and wait for a few years, it's really like looking at birds and crying without tears!

Therefore, when Zhang Fan agreed at once, the director of the second Department of divinity was just like his first brother in love.

The heart is pounding. It can really be described by a sentence at a loss.

"Thank you, thank Zhang Yuan! You..... "I don't know what to say if I'm grateful. Hold Zhang Fan's hand, which is polite.

"Hehe, learn together, learn together!" Zhang Fan is also proud. Hey, it seems that the extracerebral surgery is going to be upgraded.

After closing the head, the girl wore a metal net made of titanium alloy on her head. The metal net brighter than the platinum necklace was buckled on her head. Through this fishing net like thing, she could vaguely see the slow wriggling of the brain inside.

"Zhang Yuan, why don't you take a break and have some tea." Director Chen turns into a little bee and flies around Zhang Fan industriously.

"That's OK, please director Chen." Zhang Fanben thought that this was just an operation. What could it be? He put ten more in to fight, but look at Lao Li who came with him. This meeting has been a little untenable.

He thought that if he didn't rest, Lao Li would have to resist. There was no need, so he nodded and agreed.

Director Chen of the second Department of brain surgery of the central hospital quickly pulled off the surgical clothes and said to the bed doctor, "go quickly. Today, we must make snacks and take good care of the patients. Special attention should be paid to that this patient is taking (a) drugs. If necessary, please ask someone from the drug treatment center to consult! "

Then he looked at Lao Guo and didn't speak.

Lao Guo was puzzled, "isn't this the expert I invited? Why was he cut off? Is there any royal law? "

Not suffering from poverty, but suffering from inequality. Lao Guo also saw that Zhang Fan was powerful, but it was too late. The director took the lead.

As soon as he left the operating room, Zhang Fan saw Zhao Jingjin and a group of liver and gallbladder directors and doctors rushed over.

"Zhang Yuan, when did you come?" Zhao Jingjin came forward with a smile and shook hands with Zhang Fan.

Zhao Jingjin's greeting is relatively introverted. After all, he wants to impact the position of the boss of the Central Hospital, so when there are many people, he is still a little reserved.

The other directors don't have so many scruples, especially the directors of the third and fifth departments of hepatobiliary.

After Zhao Jingjin and Zhang Fan said hello, they immediately came forward, "Oh, Zhang Yuan, I want to die. You won't come to our hospital as soon as you get married.

I have several patients waiting for your operation! "

Lao Li of Sanke!

"Zhang Yuan, it's Chinese New Year. I've got some snow lotus for you. It's definitely up the snow line. I'll take it when you leave!"

This is Lao Wang of five subjects.

The example of Zhao Jingjin is vividly in front of them. Can they not be moved. As soon as Lao Zhao published a paper, he immediately won the provincial science and Technology Gold Award.

Although it is at the provincial level and seems to have no gold content, this certificate is very useful for doctors with narrow roads.

The directors of several other departments came forward to say hello, "Zhang Yuan, do you have time next week? If you have time, I'll make a reservation first!"

The extra brain directors who came out of the operating observation room were silly. Are they still those cowhide hepatobiliary doctors, or those directors who pride their heads on the ceiling?

This is because it has regional characteristics. The weather in the northwest is cold and the local residents' diet contains a lot of red meat.

Moreover, it is not fat or happy. The fatter it is, the more fragrant it is. For example, when eating rabbit meat, people in Sanchuan often stir fry spicy rabbit head. They eat the same taste. Of course, it has a taste, but the taste from beginning to end is too bad. For example, there are more patients in the anorectal department in Sanchuan than in the dental patients gathered in Sanchuan in several provinces. It is too common to have hot mouth and blood.

Frontier people don't do this. They get a rabbit meat. They dislike it's too thin. They put some fat pork and braised it together. After a meal, the braised pork is finished and the rabbit meat is left. What they eat is a satisfaction.

Because red meat is rich in cholesterol and fat, modern people don't have much physical work and can't consume it.

This brings trouble to the liver and gallbladder, so the northwest is a high incidence area of gallbladder disease.

There are many patients, a large number of operations, and even some senior inpatients cut up the gallbladder.

This is all a joke. One of Li Jiapo's hepatobiliary doctors proudly said to the frontier hepatobiliary doctor, "I can do about 30 cholecystectomy a year! It is estimated that it can rank among the top ten in China. "

The director of Frontier gallbladder surgery smiled gently, "our inpatients are estimated to be able to do so much in a month."

The quantity is large enough, so if doctors improve their technology quickly, they will have a high position in the hospital.

In the past, when hospitals bought equipment and entered instruments, all the ordinary foreigners were shouting, while those outside the brain were watching others' performances in the corner.

Now looking at this group of proud and charming liver and gallbladder directors, they are as polite as primary school students who see the head teacher, and their tongues fall out.

"Hehe, our hospital has been busy recently. I went to the magic city some time ago and left too many jobs.

I'll do something about the operation here. We'll call then. "

Zhang Fan smiled and shook hands with several directors one by one.

"Zhang Yuan, are you finished here? If you are finished, go to the section. Not only do we miss you, but also the doctors in the section are looking forward to you."

Director of the fifth section.

"Well, no! We still have several operations to be directed by Zhang hospital! "

Director Chen was worried outside his head. He finally found an expert who was willing to stand on the stage. How could he let these intestinal cleaners Take Zhang Yuan away.

He's worried.

"Hehe, I'm not finished here. When I'm finished, I'll find you."

"OK, OK, let's go first. The operating room is not a place to chat."

Lao Zhao took the lead in dispersing the crowd. It's no good if he doesn't disperse. The doctors in various departments came out of the operating room and looked curiously.

In Lao Chen's office, Lao Chen was busy taking out the hidden good tea and quickly poured water for Zhang Fan and them to make tea.

"Come on, Dr. Xue, have some tea and listen to your accent. It seems that it's from the capital. Your hometown is from the capital?"

"No, he's a doctor from the capital to support us!"

Zhang Fan introduced a sentence.

"Hey, hey, where can I support? I'm here to learn!"

Xue Xiaoqiao is like this. If you are polite to him, he will be more polite. If you are not polite to him, he is a flawed donkey.

"No wonder, no wonder, young people already have such technology!"

Lao Chen boasted about Xue Xiaoqiao. He couldn't boast any more. He wanted to say what happened to the big city, but Zhang Fan sat next to him. He couldn't say this.

"Director Li, we haven't seen each other for several years. Last time I remember we met at the frontier Stroke Prevention Conference. We haven't seen each other for several years!"

"Yes, director Chen's department is developing very fast. I think the patients in the ward are full."

Lao Li now focuses on the development of the Department. As for technology, he is unable to do what he wants.

"Hey, there are many patients, but many operations can't be taken down. They are all here waiting for transfer."

Lao Chen said reluctantly.

"Yes, it's too difficult to develop outside the brain." Lao Li said with deep experience.

After a few sips of tea, Zhang Fan said to Director Chen, "director Chen, arrange for director Li to have a rest. In the next operation, director Li won't go on and can't do it. Please bother him again."

"OK, OK, I have a lounge in my office." Lao Chen looked at Lao Li with envy.

With such a leader who knows pain and heat, he can not only do things peacefully, but also be considerate of his subordinates. It's really the envy of TN.

"Oh, thank you, director Chen. Old, really can't stand. Zhang Yuan, I'll rely on the old to have a rest. "

"OK, you go." Zhang Fan nodded.

Lao Chen and Zhang Fan entered the second operation.

In the first operation, to be honest, the technical content is too high. This specific disease does not have

spectrum. Although the directors outside the brain think Zhang Fan is very powerful, there is no horizontal comparison. This powerful feeling is not profound.

Listen to Zhang Fan's stand for Lao Chen. This time, more directors will participate.

Chapter 784

The weather in bird market is very strange. It's warm in winter and cool in summer, which has nothing to do with this place. It's serious that dogs die in summer and freeze in winter in this city.

In summer, the sun hangs above your head. It's strong, and it lasts a long time.

From 4:00 a.m. to 11:00 p.m., the car tires can be softened.

In winter, it is more wonderful. There is no rain in the bird market in summer, but in winter, there is not only a lot of snow, but also a lot of snow.

People can't feel a little water in the air. The nose and face leaked outside can be frozen and hard in a few minutes.

And surrounded by mountains, the black smoke of boilers and automobile exhaust in winter directly cover the head of the city like a cover.

It will always give people a feeling that the bird market in winter seems to be cloudy all the time.

The operating room of the central hospital is brightly lit. The director of the second Department of brain surgery wants to invite Zhang Fan to the operating station.

"Lao Chen, don't you want to wait for experts from the capital?" Director Huang of the first Department of brain surgery directly asked in public.

In fact, some departments of each provincial hospital have Throwing Knife experts all year round, and this Throwing Knife expert is fixed and can't be replaced easily.

Just like the sphere of influence, Throwing Knife experts have great power and high technology, and occupy a little more hospitals.

If it's just high technology and no power, it's like a day worker in summer. Where you need to go.

The brain surgery expert who comes to Feidao in Bird City Central Hospital all year round is director Li of the golden mean, that is, the director who has had surgery with Zhang Fan.

The meaning of Lao Huang's question is very clear. He just wants the director of the golden mean to know that Lao Chen let others move his cake, and then has an opinion on Lao Chen, which will affect Lao Chen's position in the hospital.

Anyway, as long as there are people and interests, there will be competition everywhere.

In a hospital, the relationship between people is very special. For example, the doctor outside the brain has a good relationship with another doctor outside the brain.

A director who works outside the brain will never be another director who works outside the brain.

"Can he have an operation? His level has reached the horizon! "

When you go to inquire about the level of another extrabrain director with the extrabrain director, you often get such an answer.

Moreover, many of the division brothers in those years, when they reached the level of deputy director and director, they just didn't communicate with each other and didn't even talk when they met.

Lao Huang didn't know that the director of the golden mean recommended Zhang Fan. Now that Zhang Fan's level is so high, he is willing to stand for Lao Chen.

That's good. If Lao Chen really learns a few skills, doesn't he want to suppress them? Anyway, it didn't take much trouble to speak. I asked Lao Chen in front of many directors.

Zhang Fan has entered the operating room and didn't hear this sentence. But it's nothing to hear. I'm not the Dean here.

"Ha ha, you worry about your patient. Who will fly the knife? It's a matter of the second department!"

Lao Chen didn't want to explain clearly at all. Now he just hopes that the directors of these other departments will know Zhang Fan's identity and status as late as possible.

"Hey, I kindly advise you. If you don't appreciate it, you'll bite like a dog's face. Hey, after director Li knows it, I'll see what you say."

Lao Chen didn't say another word with Lao Huang, but pretended to be very angry and entered the operating room.

"Director, what's the matter with you?"

The bed doctor of the drug addict (a) treated the patient for the first time and hurried to the operating room. The young man was progressive and looked at him.

He clearly saw that his director had a few words with Lao Huang. It was clear that his director seemed to be getting cheap, but why did his director look angry.

His brain began to work. Human spirits are everywhere. He understood, so he asked.

When Lao Chen heard this, he was happy and looked at the young man more, but his face didn't change much.

"Director Huang of the first Department of brain surgery, hey, I'm embarrassed to say he."

Lao Chen was busy disinfecting his hands while talking. He was also busy sneaking a look at Zhang Fan. Really, he couldn't be busy with this job without opening a few openings.

As soon as Zhang Fan heard that it was his own business in the hospital, he didn't interrupt. Seeing that Xue Xiaoqiao meant to talk, he secretly kicked Xue Xiaoqiao's calf.

Xue Xiaoqiao looks at Zhang Fan. Zhang Fan closes his eyes and rests against the wall of the operating room.

He closed his mouth and eyes, and leaned against the wall to have a rest.

If Zhang Fan doesn't interrupt, Lao Chen can't go on.

The doctor in charge of the bed looked at it, but it didn't work. He turned his eyes and continued: "director Huang is a little too much. It's not me. Although I'm a young doctor and say that the superior doctor is bad, I can't help it sometimes!"

"Too which?" He just said a nonsense and didn't say anything, just to talk to his director.

Don't look at a simple nonsense. To tell the truth, many people have worked for half a lifetime, and they may not be able to say it.

And some people, a little transparent, think through. Over time, leaders like to take such people with

them when they do anything. Why, it's comfortable!

Lao Chen had a ladder man and was smooth. "That's wrong. You still have to have a certain respect for your superior doctor.

I can't help but don't talk back to Lao Huang. He's just aiming high. But also superstitious authority, do not pay attention to reality.

Just now he told me we were unreliable! "

"Why is it unreliable?" The bed doctor immediately asked.

"Don't we blush when doctors from lower hospitals come to higher hospitals for surgery?

Zhang Yuan, tell me, if I hadn't had an operation, I'd be able to quarrel with him for fear of delaying your Kung Fu. In this way, I just quarreled with him. It's unreasonable. "

"Oh!" Zhang Fan opened his eyes.

"Hey, don't worry if you're in a hurry. He's such a man with a mouth but no heart. In fact, people are still good! "

"Hehe, it's all right!" Zhang Fan is really fine. He didn't go to his heart. After all, my goal is to brush the amount of surgery, not for money.

If you encounter a small-minded, it is estimated that this old Huang will unconsciously provoke a big winner.

After Lao Chen said it, he would not say more. He was too clear about the reason why he was too late, especially the literati. If he didn't speak clearly, it was enough to have the meaning in place.

After disinfection, old Chen smiled and said to Zhang Fan, "Zhang Yuan, wash your hands!"

"Good!" Zhang Fan gets up and takes Xue Xiaoqiao to wash his hands. Originally, Xue Xiaoqiao wanted to disinfect, but Lao Chen refused, "how can you let experts disinfect? You just had an operation. Hurry up and have a rest. I'll come!"

Just a few words, showing incomparable intimacy. When washing hands, Xue Xiaoqiao said to Zhang Fan, "director Chen is very good!"

"Ha ha!" Zhang Fan smiled and didn't talk much. Xue Xiaoqiao didn't graduate long, but Zhang Fan has experienced too much in this small society in the past two years, so he can't know a person with the way of thinking of students.

Surgery begins, pineal space occupying! Ordinary people can have a ranking for their familiarity with the names of brain tissues.

Brain, cerebellum, pineal gland!

But few people know what the pineal gland does.

In this way, the pineal gland is actually the human biological clock, which controls the body's work and rest habits.

And for girls who love beauty, the pineal gland has a more important function than the biological clock, melatonin.

Many people didn't have a good rest the night before. The next day they got up and turned black. It seemed that they had smoked makeup on their eye bags.

In fact, it is poor sleep that causes the pineal gland not to play its role in melatonin.

In addition, this thing controls the time of sexual maturity. It is estimated that everyone has seen children with some brain diseases, a little older, up to seven or eight years old.

But with an adult face and a scratchy beard, the chicken is already huge. In fact, it is abnormal pineal gland.

Therefore, children must have enough sleep, otherwise it will lead to premature sexual development. Premature sexual development is not a good thing.

Once sexual development begins, other parts of the body stop developing, such as the head, such as the head, so ah, this sex is too overbearing! Don't be greedy, too many circles will be black!

Think carefully, are some people's eyes

Pineal tumor surgery was carried out very early. In 1926, doctors outside the brain had been engaged in this field.

But the failure rate was particularly high. After the operation, the tumor was also removed. However, the patient either hung up on the spot or within a few days after the operation.

The mortality rate is particularly high. Doing this kind of operation in those years is like sentencing the patient to death. There is no return.

Therefore, from the twenties to the seventies, this kind of surgery has not developed much.

Suddenly, one day in the 1970s, in Norway in the ice and snow, a doctor surnamed s estimated that he

was bored with cold. He went through the small brain approach and began to remove the tumor of the pineal gland.

As a result, the death rate was low, and the cure rate was particularly high. When everyone came down, they were interested, and some didn't come to do it.

However, not everyone can make this approach. There is a boss level organ in the way, that is to pass through the cerebellum.

Although the name of the cerebellum seems smaller, it sounds like a brother.

In fact, this thing is the brother in the brain.

For example, people want to eat rabbit meat. People with high skills knock a stick on the rabbit's cerebellum and the rabbit hangs up.

The craft is not good. A stick is on the rabbit's head. At first, it's dead. Throw it on the ground and prepare to peel it.

In a few minutes, the rabbit suddenly came alive. Then, just like the lightness skill of floating on the water, it ran all over the yard and bit people.

Dead once, quick eye!

This is because the poor craftsman knocked on people's rabbit head and brain, but knocked them unconscious.

For example, in the boxing ring, you can't hit the back of the head and commit a foul. There are some elder brother level figures such as cerebellum, brain stem and medulla oblongata.

When a fist or a brick is pasted on the forehead, it usually breaks the blood flow and shocks the other party at most. The hardness of the skull is no joke.

Street gangsters have rich experience in fighting. They quietly walk behind each other with bricks, and then shout loudly, sun thief!

The other party turned his head, and then there was a brick on his forehead, and then he kept warning the people lying on the ground.

Why don't they shoot the back of their head? If you have to shout to make others turn around, do you praise your voice? No, this is because people have experience and know that there is a brother here.

And those behind the head have been shot. It's not a deep hatred. There's no need to kill people.

Therefore, if you want to borrow, you should borrow from your brother's organs. One careless, the patient suffered after the operation.

Let's not talk about the bigger ones. We all know that the smaller complications, such as eye tremor, are obvious.

This tremor is a real tremor. When the other party looks at you, his eyes swing around in his eyes, just like tom cat's eyes turning the calendar.

There is also walking, just like Benshan selling abductions and fooling Lao Fan. Walking is crooked, and walking is like getting drunk.

Such a big complication has blocked many doctors outside the brain from this kind of operation.

But there are still many such diseases, so director Chen of the central hospital wants to take this operation.

Please fly knife, often fly knife doctor left after the operation, there is no chance to discuss and consult, and Zhang Fan is convenient, people are in tea.

For the capital, tea is a lot closer to the bird market. It's not a problem to come every day. Therefore, he is determined to catch Zhang Fan.

"Zhang Yuan, this is a benign tumor, but the tumor is very large. The patient has hydrocephalus."

"Well, surgery is necessary, otherwise there will be problems in other parts of the patient's brain." Zhang Fan recalled the examination he had seen before the operation.

There is water in the brain. It can be said that in addition to overcurrent, the brain and spinal cord also rely on cerebrospinal fluid to communicate.

The brain secretes some special substances and then enters the spinal cord through the channel. The spinal cord digests the substances of the brain and will firmly support the leadership of the brain.

Without this channel, the spinal cord thinks that the brain has abandoned it for a long time, and it begins to shrink, strike, or even rebel.

"Not too big! Some time ago, we had a much larger pineal space occupying operation on tea vegetable!"

"

Xue Xiaoqiao immediately made a conspicuous remark, which made Lao Chen more polite.

"Hey, we have done little. This time Zhang Yuan must give more guidance!"

"OK, let's start!" Zhang Fan nodded gently.

Where is the pineal gland? According to anatomy, there are few people who understand it.

Don't be a doctor outside God or inside God. Ask him where the pineal gland is, and you can stutter him.

In this way, the brain is like a maggot, fat maggot, white and tender crawling in your bowl.

Not only does it climb in your bowl, its mouth desperately wants to lick its ass, because it is too fat to lick.

It is so bent that its head and tail are desperately connected, but it can't be connected.

The cerebellum is at its tail, like the prolapsed head of the cecum, and the pineal gland is between the cerebellum and the brain's mouth.

There are a lot of things here. There is also a channel, the channel that connects the brain to the spinal cord.

Most of these secretory organs lie near this channel. Because of convenience, the things they secrete can enter the channel and reach the whole body at the first time.

It can also be said that the brain and cerebellum wrap these organs.

In the past, the operation entered from the brain, which would destroy the brain, that is, to open a hole from the fat maggot's body, explore the bottom to the pineal gland hidden in the deep, and then remove the occupation of the pineal gland.

So the death rate is particularly high. Who knows if the drilled hole has broken the important tissue of the human brain.

The later invented approach is to sneak in by the side of the cerebellum.

The difficulty of this operation is not resection, but entry. It is very funny, just like young men and women.

Lao Chen is half an old man. As a result, he can't get in. His saliva flows all over the floor, but he still can't get in.

At the beginning of the operation, Lao Chen personally sent the scalpel to Zhang Fan and looked at Zhang Fan with eyes.

"Hehe, Xue Xiaoqiao, you two help, let director Chen one help." Zhang Fan said to Xue Xiaoqiao with a smile.

"OK!" Under Lao Chen's deliberate flattery, Xue Xiaoqiao thinks Lao Chen is a good man. It's nothing to let him go.

Lao Chen looked at Xue Xiaoqiao gratefully and blinked a few times.

Xue Xiaoqiao didn't understand. He was quite puzzled "What's wrong with this guy's eyes? "

If the bed doctor or Zhang Fan of the drug addict (a) sees it, you will understand. This means that there will be a later report!

Baby, still lack of practice.

The position of this operation is different from that of the previous operation.

The posture of this operation is very special, just as many people lie on the operating bed during health massage, and there is a hole in the bed.

The patient put his face into the hole to prevent suffocation.

Then the head stands up and shows in front of the doctor.

In fact, the human skull is not a whole piece, just like the land area of the earth. This thing swims when the fetus is born.

The human skull is probably a personal word seam. You touch the place where your hair turns. That place is usually where the three bones meet.

And this piece of cerebellum is too big. What if it is lifted as a whole and the damage is too great.

The bone opening method here is really the same as eating a can.

In the early days, cans were unthreaded, just covered with an iron lid. It is estimated that greedy people of some age have done this job.

Take a screwdriver and open it bit by bit. You can't close it in one place, otherwise you can't open it.

This cerebellar skull is actually the same. First open the hole, and then pry it bit by bit with a screwdriver between the holes.

After prying the skull. The cerebellum came out. There is a saying that this is how to lift the celestial cover. This is not the celestial cover, but the back of the head.

Crackling, really crackling. With Lao Chen and Xue Xiaoqiao, Zhang Fan opened the back of the patient's

head very quickly.

Lao Chen's heart is beating his mouth.

"Zhang Yuan's hands are too sharp. The feeling of bone manipulation is more sharp than the director of the golden mean."

He only knows that Zhang Fan is an expert in general surgery. Where does he know Zhang Fan's registered orthopedics!

The Department where Zhang Fan started was orthopedics, and he made unforgettable efforts in orthopedics.

After working hard, it's certainly not hard to open the back of the head.

Chapter 785

"Note that the dura here must be cut in half moon shape and transverse transverse sinus!"

Zhang Fan explained while doing it.

Open the dura mater and open the dorsal side of the cerebellum. Walk through the tentorium of heaven, pull up the tentorium of cerebellum and cut the arachnoid.

To tell you the truth, it's boring to describe this kind of operation in professional terms. Really, it's like a drunk pressing it out with a keyboard and stacking a large number of random Chinese characters.

I know all the words, but what's the meaning? I don't understand!

In popular terms, this kind of operation is actually a dog lifting the door curtain.

The South doesn't know. In the north, especially in the rural areas in the past winter, a thick curtain that is not much thinner than a thick quilt is often hung at the coldest time.

This curtain is very heavy. If you don't change it in winter, there are many people and hands. A thick layer of oil on the curtain, if it falls down, it is estimated that it can overwhelm women as a door panel.

The dog at home is more difficult to enter this door. He scratched his claws and would be beaten. What to do, he can only use his nose.

Little nose bit by bit from the corners of the door curtain opened a seam, and then the nose into the mouth, then the head, and then the body came in.

And this operation is almost the same. Speaking of it, it's very simple. Cut it, turn it up, expose the cerebellum, and it's over.

In fact, the difficulty coefficient is quite high. Zhang Fan said step by step, "you must pay attention here. You can't cut more. If you cut more, you can't get in. It must reach the middle and outer third of the sagittal sinus. "

"Well, well, well!" Lao Chen's head is like a chicken eating millet. His eyes are wide open. There is no expert to explain this. It's too expensive.

(a) the doctor of the drug addict's tube bed didn't understand. He scratched his ears and cheeks urgently, but the boy didn't give up and directly turned on his mobile phone for recording. After thinking about it, listen more and there will always be goods.

Medical treatment is like this. In a certain field, there are too few opportunities for others to teach.

The directors in the observation room were worried and angry. They couldn't see clearly and could hear clearly.

Moreover, experts can teach hand-in-hand. It's too expensive. They are all people with deep accumulation and thin hair. They're just a little short of being instructed.

My mouth is dry and my tongue is dry. This is clearly the focus of the book before the exam.

They knew by listening. This young doctor, no, tea expert, not only did not hide, but also told the key points and difficulties, as well as his own experience.

It's too valuable. In the past, everyone was Lao Wang. Don't laugh at Lao Zhang. Everyone's level was eight, nine and ten.

But now, Lao Chen is looking for teachers to focus on violations. Can this still work? Absolutely not!

In an industry, there are only a few people who can carry the flag. Whoever comes first will fight first. This thing is like a seat. It's not easy to sit up and down.

So these directors are nervous.

"How many patients with pineal space occupying in the Department?"

"Three experts have no time. Patients can't wait. They curse people every day and scold and cry the little nurses in the Department for several times."

"All right, quickly tell the patient that an expert is coming and is ready. Let the family members prepare the operation expenses and have the operation tomorrow."

"Here comes Professor Li from the capital?"

"I'm the director. You're the director. You can do whatever you're told. There's so much nonsense."

This is the conversation between the Department Director and the following doctors.

For a while, the observation room was full of telephone calls. No one wanted to be backward and no one wanted to be a child, Xiao Ming.

Enter, a little bit. For brain surgery, Zhang Fan is very cautious to tell the truth.

Really, this place is too expensive. If there is a little mistake, it can't be recovered and made up.

Therefore, for the anatomy of the brain, Zhang Fan did not know how many times he turned over and over in the system and in his mind.

Therefore, this kind of access to surgery, zhengerbajing, is Zhang Fan's best. It's so smooth. Lao Chen, who had the operation, thought it was too simple.

"I will, I will, I will!"

Lao Chen kept shouting like a villain in his brain!

The excited hands trembled. Inside the mouth began to stumble, "Zhang, Zhang Yuan, here is not to hang up the cerebellar curtain."

"Yes! Be careful when hanging. Don't make the organization nervous. Be gentle! Gentle! "

"Well, well!" Lao Chen choked. Really, in the past, Feidao, Lao Li's predecessor, was an eccentric expert.

Whenever Lao Chen asked them, the old man would say sarcastically, "I don't know?"

Lao Chen, they all have MMP in their hearts. I know I'll invite you again?

Over time, no one asked. The question in my heart is always a question. In Lao Li, with the development of medical insurance, there are more and more operations.

There are often four operations a weekend. Lao Li doesn't want to say if he is busy. He is too tired in two days. Therefore, there is no time to explain.

Now, Zhang Fan not only allows them to ask questions, but also makes a point when they encounter important places they are not aware of.

Really, Lao Chen thinks about the grievances he has suffered in recent years, and then looks at Zhang Fan's serious expression. Really, he wants to hold Zhang Fan and kiss him!

For benign tumors, the knife should avoid blood vessels and pipes. Gently remove the tumor as if it were an eye ball.

"Tissue bag!" The tumor was cut off.

Complete, without a little crack!

"Great, Zhang Yuan, really great." Lao Chen has no room to boast " If you have time before the operation, you'd better think about the operation process in your mind a few more times the night before. When you do so, it will be more convenient. I usually do non emergency surgery like this. "

Zhang Fan gently shook his head and told them his experience, but he didn't say the system. This thing can't be said.

"Well, I'm like this now. It's absolutely easy to think about it in advance." Xue Xiaoqiao also nodded.

"Well, I'm going to do the same in the future. Thank you, thank you, Zhang Yuan. Your time..."

He also wants to pull Zhang Fan for surgery, but he can't say it. I'm sorry.

Several people walked as they spoke. The door of the operation was opened and the patient was sent to the ICU by nurses and anesthesiologists.

At this time, Hula came in a group of people!

Not surprisingly, it's all directors outside the brain.

"Hehe, alas, what did I say? Tea vegetable Zhang Yuan is absolutely powerful. You don't believe it.

Have you seen it? Have you seen it? Pinealectomy was completed in less than an hour. It is estimated that the world ranking can be entered! "

Lao Huang of the first Department of Shenwai stood in the middle of the crowd and spoke directly at his throat.

Other people keep rolling their eyes. Your sister, when did you say that? When did I say I didn't believe it!

"Hello, Zhang Yuan! I went to Qingniao to study the year before last, and now I'm still in touch with the doctor there.

Dr. Huo and I were in a dormitory. I just called and talked about you. Dr. Huo is all Chen Zan to you.

Your story in Qingniao has become a legend! "

Director Jiang of the three departments of brain surgery is also the youngest. He was in the first Department of brain surgery. His level was good. He peed with Lao Huang in less than a pot. Finally, he worked alone.

"Oh, really. Dr. Huo, are they all right? They haven't been in touch for a while. "

"Everything was very good. I also said that I would give you time to see them."

"Ha ha, where is the time! ~" Zhang Fan said with a smile.

"Yes, I'm in our business. Alas, I can't say. Zhang Yuan, please do me a favor. Our department also has three patients with pineal space occupying lesions. Look... "

Lao Chen and Lao Huang are in a hurry. This bastard has found a new way. Opportunities are always reserved for those who are prepared.

When people said this, Zhang Fan pondered a little. He didn't tempt others, but thought about the work of tea vegetarians, and then looked at the operation volume of the system.

"OK, I'll stay a few more days!"

Zhang Fan said so, director Jiang's smiling teeth couldn't wrap up.

"I, I, I!" Lao Huang is worried.

"You have patients in several departments. You can choose them. I'll try to leave more time!"

Zhang fanle said happily that he was really happy. It was too difficult to upgrade the surgery outside the

brain.

Really, general surgery, you can take the appendix, take the gallbladder, orthopedics, it's simpler, but not outside the brain. It's just a major operation, so the upgrade is too slow.

"Zhang Yuan, let's wash it and go to dinner. It's time for dinner. The places are all booked."

Director Chen watched director Jiang pull Zhang Fan away and quickly interrupted their idea of continuing to get close.

I scolded my mother, "these dogs have such sharp noses!"

Before Zhang Fan spoke, several directors of liver and gall came. I have to invite Zhang Fan to dinner.

I can't help it. Several directors don't give in. I feel like I'm going to be red faced. Zhang Fan hurriedly said, "I often come to the bird market. It's all trouble for you. Don't argue this time. I'll invite you to dinner to show my gratitude."

Zhang Fan said so, everyone can't speak.

"How can you treat Zhang Yuan!"

"Hehe, it's the same. Let's go, director Wang. You choose a place." Then he said to the director of the Fifth Department of liver and gallbladder.

"OK, let's eat Zhang Yuan's today. It's all gone! " Lao Wang said as if he had never eaten outside. He began to talk.

This is for Zhang Fan!

Lao Wang didn't want Zhang Fan to pay, so the reservation was very high-end.

I don't know from which year, private clubs suddenly became popular. It's strange to do business and set their own threshold.

But, more strangely, with the threshold, business is booming. A card, a primary entry card, is either tens of thousands or hundreds of thousands. I don't know what to think. Is it gold?

Although the frontier is not comparable to the capital, there is no place named No. 1 or No. 2, nor is it a place of great popularity in the world.

But in a quiet park, where rockeries stand, there is a small yard hidden.

"Listen to zhuxuan!" Zhang Fan looked around. There was really bamboo. A large area of bamboo was

formed in the greenhouse. In winter, in ice and snow, it was particularly green.

"It will cost a lot of money!" Zhang Fan was surprised as if he had never seen the world, but he didn't ask.

After dinner, Zhang Fan gave up his excuse and went to pay the bill. As a result, he saw a beautiful woman at the door. When he saw Zhang Fan, he came over with a lovely smile.

"Hello, Zhang Yuan!"

"Oh, Hello!" Zhang Fan nodded, but he didn't want to continue talking.

Tea vegetable is educated by Ouyang and the example of Chen Qi is there. Zhang Fan himself is still very vigilant.

"How much is the box for thousands of miles!"

"Thirty two thousand altogether."

"How much?" Zhang Fan's liver trembled. He didn't drink wine. It's so expensive. Only a few people eat dragon liver!

"This trip is in vain!" Zhang Fan wanted to take out his wallet. As a result, the waiter smiled and said, "this lady has settled the bill!"

"Well!" Zhang Fan turned back. The other party still smiled unchanged and quietly faced Zhang Fan.

"Master, this is a master!" Zhang Fan gave a prediction directly in his heart. Because of this smile, he thought of the female leader at a glance. He was unpredictable.

"Zhang Yuan, I knew you would pay the bill as soon as I guessed.

Oh, Chen Qian is there! " Lao Wang seems to have just found out about this lady.

"Hello, director Wang! I heard that Zhang Yuan and you came here for dinner. I'm a little presumptuous today. Next time I have a chance to toast and apologize to Zhang Yuan alone! "

With that, the woman walked away!

"Hey, Qian, Lao Wang, you..."

Thirty thousand is not a small number. The cadres of the plane seat put a tight hoop spell on Zhang Fan every year and month. Can they not be afraid?

"Hey, hey, I knew I couldn't hide it from you. You can rest assured that she is not engaged in equipment, nor is she a drug dealer. "

"Don't talk, tell the truth."

"Isn't it time for a new term? She has some energy in her family. A regional agent who wants to get an endoscope recommended you by Olympus.

Then they did not know what was going on and found me! "

"That can't....." Zhang Fan is a little angry.

"Don't worry, I signed the signature, you see." Saying this, Lao Wang took out the bill.

"Don't worry, I understand. If you're willing to appreciate it, you'll appreciate it. If you're not willing to appreciate it, you'll pretend you don't know.

I'm also helpless. You're polite to you up and down in tea, but in the bird market, I'm a big doctor. I can't help it. "

Lao Wang hung his face!

"Oh, never again!" As soon as Zhang Fan sees that the bill is not his own name, it doesn't matter who he loves.

"Zhang Yuan is throwing knives here. How can you stay here. What about the work in the Department! "

If Zhang Fan wants to stay, Lao Li will go back, but Xue Xiaoqiao doesn't want to go. He wants to stay and have surgery with Zhang Fan.

"Director, just let me stay. Zhang Yuan can't do many operations without tea vegetable. I can practice more here ~!"

"You..." Lao Li couldn't say.

"Zhang Yuan can teach people outside the hospital, why can't he teach me. Director, please! " Xue Xiaoqiao rolled with Lai and didn't go back anyway.

"It's all right. We'll go back immediately after the operation. There's no one here, and I'm not down-to-earth!" Zhang Fan left Xue Xiaoqiao at the exit.

Lao Li had no choice and left alone.

Three days, three days, Zhang Fan kept doing surgery from morning to night. Xue Xiaoqiao's tired legs

cramped.

But no matter how hard it is, I can't say it. I have to do it myself.

"Shit, it's finally upgraded outside the brain."

Zhang Fan lies in the hotel, feels his sore thigh muscles, looks at the system in his mind, and the amount of surgery outside his brain is finally enough.

"It's not easy! Then a new subject appeared in the system. Cardiothoracic surgery, Urology, anorectal Department... "

Dense, "which one to choose, this is a problem!"

Chapter 786

In all operations, the lowest fault tolerance rate is outside the brain. Sometimes, even if there is no error, there may be complications after the operation.

For example, long-term chronic permanent pain, which is still very wonderful. When you are free, it seems normal. It starts with a little mental work, just like wearing a cover on your head, tight and loose.

For example, epilepsy after brain tumor surgery. Really, when the patient went underground and convulsed, the doctor felt very uncomfortable. He saved his life, but destroyed people's normal life.

Therefore, doctors outside the brain are slow to get started, and doctors who teach often don't let doctors get started easily. Doctors outside the brain usually start from suturing broken heads to superficial hematomas.

Therefore, Lao Chen watched Zhang Fan perform the operation. Really, in his head, there were villains shouting again. I will, I will, let me do it.

However, he didn't dare to stretch out his hand. This thing looks too simple. Just like a child, watching others take chopsticks and slip away, he wants to clip eggs, eggs, meatballs and meatballs.

But you can only insert chopsticks into eggs, just like foreigners, eat them, or catch them directly.

Taking chopsticks is not such a thing at all.

Looking at Zhang Fan's operation, the more people understand it, the more they know the Tao in it.

On the first day, Zhang Fan helped Lao Chen with the operation. On the second day, he helped director Jiang with the operation.

On the third day, Lao Huang could hardly wait. With the help of Zhang Fan, the directors of the other two departments had begun to get started.

They are all doctors. They all know too well that each other's time is not free. They can't point to a phone call and leave every minute, so Lao Huang's mouth dried up.

Lao Huang didn't just wait. He stayed at the door of the operating room almost every day. Zhang Fan had an operation. No matter what topic he had, he had to go up and talk a few words to increase his sense of familiarity with each other.

Xue Xiaoqiao doesn't like Lao Huang because Lao Chen dug a pit for Lao Huang in advance.

"Zhang Yuan, Lao Huang is very snobbish! Look at him... "

"Look at people, don't look at your heart, listen to both sides. Besides, we're here to fly a knife.

To put it mildly, we came for money. It's not a blind date or making friends. Just go if you can. There's no need to be too fussy.

No matter what people say, we will always have no problem doing our own work and things well. "

Zhang Fan smiled and said a few words to Xue Xiaoqiao. At ordinary times, Zhang Fan seldom said such words. He didn't say much to Shaohua except to his sister.

Today, that's what I said.

"Oh!" Xue Xiaoqiao seemed to be in a daze.

"All right, just say it. Let's go and have surgery."

On the third day, he finally entered Lao Huang's Department of external medicine.

In the provincial central hospital, the scale outside the brain is the smallest in the major surgery. The three independent departments are particularly slim in general surgery, orthopedics, hepatobiliary, burns, and even in front of Obstetrics and gynecology.

Lao Huang also inherited his father's career. In those years, his father was promoted from the hospital to the Health Bureau as the boss.

After Lao Huang graduated and assigned to the hospital, it can be said that all departments are open to him to turn the sign.

Lao Huang's family is not short of money. He chose the medical profession and doesn't expect to be promoted. His father went to the health bureau because he really had no place to go.

Therefore, thinking that no one does it outside the brain, and the technology outside the brain is relatively backward, he thinks he is a new generation of college students in the hospital and should be able to make a career.

Moreover, the more backward the Department is, the easier it is to make achievements. His father advised him at that time. He didn't listen and plunged into the Atlantic outside his head.

Time flies, from the black hair in those days to the current local support center.

From his ambition in those days to his anxiety now, it is estimated that how many times Lao Huang slapped himself in the face with regret in the dark.

His classmates who entered the hospital in the same year, the director of orthopedics and the director of general surgery, were no better than him.

They are all strong competitors for the Dean, and he is getting farther and farther away from the dean.

I don't want to say that. What bothers Lao Huang most is outside their minds. Although it sounds like thinking about things for a while, in fact, the Department is directly the transfer station.

Now Lao Huang's only thought is not to let the other two go beyond.

"Zhang Yuan! I admire it. The operation is too old-fashioned." When director Jiang's patient had just finished, Lao Huang didn't allow director Jiang and Zhang Fan to say anything more. He hurried forward to block Zhang Fan.

On the first day, Zhang Fan invited him to dinner. In the next few days, the directors of others came to contact Zhang Fan in private.

There is no big party. It's all one-on-one. Zhang Fan and Xue Xiaoqiao eat all the places in the bird

market.

The directors said the same thing, "Zhang Yuan, we must support our work more in the future. Professor Zhao is a long river now!"

Young people have good face, middle-aged people have better face, but middle-aged people pay more attention to interests.

Lao Huang, there are other directors who don't want face, but Zhang fan can bring them more face in the future, so

But young people are a little angry. When Zhang Fan is in general foreign education, he doesn't say technology, but says his master and his uncle, he can shut up the doctors engaged in general foreign education in China.

But not outside the brain, and young doctors don't really understand how powerful Zhang Fan's technology is.

Just as newborn calves are not afraid of tigers, there are many who refused Ouyang at the job fair that year.

Every year, Ouyang holds a job fair, full of confidence and loss. Although the bird market is not a super city, it is the capital after all, so it is difficult to find graduate students in large departments.

"Look at these old guys. They can talk about the past, but they can also go out of their mind.

Oh, I blush for them. When I graduated last year, I didn't go to the tea vegetable Dean's invitation. At least we are also the provincial central hospital, right.

But look at it now. Hey, shame. Hurry up tomorrow and change the brand of the hospital to the provincial central branch of chasu people's hospital. "

After changing their medicine in the morning, the two new graduate students chatted at the door of the duty room. There were few surgical patients, and they were not busy.

They met face to face. As a result, the one who didn't speak saw that the director Lao Huang came from afar, and the one who spoke was back to back.

The one who didn't speak pretended not to see the same and said, "Hey, the director is also well intentioned. We still need to understand more. Look at our director, he's angry and blisters in the corners of his mouth. It really hurts! "

"That's because he's the oldest extrabrain director of the provincial hospital. As a result, several rising stars are pressed to call their parents! If I... "

Lao Huang heard it and his face turned blue. There are some things I can do, but you can't say.

What's more, this is the naked peeling off of Lao Huang's face. Lao Huang was almost angry at the door.

Misfortune comes out of the mouth. In fact, young graduate students didn't complain so much, mainly because they thought that when tea came to invite me, I didn't go, but now tea came to anyone, and the hospital didn't have the airs of the provincial central hospital.

It's like a little lost, a little sour.

As a result, he didn't open the door. "What can you do?" Lao Huang was behind them with anger.

"Director!" The soul who turned his back to ridicule Lao Huang was scared away.

"I don't have the ability to be your director, and this department can't keep you. Take your things back to the political and religious office later! "

"Director, director, listen to me, I actually..."

Lao Huang slammed the door of the office.

"You!" The graduate student with his back to the director pointed to his classmates and colleagues who had just stood in front of him with red eyes!

"I didn't see it either. Hey, you said it, and so did you. You have to talk about the director! Hurry up and find a way to return it. If you really return it, how can you stay in this hospital in the future! "

With that, he seemed to regret the other party, smashed his mouth and left.

The young man who wanted to cry and didn't know what to do next stood at the door of the duty room.

His outcome is obvious. It's difficult to admit his fate. He can only go to the EEG room.

If you have no money, you don't have a position. Generally, this department is for the elderly. If you want, you will bite your teeth and Kobo will jump out of this place.

Otherwise, let alone the provincial central hospital, it is estimated that he can't enter the clinic in all the top three hospitals in niaoshi.

After three days of intensive surgery, the system outside the brain was finally upgraded.

It's really gratifying. Even if Zhang Fan doesn't smile, he has a smile in his eyebrows.

Xue Xiaoqiao wondered, "Why are you so happy? one 's eyes grow round with delight at the sight of money? No! "

The system has been upgraded. Zhang fan can finally relax a little. If it's a pit, it's an abyss outside the brain. It's too difficult for a chicken to climb.

Originally I wanted to open Urology, but on second thought, I still opened cardiothoracic surgery.

A little happy chest, what little expectation Zhang Fan kept in his heart is gone. The formula has not changed, and the taste remains the same!

Originally, I thought that I had opened three subjects. The system should be mature and can change something from time to time.

As a result

In the past, Zhang Fan always kept an idea of wanting to get close to the system, but he didn't dare to be afraid of it running away.

As surgery opened three subjects, Zhang Fan gradually understood.

This thing is a super library, plus an operating room with a simulation system, and it still has a chain of contempt.

Not only does it despise the chain, it is also proud and charming. Anyway, I'm here. Do you love to come or not? Do you love to work hard? Anyway, my threshold is so high.

Therefore, when Zhang Fan ordered happy thoracic surgery, he was used to it. Looking at the subjects displayed like the thread of rolling curtain beads was cut, he was very calm!

The first is the breast! Then, from the rib fracture to the end of hemopneumothorax, this is the fur of cardiothoracic surgery. There is no lung tissue, let alone the heart.

This is almost a dozen sub subjects.

After reading the chest wall and chest, that is, the periphery of the so-called cardiothoracic surgery, the boss, chest wall tumor in this peripheral disease.

Zhang Fan continued to look at lung diseases, esophageal diseases and mediastinal diseases. It took almost half an hour to turn to the heart.

Really, Zhang Fan doesn't feel strange at all. This thing is definitely not a cool girl in summer. It must be a girl in the coldest time in the frontier.

Wear one layer after another.

When the last layer is off. Cardiac surgery came up with a killer mace. Will you marry me?

Wrong, it should be said like this: go and have a look at the foundation in your heart first.

Other surgeries, even if they are outside the brain, can barely use them if they only do surgery.

But not in the heart. This thing has two systems and two systems. If you don't pay attention, people will stop you. Therefore, cardiac surgery is a discipline based on a solid foundation of Cardiology.

Turning over the cardiothoracic surgery in the system, Zhang fanyue became more and more fighting spirit. What do you say about this thing.

Some people will feel boring, but some people can figure out and practice again and again.

In short, for example, playing red Douluo, when Zhang Fan watched the children in the courtyard play this game, he was very excited. If he could play a game, he would be excited for a week even if he died in three seconds.

In fact, men and boys have little change in their interests, and their hobbies remain unchanged forever. When I was a child, I had to hold a toy car when I went to bed at night. When I grew up and saw a physical car, I still had greedy eyes and itchy hands.

When you grow up, you will have more interests at most. Moreover, this effort, this exercise, this self entertainment like exercise, like drug (a), will be addictive.

"Why don't I do as well as the best in the system?"

"Why can't I improve a little?"

When Zhang Fan was lying in the hotel ready to open his breast to have a look, the managers of a two pharmaceutical companies outside the hotel began to think of ways to meet Zhang Fan.

A few days ago, they were busy and had no choice. Now they are idle, and all the immortals have also dispatched.

Just as everyone was grinding their hands and fists to attack Zhang Fan's mountain, something happened to tea vegetable.

Medical malpractice is a problem, but it can also be said that it is not a problem of medical malpractice.

"Hasn't Zhang Fan come back yet? It's been a few days. Call and ask him to come back. "

Ouyang's mouth was crooked. With the development of the municipal hospital getting better and better, Ouyang almost felt that when the peak of his career was approaching, there was such a thing. Can he not be angry.

The director of the medical department called Zhang Fan in front of Ouyang.

"Zhang Yuan, have you finished your work? Something happened in the hospital. Come back quickly!"

Ouyang listened to the director's phone call. Although he seemed dissatisfied, he kept looking at the expired documents in his hand. In fact, his ears were sticking.

"What's going on!"

The director of the medical department told Zhang Fan the whole story. Zhang Fan immediately said, "tell the Dean, don't worry, I'll buy a plane ticket now and I can get to the hospital in the afternoon.

What's the matter? I'll talk about it when I come. "

"Okay, okay, okay!" The director of the medical department is like a bullied primary school student. His senior cousin is coming for revenge. That's exciting.

"What do you say?" After hanging up, Ouyang asked at the first time.

"Zhang Yuan, buy a plane ticket right away and you can arrive in the afternoon!"

"In the bird market, where can I buy a ticket for someone who is not familiar with his birthplace? Go and book a ticket for him quickly."

After the director of the medical office left, Ouyang walked around the office with a breath in his mouth.

You can't make a fire.

Things are actually simple to say. But, some things, some people, you really can't say.

General surgery, embarrassment up and down. It turned out that the deputy director of a tea vegetable Bureau, who was in his fifties, felt that his lower body was not strong recently.

Although the unit was busy at the end of the year, he was worried that he would not enjoy some benefits after retirement.

So, regardless, he came to the hospital for convalescence. Living in the special needs department, the doctors in the special needs department look, yo, you are a surgical disease, and you have to be seen by the surgeon.

Then a doctor in charge of general surgery came. The doctor who had just been promoted to be the doctor in charge was completely convinced in front of the old Jianghu.

"What bureau do I belong to? Don't mention your nephew's school problem. Even if your neighbor's school problem, I can solve it for you."

Then there was a situation. The brought his working attitude to the hospital.

After the operation, the doctor told you to rest and lie flat.

Where will he listen? In his words, I have energy. You should listen to me. Disease should listen to me!

As a result, postoperative complications occurred. Then, the trouble is indomitable.

Chapter 787

In the past, it was estimated that it was due to lack of food or heavy work. When men and women were over 50, they felt old. It was like a bus driving on the tea vegetable street. They could stop cooking anytime and anywhere.

But now, to tell the truth, even people in their early 60s, especially those who have been in the system for many years, if they can still be a small leader, they will definitely look younger than some young men.

This is the case with the leader Wang, who had an operation in the tea vegetable hospital. In his early fifties, there was no hope of promotion, and his hobby began to change.

Eat, drink and play, tidy up, wear a flower tie, put on hair wax, comb your big back, and then put on a bright down jacket. You are a successful uncle.

If there is another passing car, go to the entertainment place and shout at night. Today I pay the bill, darling, Yingying. My life is quite happy.

Although Lao Wang doesn't exaggerate to the point that I pay the bill tonight, he can't be underestimated. In the unit, many things have stood aside.

But there is still a certain amount of energy. For example, after annual retirement or resignation, some people are transferred from prefectures and counties to the urban area.

The current function of leader Wang is mainly responsible for this item. It seems that he really has no right.

In fact, the right is not small. Moreover, this thing is like a meat bun. Whether there is meat is not on the skin.

There is nothing wrong with how many young people live apart because of their work, and how many young people dream of going from prefectures and counties to urban areas.

Wang leads this piece. Well, life is very natural and unrestrained.

The results do not know how, got epididymitis, this disease, how to say, many people are very strange.

However, after all, I didn't open the urinary system. Just say it roughly, let's have a concept.

What is epididymis? It can be said that it is a small organ near testis (a) pill, which is connected to vas deferens and testis (a) pill at the same time.

Human sperm (a) is actually the same as bananas sold from the south to the north. When they come out of testosterone (a), they are not fully mature.

The epididymis is actually the ripening work.

On weekdays, this place is relatively deep. Generally, it will not be infected, especially among young adults. There are few infections, high utilization rate and fast metabolism.

But this thing, once the lower body is not cleaned up, something may happen.

For example, if the foreskin is too long and the bacteria are retrograde, it will infect this place, or there is another kind of

Especially E. coli, it's too easy to infect this place. Just like chickens eat insects, one to one, they can't run away.

Leader Wang is 50 years old. I haven't heard that the skin is too long.

As a result, one day, he felt inappropriate. Swollen and uncomfortable, it's like flying out to see the world all the time. I can't wear my underwear.

And the pain, this pain, is not hard to remember, nor is it. It immediately makes you worse than life and death,

It's a kind of, hey, just like someone pulling his intestines and rising pain for a while, just like being pulled alive by life to pull his intestines out of chrysanthemum.

Lao Wang came to the hospital. While boasting about his position, he was uneasy. He was deeply afraid of something.

When the doctors in the special needs department, that is, the former cadre ward, look, yo, they have to ask the surgeon to take a look.

The surgeon came to check, not only epididymitis, but also hernia. Both diseases can make the lower body edema.

As a result, the swelling was particularly severe. The skin is bright and bright, just like the current LED bedside lamp.

Anti inflammation plus surgery!

The hernia operation was successful. The doctors pulled the intestines back to the abdominal cavity from below, and the infection was well controlled.

It can also be said that the medicine can cure the disease.

After the operation, the doctor told him to stay in bed to avoid unclean behavior.

Medical treatment, especially the words of doctors, sometimes sounds frightening.

"You're not good. You might become cancerous!" In fact, the doctor doesn't know how much the chance of cancer is. The most important thing is to express: maybe

It sounds like the patient is going to die tomorrow.

And some words, for example, you must stay in bed. Many patients don't think so. If I can't sleep, I need you to teach me?

To be honest, doctors are not sure about the probability of cancer, because there are too many causes of cancer.

However, as long as the doctor says, he must be sure of letting you stay in bed.

There is also unclean behavior, which is not as simple as children playing with mud.

Once someone implicitly reminds you not to have unclean behavior, this does not mean that you need to wash your hands before and after meals, but clearly tells you: don't mess around!

Lao Wang was lying in the ward. The first day and the next day, a week later, he felt much better, but he didn't want to go to work, but it was boring not to go to work, and the doctor told him to have more rest.

Therefore, lying in the big bed of the special needs department was boring day by day. As a result, one day, the guy took off his sick suit and sneaked out of the hospital.

Although he suffered from general surgery, urology and other diseases, he was hospitalized in the special needs department, so the doctors in various departments had weak jurisdiction over him.

Lao Wang, who ran out, felt that he was well, that he had nothing to do, that he was young, and that he could drink small wine every day and look for small things every day.

After drinking some wine and flattered by the people who asked him to do things, Lao Wang farted everything the doctor said.

After a happy night, he returned to the hospital exhausted the next day. During the ward round in the morning, the doctor looked and said, "President Wang" was still sleeping.

And it's been so long that I don't embarrass the leaders anymore. Otherwise, I'm a little embarrassed to take off my pants in front of the big guys every day.

In this way, things come out. If Lao Wang goes out of the hospital, it has nothing to do with the hospital.

But that's the problem, the special needs department. In the past, the benefits were very good. You couldn't live in without some extraordinary energy.

But now, serious leading cadres dare not live, ordinary people can't afford to live, and they have directly become furnishings. Where do so many sick tycoons come from all over the world.

But doctors and nurses also have to live. Finally, a patient came, and everyone opened and closed their eyes to let him soak in a patient.

This bubble is in trouble!

It was originally epididymitis and hernia, which directly caused his spermatic cord urinary tract. It can be said that he had been seriously damaged, even if it was repaired.

In fact, just like the dam that has collapsed once, it is not as strong as it was at the beginning, and can only be made up by years.

But this guy, after drinking alcohol, alcohol has a paralytic effect. Even if his body gives a pain warning, he can't feel it.

Besides, it was noisy all night. Back to the hospital, tired and tired, went to sleep directly.

When you look at your body like this, you don't care about yourself. I don't care who you love!

That's it. Lao Wang sleeps and sleeps. He keeps his mouth open and thinks about the good things of last night in his dream.

As a result, the original spring dream turned into a nightmare. In the dream, when he was about to do something, he suddenly broke into a big man.

His head is bigger than a pumpkin and his hands are wider than a PU fan. He grabbed his neck and lifted him upside down. His hands forcibly separated his legs, opened his mouth and shouted, I let you bully my wife.

Then he bit between Lao Wang's legs. Lao Wang was so frightened that he jumped up directly from the big bed, and his panic was about to jump out of his throat.

Suddenly, I felt a special pain below, as if I had been bitten in my dream.

When he opened his pants and looked down, Lao Wang's eyes were really broken this time. Dandan was hanging there like a huge purple meatball.

It's not as big as a bowl, but it's not much smaller. Just go into a purple honeycomb or hang a huge purple potato.

Moreover, the more you look at it, the more painful it hurts. His legs can't lift up. Ouch, ouch, Lao Wang can't even press the pager. Every move hurts!

It hurts. The huge purple meatballs can't be touched. Touching the skin is like the tendons of the whole body have been pulled out, like the intestines have been pulled out from the anus, from the bottom to the top.

Sweat, cold sweat on the forehead, pain, brushing flow, ouch, ouch, groans, Lao Wang couldn't shout out, and his tongue didn't dare to tremble with some force.

When the nurse who wanted to give the patient an infusion passed by, she heard it and opened the door.

Lao Wang died and lay on the big white bed, just like lying with a split fork. He couldn't separate his legs.

And his point is particularly obvious, purple dazzling, purple shining.

The panic on his face was as white as a ghost.

When Lao Wang saw the nurse, tears came out, "help, help me!" He didn't even dare to shout loudly because it hurt!

The voice is like a dog protecting food. It can't be lower.

As soon as the nurse saw it, she turned around and ran away. She wasn't frightened. To be honest, she hasn't seen anything, but she hasn't seen anything like this!

"Doctor, come on, the patient in bed 8 has a problem, doctor, come on!"

When the doctor in the office heard the nurse shouting so quickly, he thought the other party had heart failure.

He pushed the ambulance to the ward. As a result, he was stupid when he came in.

Really, surgical diseases are often not slow. Sometimes, half an hour ago and half an hour later, they are two diseases directly.

The doctor in the special needs department is a physician, but he knows at a glance that his intestines are incarcerated.

Call!

Burton, to tell you the truth, is one of the most reluctant words for medical people.

Because often embedded, followed by necrosis!

When human organs are ischemic, they can be delayed until the disease is relieved through the support of surrounding organs.

Incarcerated ischemia is not like that. The body can't support this thing through other organs. The ischemia time is a little, that is, necrosis. Don't even think about it.

Just like pinching the respiratory tract, the gas can't be sucked in.

The surgeon took Lao Wang and ran to the operating room, calling his family members and leaders.

As soon as the director of general surgery saw it, he quickly called the director of urology.

Urology, tea surgery, the Department that most listens to Ouyang's words. Because of the director, when urology Lao Li came to have a look, "remove the, testis (a) pill necrosis!"

The director of general surgery felt numb. The general foreign doctor in charge of the bed is almost crying.

"Have you made rounds this morning?" Lao Chen, a general foreigner, quickly put his fingers on the forehead of the bed doctor.

"Yes, he goes to bed in the morning..."

"This is not the hotel. You are a doctor, not a waiter. What are you doing? What are you doing.

What now, you tell me, what now? Necrosis, how to do? "

The family is here, Ouyang is here.

Lao Wang's wife, fat, with a face full of flesh and double eyelids made with two knives, is like someone pulling her eyelids all the time behind her.

Eyes are always half open and half closed. When you look at people, your chin is raised, as if you were looking at people with your lower eyelids.

Thin mouth skin. When you open your mouth, you can see the gold teeth inlaid inside.

On the fat arm, there was a donkey bag, yellow teeth and red lips, and very white foundation.

How many people have you met when you are an old doctor. As soon as he saw it, he knew he had no choice but to turn the matter over to the hospital.

The doctor in charge of the bed, at this time, really, I don't want to cry.

Originally, I thought I could make personal contacts after the operation, but the contacts didn't come, and the man-made disaster came.

He looked at each other's wife again and felt bitter. He really wanted to slap himself.

"What? Necrosis? Do you want to cut? " Lao Wang's wife jumped up directly, and the meat all over her body seemed to shake together, just like sumo wrestlers in Marubeni.

"Is that what you see? Ah, be a good man. Send it in. After watching it for a few days, you should cut it off

Ah, come on, I'll cut off yours. Would you like it? If you open your mouth, you have to cut it. Why don't you cut your own!

Ah, what doctor, shit! "

Even pointing and scolding, there was no place for the ashamed face of the director of general foreign studies.

Ouyang stood aside and couldn't open his mouth.

How do I say this? What can you say?

Can it be said that: he is so old and has no reproductive requirements, so he can cut it?

I can't tell. Ouyang is suffering. The triangular eyes stared, and the sharp eyes almost killed the doctors and directors of general surgery several times.

Lao Wang's wife, it is estimated that Lao Wang's failure and the depression of her own life broke out next time.

In the general foreign affairs director's office, she yelled. Ouyang turned out of the door and immediately contacted Zhang Fan. She didn't say a word to the general foreign affairs director.

The director of general foreign affairs really got a dog in his heart.

"First suspend the bedside doctor for reflection!" Ouyang heard that Zhang Fan had got on the plane and hung up the bed doctor first.

Lao Wang's wife is still making trouble. Anyway, it's just a meaning. You have to find a way for me.

The director of general foreign studies, with the spittle of the other party on his face, did not dare to wipe it. Like a child's daughter-in-law, he advised and explained.

On the plane, Zhang Fan kept looking at the subject of heart foundation with the internal medicine book brought from the provincial central hospital.

Open cardiothoracic surgery. Although there are many sub projects, the first one is cardiothoracic foundation.

There are a variety of medical records, which can't be done. None of the other sub projects can be opened. This is also different from other subjects.

Over the past two years, Zhang Fan has made great efforts to improve his liver. As a result, he opened

other people's basic subjects. Obediently, the medical records inside are specious.

"Still not hard enough!" Zhang Fan sighed in his heart, and then he didn't sleep. In the past, he went to bed when he got on the plane. Now he can't sleep.

There is pressure in my heart. I can always find the right way to practice my hands and liver in surgery.

But this foundation can't work. One is one. It has nothing to do with two. Knowing is knowing. Not knowing is not knowing. It can't try. It can only be accumulated bit by bit.

Learn from good people and wizards. As soon as Zhang Fan gets on the plane, he opens his book and reads. He's not pretending to be forced. He's quite serious.

Xue Xiaoqiao's mood of chatting and farting disappeared.

"Niang, he's so talented and hard-working. He's not the dean. Who will be the dean?"

Then, I also took a book, began to read, and then slowly looked into my heart.

The passengers on the plane watched the two young people refuel and read hard. Some parents said to their children: you should study hard in the future, or you should study with books even when you go out. Look at the two brothers, it is estimated that you will fail the exam again.

Chapter 788

Cut!

Crosscutting!

Side cut!

Every time I see these words in the textbook, Zhang Fan will think of the theme song of beautiful girl ghost starring Xiao Zhang!

For ordinary organs, such as the appendix, or for routine surgery, such as caesarean section, these names represent the difference in future prognosis.

For example, caesarean section was actually cut vertically in the early years, but later, almost all of them were cut horizontally. It also keeps pace with the times.

Vertical cutting seems fierce. In fact, its damage is much smaller than cross cutting. However, after all, there is also a beauty. Therefore, most people often choose more beautiful cross cutting.

It can be imagined that a little beauty can make people have to choose, and how terrible it would be if the most important trait of a man was removed.

Leader Wang has been silly. He is lying on his back in the ward of the special needs department, with a face of lovelessness.

Now, where does he still have the spirit to come to the hospital at that time, and where does he still boast and show off.

Now he has a scene in his mind: he doesn't need a face, his teeth are gone, his muscles are atrophied, and his breast begins to grow. Then a group of children surround him and shout loudly: grandma, grandma, I want to eat sugar.

When he thinks about it, he wants to cry. When he thinks about it, he wants to cry.

Lao Wang's wife, sitting on the nurse platform of general surgery at this time, patted her thighs and cried and scolded.

When she was young, she worked as a women's Federation in the county. At that time, the women's Federation had a very important job, that is, helping catch pregnant women.

Her personality is very hot, although her husband has had sex with her occasionally.

But now it's completely hopeless. Coupled with her hot personality, can this thing be tolerated? No.

In the past, when she was in the county, she could be called two trumpet flowers in the county.

Now that she has come to the city and claims to be a man, how can she suffer this loss.

Sitting on the nurse platform, she pointed to the introduction column of general foreign doctors and scolded.

"Chen Quanping, what a fart! You are a charlatan, not even a charlatan. Why don't you cut off your egg (a)...."

She didn't scold anyone, so she pointed to the picture of the director of general foreign studies, and the more she scolded, the louder her voice became.

Moreover, she is a person in the system. She knows things in the system very clearly and thoroughly.

For example, if a person is not familiar with the internal system today, even if it is all the fault of the hospital.

Most people have two choices, one is to go through legal procedures, and the other is to call friends to block the door.

But she doesn't, she doesn't.

Then the union, the Health Bureau, called one after another. The tone is not as polite as before.

That is to say, Ouyang Hu's death threat is not defeated. If someone else were to change, it would be chaotic at this time.

Public to public, sometimes, it depends not only on things, but also on people. In the past two years, the city hospital has been too popular, and buildings have sprung up.

Equipment keeps entering the hospital one by one, and the annual income is measured in billions, but Ouyang is too strong, so strong that the wind can't blow and the rain can't enter.

Now, Lao Wang's wife is like a lighter, which has ignited many people's ideas.

At this time, Ouyang calmed down, did not criticize Zhao Quanping, nor turned his face and slapped the table in anger.

"Director Zhao, improve the patient's medical records as soon as possible and have a look at them in person.

It's ours, we admit, not ours. We have no obligation to undertake it. "

"OK. Dean, I'll go now. " Lao Zhao was almost crying. At this time, he really wanted the old lady to clean him up. The more so, the more uncomfortable he was.

"Director Li, now hurry to make an operation plan and prepare for the worst. You must not fight unprepared war. Please! "

Lao Li, the director of urology department, has been hairy for many years. Ouyang hasn't spoken to him

with this attitude for many years.

When they talked about friends before, Ouyang didn't say it to him in this tone.

Now, at such an age, Ouyang asked him in this tone, and Lao Li's goose bumps stood up all over his body.

"Don't worry, I'll go now. I'll do my best. Don't be too uncomfortable. Isn't Zhang Yuan coming soon! He... "

Ouyang waved his hand. "He was sent by the public for consultation. This time it has nothing to do with him."

"Good!" With that, Lao Li left in one breath. Out of the door of the office, he began to call: "call all the top business people in the Department to the operating room."

"Secretary Ren, now go and help pacify the patients and doctors in general surgery.

Anyway, we are a hospital and we have to treat others.

We can't make everyone nervous because of a patient, let alone cause accidents to others because of one person. "

"OK, Dean, I'll go right away."

Ren Li nodded and left the hospital.

Lao Gao wanted to stop talking. He was really a good man. If he met someone a little bit, he would have jumped up by this time.

But Lao Gao didn't.

"President Gao, it's not convenient for me to go to the government now. I want to know that you go there in person. Other people don't have enough level and can't speak."

"OK, what's the main purpose of my visit?" Lao Gao nodded.

"Go and ask the leader in charge of health. The municipal hospital is still a unit that does not belong to the government. Is there anyone in charge of her organ unit.

Because of her crazy behavior, others' lives are in danger. Is the superior also not responsible? "

"Well!" Lao Gao looked at Ouyang, finally nodded helplessly, got up and went out.

Sometimes, when hospitals encounter such things, the situation is also funny. Hospital doctors or leaders at the department level advocate taking judicial channels and third-party appraisal.

This is not the case at the level of hospital leaders. There's a bit of peace in it.

On weekdays, perhaps indecisive leaders, all become vigorous and resolute at this time, and cut the mess with a quick knife.

Lose money, not in 100000, not in 100000, not in 300000. Anyway, it's not your own money. Just don't make things happen.

Where the money comes from, the hospital bears 40% and the Department bears 60%.

Then the doctor concerned will bear 50% of this part from the Department.

Therefore, you may feel that why the previous doctors were so good, what disease it was, and directly tell the patients and their families what disease it was and how to treat it without the patients and their families choosing.

Now doctors have higher and higher education, but they talk more and more confused. Isn't it funny that family members and patients should choose their own treatment plan?

It's not clear what's right and wrong here, but Ouyang didn't choose to calm down or be slaughtered.

We talk about the matter, ask the law to speak, and ask the third-party expert to speak.

The man was almost gone. The director of the medical office gently added some water to Ouyang's water cup, "Dean, why don't you wait for Zhang hospital."

He was worried that Ouyang was motivated.

"Hey, I'll wait for him now. Otherwise, I'll go to the government myself."

Ouyang pinched the corner of his eye and sighed gently. In any case, the patient left the hospital without permission, and the doctor neglected to make a ward round in the morning. This is the fault of the hospital and can't be justified.

While the parties were arguing, Zhang Fan got off the plane and took a little more than half an hour from bird affairs to tea.

120 has been waiting at the airport. At 120, the driver accelerated the super hospital run.

"What the hell is going on." Zhang Fan asked the clerk who had always picked him up.

The little officer hesitated and couldn't explain clearly, and Zhang Fan didn't ask any more.

As soon as he entered the hospital, Zhang Fan felt that it was wrong. People in and out seemed to be talking: darling, which woman is too powerful, and the director of general foreign studies turned green.

"Can you stop scolding? If you want to cut people's men... Women are worried!"

As soon as Zhang Fan went to the gate of the government building, Ouyang and they had already come down.

"Zhang Yuan..." after seeing Ouyang, the director of the medical department directly began to describe the beginning and end of the matter.

"Let's go and have a look first. If you can't save it, you'll have a rest first. It's estimated that you're tired these days."

After the director of the medical office finished, Ouyang said to Zhang Fan without expression.

Zhang Fan smiled and didn't talk much. He understood, but can he go? No, it's a group. It's a comrade in arms in the same trench.

If he leaves today, he can't pass the barrier in his heart.

Chapter 789

"The municipal hospital made Lao Wang's" light "of XX Bureau as big as a purple volleyball. Hey, it's said that it can't be kept, and it has to be cut off!"

"No, it's true or false. Alas, Lao Wang's family is unlucky. It's estimated that there's no hope this time. What the hell is going on? "

"Hey, what else can I do? Lao Wang is not a good thing. Don't you see his wine and color? Many young people want to fall from the countryside to the city."

"Lao Wang and his wife are going crazy!"

"What's crazy? Lao Wang is about to arrive at the station. The couple in his family are already more aggressive. This time, they are determined to make some trouble."

Good things don't go out, bad things spread thousands of miles, and Lao Wang's daughter-in-law made a terrible noise, which has almost become a well-known joke in the city.

Especially in some elderly care marginal departments, a group of old women were bored and gossip. At this time, they were excited as if they had seen it with their own eyes. They described it as if they had seen it in person, which was clearer than Zhang Fan.

He despised Lao Wang one by one, but what he thought was: we must give him a warning when we go home. Don't fool around. Another fool will become a volleyball.

The world of adults is so strange. There is no market for good people and good deeds. There is absolutely no peach lace news for people to pay attention to.

Especially the peach news of people familiar with you, which is directly like Mars hitting the earth. The first sentence is: do you know about Lao Wang?

"What? hear nothing of? I'll tell you! "

Lao Wang now really, give some courage and strength. He can think about wiping his neck and looking for short-sightedness.

Lying on the hospital bed, the pain is like waves, turning from bottom to top one after another. It hurts like cramps. When you burn, you feel a red iron pimple between your legs. You can't touch it. When you touch it, it's a burning pain.

The physical devastation can also bite his teeth and close his eyes for a while, but the spiritual devastation really makes Lao Wang cry without tears.

The little nurse in and out looked at him. Although she tried to pretend to be a natural face, she could dodge her eyes and hide her expression of wanting to laugh and not daring to laugh on her face, which made Lao Wang, who was more or less a leader, call it sour in his heart.

Most importantly, his wife, like a Tibetan mastiff who broke an iron chain, was crazy outside the ward, crying and scolding.

Shout from time to time: why not cut you, why not cut you!

"Retribution, retribution!" Lao Wang was lying on the hospital bed, holding a white pillow towel over his face, with tears brushed away.

How many times did he shout and ask his wife not to make trouble and come back quietly. As a result, the other party seemed unable to hear him and ignored him.

His state of mind at this time is really like lying naked on the ice in three or nine days.

Ouyang took Zhang Fan to the ward round. Originally, Zhang Fan didn't want Ouyang to come, because when he stood at the bottom of the first floor, he could hear the shouting and swearing on the fifth floor. We can imagine how loud and loud the woman's voice was.

The people who came and went to see the doctor and accompanied the family members who came to see the doctor. When they saw a group of leaders wearing white coats, they whispered one after another.

There are also deliberately blocked, "what hospital? Even people's ancestral roots can be damaged, and no one comes out to take care of them."

In the past, the director of the medical office would definitely come forward to theory, but today, looking at Ouyang's face, everyone pretended not to hear the same.

In fact, people are so easy to listen and believe.

When he went upstairs, Lao Wang's wife saw that the hospital leaders came, she became more and more uncontrollable. She lay directly on the nurse's platform, "I can't live, I can't live! The city hospital is killing people! "

The chubby body was lying on the white table, sprawled, and those who wanted to help her couldn't get close to her. Her hands and feet danced dazzlingly, just like a turned over female turtle couldn't get up.

Zhang Fan looked at the woman lying on the nurse's platform, frowned, and could only sigh helplessly in his heart.

At this time, the medical environment is the most difficult time. Many laws, regulations and systems are actually crossing the river.

Some people suffer losses at this time, such as those who fail to pay medical insurance, but they want to pay when they are sick, but they don't want to. They smash the pot and sell iron to cure their diseases, and then their families are in vain.

There are also people who make money at this time. For example, one day, hospitals, exaggerated places, several hospitals jointly try their best to overdraw the medical insurance of a county. It's really

powerful.

Many hospitals, especially those below the county level, seem to have completely lost their patients overnight. It's time to describe them with a few people.

With the change of hospital and medical insurance, the contradiction becomes more and more acute. It is unrealistic to rely solely on hospitals and doctors to solve the problem.

"Look at the patient first!" Zhang Fan said a word to Ouyang gently. Ouyang nodded and looked at the head nurse. The nurses in the special needs department were all hairy.

"Go back to the ward quickly. There's nothing to see. Hurry up. Everyone goes back to the ward to have a rest. You can have a good rest quickly."

The special needs department is different from the ordinary ward. The head nurse really dare not criticize. It is estimated that it is also the most unlicensed head nurse in the whole hospital.

After entering the ward, Zhang Fan and others saw Lao Wang. Really, they didn't talk about anything else. Now they really sympathize with Lao Wang.

Lao Wang looked like he was dead and not buried. His face was covered with a white pillow towel. His whole body twitched slowly. He moaned in bursts. He didn't know whether to cry or moan in pain.

"Come on, I'll check it for you." Zhang Fan came forward and said a word, and then gently took off the pillow towel on Lao Wang's face.

Lao Wang looked at Ouyang, Zhang Fan and other leaders of the hospital. He was ashamed, especially Ouyang. He often met him in meetings before and occasionally said a few words.

Ouyang saw that Zhang Fan wanted to check, so he stood by the windowsill and looked outside.

When he lifted the thin quilt on his leg, Lao Wang couldn't help pumping. His hands hung in the air like a hen protecting her eggs.

As soon as the quilt was opened, Zhang Fan almost laughed. Really, although it was a little too much to laugh at this time, the scene in front of us was too ridiculous.

Lao Wang's legs are half coiled on the hospital bed, just like an O-shape. He doesn't let his hips get into bed and his legs close. Really, it's like practicing yoga.

In the middle of his legs, it looks like a bunch of big grapes and not like big grapes. It should be like a big purple papaya in the crescent moon.

"Light" is a bag containing two yellow twins.

In the early days, it was actually four brothers, because there were two kidneys hanging on the back waist. They could be said to be brothers of the same origin.

When there are many brothers, they have to separate their families. One of the two kidneys is on one side, while the other two brothers go far away and come to the outside of the abdominal cavity.

Although they are brothers, there are still differences, such as fatter, taller and whiter.

Therefore, there are differences between the two yellows. For example, if one has a better appetite and eats more, he will be fatter.

In fact, organs are also a truth. The yellow on Lao Wang's right is a little larger than that on the left in normal times.

This is accumulated over time, such as eyes. Some people have amblyopia in one eye, but the degree of myopia is not high. The other eye is not amblyopia, but the degree of myopia is high.

Equipped with glasses, in order to take care of the high degree, and then look at the high degree side more clearly.

For a long time, the use rate of eyes with high degree is high, while the use rate of amblyopia becomes low. For a long time, one side will be large and the other side will be small.

Therefore, people in this situation can take off their eyes if they have nothing to do, often far away, so that the eyes of amblyopia can also function.

Otherwise, when you get old, you won't know when one eye will go blind.

Also, for example, if some people stand a little longer, they automatically stand upright with one leg and rest with the other leg.

In fact, this is because one leg is long and one leg is short. Of course, the gap must be within two centimeters. If it exceeds two centimeters, it will limp.

Therefore, people in this situation should put a slightly thicker insole in their shoes, otherwise they will wear their hip joints for a long time.

In fact, Huang is also a truth. He is a little fat, so his blood vessels and channels will be wider.

Although not much, just a little will make the organs different.

The yellow on Lao Wang's right side is a little larger. When expelling sperm, there is more secretion on the right side. When blood is needed, there is also more secretion on the right side.

It seems to be a good thing. In fact, it's not. When Lao Wang's brother got into trouble, bacteria entered and more entered the right side.

Then the result is that the swelling near the right yellow is particularly obvious.

Originally, the bag should be wrinkled like a little old man. At this time, it is like being pulled by beauty. It is light and flat, like an inflated balloon. Even the hair follicles on the bag seem to protrude, open their teeth and claws, like barbs and proper red hair pills.

There is also a slight exudation of liquid, like sweat is not sweat, and a light layer of greasy liquid film is hung on the bag.

It's just like the flower bag in autumn morning, ready to move.

"Gloves, flashlight!" Zhang Fan gently touched Lao Wang's bag with the back of his hand.

First, feel the temperature, and second, feel its hardness. Human organs can be described as soft, slightly soft, tough, slightly tough and hard.

Lao Wang's bags are hot and hard at this time, and the edema is too severe.

After receiving gloves, Zhang Fan puts on gloves, receives a flashlight, and then needs to check.

"Hiss!" Before he started, Lao Wang began to be afraid.

"Don't worry, it's okay, it's okay." Zhang Fan bit his lips to speak, otherwise he was afraid of laughing.

Lao Li and Lao Chen are all around.

Zhang Fan wanted to check. They grabbed Lao Wang's hands and legs.

Lao Wang was frightened. Really, his eyes were like a mouse seeing a cat. His pupils were almost enlarged.

"Relax, relax!" Zhang Fan slowly grabbed his bag, "Hmm!" With a long moan, it was like that the condemned prisoner was finally stabbed, and Lao Wang's teeth were broken.

The inspection of bags is usually color Doppler ultrasound. Now doctors don't think it's troublesome. They usually issue checklists for patients rather than start them in person.

In fact, for the inspection of bags, we should first do the light transmission inspection. How to check it.

If you like playing with stones and jade, take a flashlight and stick it on stones or jade to see its

permeability and light dispersion.

In fact, the inspection bag is the same. Like checking a violet jade, Zhang Fan holds a flashlight and applies it to the bag.

"The one on the right has begun to dissolve! It can only be removed." Zhang Fan said softly.

Lao Wang roared out like a wolf.

With the howling outside his wife's door, it's really like a duet.

"There's still help on the left! But we must do the release operation immediately. We must do it immediately, quickly, or it will be too late."

"Zhang Yuan..." Lao Li, director of urology department, shouted.

Zhang Fan looked up at Lao Li. "Although there are signs of melting, there is still hope. You can have a try."

Then he said to Lao Wang lying in the hospital bed, "one has dissolved and there is no hope, but the other, there is hope, and now we must operate. Get your family to sign.

Whether it can be saved depends on whether the operation is going fast or not. It can't be delayed. If your wife makes trouble again, you're ready to cut it all!"

When Zhang Fan said this, Lao Wang was just like seeing the Savior. He didn't care about the pain. He patted on the bed and shouted loudly, "you immortal, come in and sign. If you make trouble again, I'll divorce you."

The noisy finally signed.

Surgery, "light" resection is actually very simple.

I don't know if anyone has seen it. Fan sheep and parallel pigs, take a blade, cut it open, and then squeeze it with your hand. The white "light" comes out, and then pour in some pepper water, which is over.

The sheep and pigs were crying in pain at this time. They didn't dare to shout loudly. They just shouted in circles.

In fact, people's are almost the same. On the operating table, the blade cuts across and swells to a bag like an egg wing. They directly support the incision a lot.

Yellow water, brown pus, accompanied by the smell of ambition hormone, filled the operating room,

directly like entering a barbecue shop specializing in roasted kidney.

The suction device kept washing, just like cappuccino coffee. The yellowish brown liquid with white cream kept sucking into the drainage bottle.

The "light" on the right has been eaten by E. coli. In fact, the size of this thing is slightly larger than that of checkers. Now, it has directly become the pearl particles in pearl milk tea.

There was no way to keep it. Zhang Fan squeezed it gently and it was squeezed out, "tissue bag!

Remember, when you take it to the medical examination, you must let her wife look at it and sign it! "

Zhang Fan explained to the itinerant nurse.

"Yes!"

It's really meritorious people who go first! The "light" on the other side seems to be afraid. He desperately wants to go back to the abdominal cavity and stick it tightly to the upper end of the bag.

"Come on, wash with yellow salt water!" After treating the necrotic right side, Zhang Fan began to treat the left side.

One drawback of human tissues, especially the terminal organs, is that the reflux is not smooth. In fact, the blood and lymph are not very smooth at the end.

Therefore, systemic medication is not very effective for terminal tissue.

In this situation, whether he can keep his only child depends on whether the cleaning is complete or not.

Yellow saline, in fact, is iodophor plus normal saline. All use iodophor. This thing is irritating to the single seedling. It is already dying. If you stimulate it again, you may die to Zhang Fan on the spot.

Salt water alone is of no use to E. coli.

The yellow salt water poured into Lao Wang's bag. The instrument nurse pulled her eyes and looked curiously.

I guess I haven't seen it, so I lie down beside Zhang Fan and look at him with big eyes.

"Wipe your equipment quickly. It's just a pimple. What's good to see?" Lao Chen was angry, so he said to the little nurse.

The little nurse skimmed her mouth, as if to say: No, look what's wrong!

Chapter 790

When the three major problems of anesthesia, antibiotics and hemostasis were solved, western medicine completely got rid of other medicine in the world and can be described by leaps and bounds.

In the era of no antibiotics, hospitals and doctors were both street barbers. At that time, there were many countries in Europe, and the brains of dogs came out every day.

Therefore, it is very convenient to have a haircut and sew your hair. However, the cure rate is terrible. If a hundred people can live 90, they can already be regarded as famous doctors in the barber industry.

Especially in surgery, doctors are actually afraid that bacteria can't be controlled, and the bacteria in the body are also bullying the soft and afraid of the hard. When a person is particularly strong and healthy, to tell the truth, even superbacteria may have a war.

However, once exposed to the air, there is a large area of bacteria, so it is too difficult to control.

Especially some secretory organs, such as kidney and liver. Once these organs are infected, even in modern times, they are a headache for doctors.

Over and over again, delay does not heal, today is good, tomorrow is wrong, today's E. coli, tomorrow's glucose cocci, special trouble.

Therefore, once an infection operation is hung during the operation, the operation room can not be followed by the next operation. It can only continue after thorough sterilization.

Conventional bacterial infections, to be honest, are really brothers.

Bacteria and viruses, once they change their clothes, may make all today's drugs useless to them.

Especially sexually transmitted diseases, when Chinese people talk about this matter, they always seem to be very implicit. In fact, this implicit is really a good habit.

In those years, a group of exiled people went to America on a ship. They probably didn't kill more people

than the bacteria and viruses they brought.

Especially for (a) genital (a) ulcer and chancre. Really, it is estimated that the average person can live for half a year to see patients with advanced stage of this disease.

Syphilis and gonorrhea are pubic lice diseases that can make you scratch the groin area into flowers. To tell you the truth, these diseases were like hundreds of years ago and are still like now. You can't do anything about others.

When Zhang Fan opened Lao Wang's organs, he smelled and smelled. This odor is different from that of other organs.

Even if the intestines are necrotic and stinky, it is always within the range that people can tolerate. It's just the smell of ordinary stool. It's like going to the earth toilet in summer.

The smell of this place after decay can really disgust you with the food digested overnight.

This place is the second characteristic of human men. It can not only secrete dedication, but also secrete some smells with male characteristics.

It's OK to call it hormone and call it coquettish. This smell is mixed with infection and corruption, wrapped in a narrow environment and under high temperature.

It's like putting a week's rancid leftovers in summer and heating them in the pot.

The surface is covered with colorful humus. It moves a little, and then the humus breaks. There are bubbles in it. The bubbles are still colored.

If Zhang Fan gives others a big push, he can say: wrist cross anal (anal cancer resection), dig through the feces (intestinal obstruction surgery), and have chew teeth scraped across the meat (diabetic gangrene feet), what kind of smelly smell fucking great?

But today, the smell came to my face when I opened the organs. Several doctors first began to cry.

My eyes couldn't stand it, let alone anything else. The little nurse who didn't blink was almost fainted. Er, er, er, her mouth burst her mask.

The esophagus of Zhang Fan and Chen Quanping was twisted.

It's like the feeling that a patient with beriberi has to squeeze his hands into your mouth after rubbing his feet without taking paper to the bathroom. It's too suffocating.

The stink is mixed with the coming Sao. Wong Tai Sin's fart doesn't smell so bad. It's like a drunk who

hasn't brushed his teeth for many years. After spitting out, he opens his mouth, stinks, vomits the fermented smell, and then sticks out his tongue to ask for a kiss. Be good!

Zhang Fan pulled his neck, really pulling his neck and leaning his head. At this time, he wanted to have a neck like a giraffe.

However, the work at hand can not stop. After the yellowish brown iodophor is diluted, it is golden and poured on the organs.

Then Zhang Fan and they began to scrub, again and again, just like rubbing pig large intestine.

The gray and brown spoils were cleaned. I don't know how many times they were washed, and the odor slowly disappeared.

At this time, the golden yellow of the organs contaminated with yellow salt water, like fried balls, is slightly mixed with the coquettish smell of roasted kidney in the stimulating taste of iodophor.

After an operation, the doctors and nurses in an operating room had tears on their faces. I didn't know that they thought they were weeping in silence for another organ lost by Lao Wang.

Although doctors and nurses wear white coats and sit in the bright office, they seem to be very white-collar and elegant.

In fact, it's all illusions. The respiratory department smells sputum and checks sputum, the digestive department looks at secretions, the defecation and urology department looks at urine, the gynecology and obstetrics department looks at teratogens, and the breast department looks at tumors.

Really, none of them is easy to do. Look at their hands, which are washed and degreased. You know how afraid they have to be of what their hands have touched.

It's really anti human.

After cleaning and sewing the golden organs, Zhang Fan said to Chen Quanping, "we must be optimistic this time. If we mess around again, there will be no next time."

"Well, OK, Zhang Yuan."

Anesthesia is lumbar anesthesia, and Lao Wang is sober. Although Zhang Fan told Lao Chen, he is actually warning Lao Wang.

At the end of the operation, those who were shaken up by Lao Wang's wife also felt boring.

They thought it was boring, but Ouyang quit and had to go to court with his medical records. Of course, it would not be settled under the coordination of relevant people.

As the new year is approaching, there is also a peaceful atmosphere in the streets.

Uyghur aunts sell prepared nangs, Kazakh boys shout fresh beef and mutton, and Han shopping malls hang red lanterns. Of course, there are also cut cakes all over the street.

Shao Hua and his two pairs of four old people were busy buying new year goods and bought all new clothes for the old man.

In the first year of marriage, Shao Hua, a new wife, took good care of everything.

"Go and wash quickly. What a strange smell! We went to eat roast kidney with Xue Fei after work?"

"No!" Zhang Fan smiled helplessly and didn't say much. Shaohua didn't care much. She was still busy making food for the new year.

In fact, according to Zhang Fan and Shao Hua, the supermarket is at the door. It is not closed on New Year's Eve. There is no need to store food.

But the old man didn't want to. Although he couldn't say anything, he just said: This is the rule!

Egg and flour cake, sesame flower with butter and honey, and Mafu steamed stuffed bun unique to the north.

It is estimated that people in the South rarely eat steamed stuffed buns with this kind of stuffing. First, use the fresh hemp, that is, the oil pressing hemp (Juma), and grind it slowly with a small stone mill.

When the oil of pockmarks is fully squeezed out to form a sticky shape with a layer of oil film, then pour cold water and filter it from the clean gauze.

Filter out the shell of pockmarked seeds, and then put it into the boiling water pot. In an instant, the meat protein of pockmarked seeds solidified in hot water, and turned into grayish brown tender tofu.

Pick it up for standby.

A lot of shallots are chopped, mixed with green salt, and then wrapped into steamed stuffed buns. Darling, there is both the smell of oil and the taste of protein. A mouthful of hot steamed stuffed buns can definitely meet the face and stomach of people in northern China.

Pasta is still small. Zhang Fan's father is best at making marinated meat, pig feet and pig tails. Things that were worthless in those days are now more expensive than pork.

Rock sugar is colored, big stuff is the bottom, iron bar is tied on the pig skin ninety-nine eighty-one times, simmer and cook, and the aroma is so diffuse in the whole room.

Boiled stew has a hot taste when it is hot. It will be more delicious when it is cold. The soft skin and meat of q-bomb will be full of happiness when it is bitten down.

Shaohua's father makes the best fish, all kinds of fish, fried, stewed and braised.

To tell you the truth, Zhang Fan likes fish better than meat. The old man is particularly proud of this.

After taking a bath, Zhang Fan lay lazily on the sofa and didn't want to move. His mind was empty. He didn't want to think about anything or consider anything.

Listening to the laughter and conversation of the family, this is probably happiness.

"He has become an uncle. He doesn't even have to take his slippers when he comes in. His in laws can't spoil him too much!

When I was as young as him, I finished my work during the day and had to cook at home from time to time. Where I was like him, I waited to eat when I came in. "

In fact, Zhang Fan's father still loves his son, but his in laws and daughter-in-law are there. What he thinks in his heart must be different from what he says in his mouth.

"Hey, we used to do rough work. We didn't bother or bother. Zhang Fan is different. In the unit, we not only have to take care of all aspects, but also have to be careful and worry about surgery."

Since his marriage, Shao Hua's father has become more and more in the community and the farm. The former leaders nodded slightly when they saw him, but now they take out cigarettes from a distance. It's really polite.

Now the more the old man looks at Zhang Fan, the more he thinks he has a good eye. Sometimes the old man is also proud. Hey, it's good to choose a son-in-law to play chess!

Shao Hua smiled and listened to the old people chatting. From time to time, he ran to the living room with the newly made food and stuffed it into Zhang Fan's mouth.

"Is it delicious?"

"Well, it's delicious. When I have a little rest, I'll cut vegetables and meat for you. "

"The kitchen is so big that there are too many people to stand, so you can rest. Comfort your father when you have dinner! "

"Huh?" Zhang Fan didn't react. There are two dads in the kitchen.

"Your father, Jingshu didn't come back this year. The old man is not happy."

"Oh, OK, this girl won't come back for the new year. What a habit! "

Zhang Fan nodded helplessly. Jing Shu's freshman year was over. The little girl was excellent in all aspects of her homework at school.

But in the famous schools with many demons, it can only be said that they are excellent rather than outstanding. Jiangsu, Zhejiang and Shanghai were originally the economic center of China, and the magic capital was the cream of the essence.

Many demons not only study well, but also have practical experience. Their family income can be called a company.

Jing Shu is a little unwilling. She wants to find a company to practice. Before the holiday, she called Zhang Fan and said she wants to find a company to practice.

Zhang Fan doesn't want to. He also thinks Jing Shu is an inexperienced little girl. In the profession of doctor, there are too many people and too many things he has seen.

He was not at ease, so he went to master modu, who agreed without thinking. Then the little girl was arranged to practice in a world-class bank.

To tell the truth, not only Jingshu was stunned, but even Jingshu's classmates were stunned.

There is a legend in the financial industry that it is the top financial industry in the world, as long as the graduates of the golden mean and Huaqing. As a result, quiet Jing Shu was invited to practice.

Other people think Jingshu is a low-key cow forced second generation. In fact, only a few little girls in Jingshu dormitory know that Jingshu has a brother!

If the old girl doesn't come, I'm not happy to be an old man. For this stubborn son since childhood, I really can't replace my lovely old girl.

It's Chinese New Year. Not only at home, but also in the hospital. All kinds of summary meetings and all kinds of plans and statements for the coming year are signed. Zhang Fan's hand hurts.

Cardiothoracic surgery opened. Zhang Fan looked at the foundation inside. He was angry and irritable. He directly closed the door and went to the cardiology department. All things were pushed to Ouyang.

In the morning meeting of Cardiology Department, Ren Li was also busy with the hospital recently, so she didn't come to the morning meeting these days. When a group of doctors and nurses were going to prepare for the shift handover meeting, Zhang Fan came.

Pushing open the door of the doctor's office, Zhang Fan came in with the director of the medical office.

The doctors and nurses in the office room opened their mouths one by one and looked at Zhang Fan with an incredible look.

Zhang Fan is the dean in charge of surgery. Moreover, after he was transferred from cardiology, he never came again. This time, he came suddenly, which surprised everyone.

"Zhang Yuan!" The director of Cardiology quickly stopped the meeting and greeted Zhang Fan.

"It's all right, it's all right. Routine ward rounds. You hand over your shift, and the director of the medical department and I will sit in." Zhang Fan smiled.

The flower kept squeezing Zhang Fan's eyes. Zhang Fan pretended not to see it. The flower pursed its lips and whispered, "what's the look!"

"First of all, welcome hospital Zhang to the Department of Cardiology for leadership rounds. Hospital Zhang is a leader we can't hope for. Today, we finally hope to come. Everyone applauds."

The doctors and nurses all applauded warmly.

Especially the young nurses, the year before last, Zhang Fan was transferred to a department of Cardiology and was very familiar with them. As soon as he turned around, when he came to cardiology again, Zhang Fan was already the dean.

However, after all, the Dean used to be very close to them. Therefore, young nurses and young doctors have the feeling that the dean is very close to me.

Therefore, everyone's applause was very warm.

"Hehe, director re is right. I neglected the internal medicine. From then on, I will often come to the cardiology department.

After all, this is also my mother's home. The first department I transferred to was cardiology.

Here are not only my colleagues, but also my teachers. Everyone will treat me as a new colleague who has come to transfer, and treat me equally! "

Zhang Fan said that young people's eyes are full of stars. See, see, people are all presidents. They are not so arrogant, unlike some people

The head nurse, however, has a different idea: is Ouyang leaving? Is secretary Ren leaving? Zhang Yuan came to the bottom in advance?

Director heat, her full name is too long. She asked everyone to call her hot Guli. What she didn't know was that it was milk tea.

Ouyang has been the inner director of the bird market for more than ten years. He has gone away. I don't know how many people. Then Ouyang became an official and directly dug up Ren Li from the bird market.

A lot of people looked at it eagerly. As a result, they left tea vegetarians and went away with loss.

Ren Li became the Secretary directly after she became the director for a short time. Although she was also the director in her heart, she was already a hospital level leader after all.

Therefore, in the Department, other people have gone. Among the doctors at the director level, the level of reguli is the best.

Re Guli thought she was a deputy director until she retired, because she was about the same age as Ren Li.

Unexpectedly, in less than a year, Ouyang and Ren Li had asked her to preside over the work.

If you want to say the beauty of the hospital, the younger generation won't say it first. After all, where is the age? The collagen on the face can't be distinguished.

But old beauties are estimated to be among the top three in terms of beauty.

Reguli, grandpa is Uyghur, grandma is Mongolian, grandpa is Han and grandma is Russian. It can be said that her appearance has definitely absorbed their advantages.

The natural light yellow curly hair with a little bit is not the clear 3000 green silk of the Chinese, but a hairy feeling.

Big eyes with a little blue, high under the bridge of the nose, ruddy lips.

To tell the truth, when she opened her eyes and didn't speak, she really felt like a doll.

People are beautiful, but also quite smart. Not only smart and beautiful, but also hard-working. Director heat is the leader of the current intervention in his heart.

Ouyang is so picky that he can't find any faults in others. It can be said that she is a beauty integrating wisdom and beauty.

After the routine shift handover, when the director and Zhang Fan finished speaking, the doctors and nurses rushed over.
