

Chapter 851

A few years ago, people helped people secretly. Even if they helped people, they wouldn't make a lot of noise. They wanted to let others know. It is estimated that it is influenced by the government.

Dr. Cha Su was ordered to provide emergency assistance to Pakistan. After returning to the hospital, the unit did not hold any commendation meeting.

That is to say, there is an extra travel allowance on the payroll of the travelers.

No one is dissatisfied, because this kind of trip is too common for doctors. This time, the army was protected with weapons.

Different people have different opinions on whether this way is good or not. Such a thing happened in the era of Lao Huang.

After a patient was hospitalized in the hospital, he felt that the doctor in charge of the bed was good and his medical attitude was very good.

Then he secretly stuffed a red envelope for the doctor, and then he ran away. I don't know whether the little doctor had gone through ideological struggle.

Anyway, the red envelope was turned in at last. When Lao Huang heard it, it was a benchmark. It was typical and should be carried forward.

Then, remember, doctors and patients took photos with red envelopes. At that time, it was really embarrassing.

The little doctor had a loveless expression on his face, and the patient also had a dog expression.

Zhang Fan and them returned to tea vegetable. Xue Fei couldn't fly because they didn't give a command. They boasted and forced everyone.

"Have you ever been abroad?"

The other party rolled his eyes.

"Have you ever been in an armed helicopter?"

The other party began to look directly at him.

"When you go abroad in an armed helicopter, do you have a dressed army and a fully armed army to protect the whole process? Have you ever had such treatment?"

"Brag." Each other's mouths are open.

"Come, come, come. Let me tell you! "

Really, for people in ordinary industries, this thing can really boast for a lifetime.

Not long after Zhang Fan and his family returned to tea vegetable, the helicopter donated by the emirate also arrived at tea vegetable.

Ouyang's happy mouth couldn't close. We go to the rescue, the government can not publicize because of various factors.

However, if I have a helicopter and don't publicize it, Ouyang definitely doesn't agree.

Therefore, on the day when the helicopter was handed over, there was a hospital in the northern frontier. Ouyang all sent invitations to them to watch the ceremony.

If the southern frontier were not too far away, thousands of kilometers, she would like to be notified even by the hospitals in the southern frontier.

There is no shortage of social sages. I don't care whether you come or not, but I want you to know that there are helicopters in our hospital.

In the courtyard of the hospital, Ouyang generously let the logistics department set up a stage.

Looking at Ouyang with little Safflower on the stage, the leader of tea vegetable finance is estimated to be crying.

Many people may not understand. They always think that a sub provincial area can't afford a helicopter?

Actually, where does this thing score. For example, it's definitely not a thing to put it in coastal cities.

However, this is in the northwest, near the national gate of China. The economy here is too backward to do well. It is not as powerful as a prefecture level city.

Therefore, looking at Ouyang and looking at the card-32 parked on the side, the leader in charge of Finance twitched for a while.

The plane was dressed in red and hung like a college student.

The president of the tea vegetable traditional Chinese medicine hospital didn't come, but the vice president came. People don't envy him this time.

He also knows that in the next few years, it can only be found in the tea vegetable hospital.

What I really envy are several big hospitals in bird city. They also came, but none of them came as the boss. They are all deputies.

"You say, can she earn a year's expenses for such a big guy?"

The Secretary of the Central Hospital looked at the people in the surrounding hospitals and warmly surrounded Ouyang. His mouth was sour and whispered to the Secretary of the affiliated hospital around him.

For those engaged in administration, this is a proper political achievement.

In the past, when they came to prefectural and county hospitals, they were not the center.

Even if the leaders of prefectures and counties will give them some face, but now, the first medical rescue plane in the frontier is located in the tea vegetable hospital.

It was not given by the government, but taken from the affiliated hospital.

If they get it by skill, even if they are sad, they can't speak.

"Hey, who knows, we made a report the year before last, and the government didn't approve it!"

The Secretary of the Affiliated Hospital said indifferently.

The government leader gave full praise to international friendship. He cried in his heart. Can't you give him a cheaper one!

The leaders in charge of health come from the emirate. Their expression is similar to that of the leaders in China. It is estimated that he also has meat pain. There are few in their country!

Ouyang finished his speech in high spirits, and then let Zhang Fan speak on the stage.

Originally, the agenda of the conference was put on by Zhang Fan. Zhang Fan didn't want to. He didn't know what to say.

Thanks to the emirate? Or thank you for what?

Ouyang patted the table. "If you can't thank anyone, go up and talk about the scientific research achievements of our hospital in the past two years."

Who is the happiest when Zhang Fan speaks on the stage, Shao Hua!

People are contradictory. Every time Zhang Fan sets out to a dangerous place to treat the wounded, Shaohua wants Zhang Fan to be a little doctor.

And when Zhang Fan appears on this occasion every time, she wants to dress up Zhang Fan as a solemn old city, but also not too old-fashioned and lose vitality.

It took a lot of effort anyway.

Zhang Fan was wearing a suit and tie, and Shaohua gave him mousse on his short hair.

"Hello, distinguished guests, leaders and colleagues.

Since 2009, our hospital has made some achievements in the application of scald materials in conjunction with Professor Li Housen of the capital.

At the International Annual Conference on burns, it was not only recognized by domestic and overseas peer scholars.

Moreover, at present, only the hospitals for clinical trials include the people's Hospital of catechin City, Mayo of the United States, the United University Hospital in Berlin, Germany, the Royal Hospital of the United Kingdom, the Affiliated Hospital of Rice University in Marubeni, and the golden mean hospital in China.

I believe that when the new materials are promoted clinically, they will bring qualitative changes to the treatment of burn patients.

Tea vegetable hospital has gone through dozens of spring and autumn from wind and rain, especially our general foreign teachers.

At present, more than 200 operations have been performed in our hospital for the central resection of liver tumors.

Although the cure time has not reached five years, the cure rate of our hospital can be as high as about

80% for the resection of non-proliferation central tumors.

Although the number of operations can not reach a certain amount of data, but... "

At the beginning of the meeting, everyone chatted and everyone knew that Ouyang showed off his anger.

Therefore, we didn't take it seriously, but when Zhang Fan came to power, he didn't take it seriously at the beginning and gradually became concerned.

Most of the participants were from the medical industry. The more they listened to Zhang Fan's report, the more surprised they were.

"How many tumors have we done in the liver center of our hospital?"

Off the court, some prefectures and counties did not know the leaders of general surgery very well, so they began to call their own surgical director.

"Well, we haven't even made a few micro and small ones. Where dare we be central!"

The director of general surgery thought his leader was drunk and began to talk nonsense.

"Come on, let the director of the hospital office send a letter to the people's Hospital of chasu City, saying that we send doctors to study ~!"

Hurry up. If you're slow, there's probably no place. "

The director of general foreign affairs understood as soon as he heard it.

With Zhang Fan's report, many people in the venue called.

Virtually, the people's Hospital of chasu city has gradually become a medical center in the eyes of peers in the frontier.

The social sages listened to Zhang Fan's report. Although they didn't understand it, they didn't know how to listen and how to feel tall.

Besides, do you see that big plane, the frontier and the hospital!

Ah! Even there are no senior official hospitals in bird city in the frontier.

What else can we hesitate, "have you done the physical examination of the unit this year, what? Did you? The hospital, X field gave you a rebate.

Call back and come to the tea vegetable hospital for a new physical examination! "

Ouyang sat on the rostrum with his mouth tilted, looked at Zhang Fan talking on the stage, listened to everyone's phone calls, and her heart was as sweet as drinking honey. She wanted this effect.

I don't know whether quantitative change has reached qualitative change, but the land around the hospital began to rise slowly after the meeting.

It is said that Qinghua spent a lot of money to build a hotel opposite the hospital.

The days passed day by day. With the pace of spring, the tea vegetable weather became hotter and hotter.

Although the girls are not suspenders, the T-shirts with their navel exposed are the upper body.

I don't know whether it was hot or people began to get upset. On this day, there was an event that made people hate and pity.

On a street of tea vegetable, there are two adjacent shops, one with glasses and the other with hardware.

In other words, the two shops are not in the same industry. They all say that peers are enemies, but they don't interrupt, and there is no conflict.

I don't know why the two female shop owners despise each other.

In the past, we often had a small quarrel every three days and a big quarrel every five days.

Both of them are in their 30s and early 40s. They are also blessed. They can be regarded as typical middle-aged women in Northwest China.

After three hot days, there was a continuous light rain in the sky. The female boss with glasses put her flowerpot under the eaves in the center of the two shops.

The female boss of the hardware store was not happy and pushed the flowerpot with a broom.

They began to scold me, I scolded you, and kept pushing the flowerpot.

If the flowerpot can speak, it's estimated that it's none of my business!

Pushing and pushing, they pushed out the fire, and then their eyes met. The continuous spring rain did not extinguish their anger.

I don't know who came out first. They tore together across the middle line.

This kind of middle-aged women who have married and had children and worked in the market for many years say it's really hot.

From the front to the middle of the street.

They are similar in stature, physique and even hairstyle.

A hot curly hair was torn, and the tired hair scattered all over the floor. In fact, this kind of fight, if no one persuades, no one answers, and if you fight, you will lose your strength and let go of each other's curse.

Then go home!

But it's bad in the surrounding shops and neighbors. It looks like persuasion, but it's clearly coming to an end. They go up, "OK, don't fight. You see, your hair has fallen off the ground and your clothes are broken. Stop fighting! "

Then, the panting women looked at the ground and clothes. They always felt that they had suffered a loss, and then tore them together. The more they fought, the more they got angry.

On a rainy day, there are no passers-by in the street. It is estimated that there are passers-by. A warm-hearted person will call 110 and it will be over.

The bad thing is that they do business together for many years. It is estimated that everyone is a lot dirty on weekdays.

Just watched them fight together, but no one called the police.

His face was broken, he saw blood, his anger was getting bigger and bigger, and his abusive words began to be more and more ugly.

Just when they scratched their faces, pulled off their hair, tore their clothes, came out of their underwear, and even their pants began to show flesh.

The husband of the woman boss with glasses is here. Looking at the people around is like looking at playing monkeys, and then looking at his wife's face is like flower skin green dates.

He went up and kicked the hardware boss. The woman who had almost lost her strength was kicked into the ditch.

The woman was also tough. She didn't even cry. She bit her teeth.

One dozen two, of course.

Things are getting more and more serious. The people who put up seedlings around are also slowly away, standing on the side and watching quietly.

I don't know who called the husband of the hardware boss. The husband of the hardware boss also came.

I'm really watching the excitement. I'm not afraid of big things. Sometimes, it's often like this. It's a little trivial. As a result, it can't end.

Looking at the muddy water and footprints on her wife, when the hardware boss saw her husband, she looked like a female wolf and burst into tears.

Without saying a word, the man picked up the sharp edged meat cutter next door and ran over.

Red eyes, run fast, but there is no sound in your mouth. It's running to death!

Chapter 852

Biting dogs don't bark, cruel people don't talk hard easily. Sometimes this is really good.

Some Chihuahuas that don't look barking and scream show their teeth. Their white teeth leak out. They seem very fierce. If you bend down and pick up a stone, it can frighten you to pee.

The men and women in the glasses shop were angry when the hardware boss didn't come.

He grabbed the female boss of the hardware store and made a good fight. That is, he had more meat and could resist. If he were younger and thinner, he would have been beaten down.

It's comfortable to play, and I'm out of breath. When he saw the other party rushing over with a meat picking knife, the male boss of the optical shop probably jumped on his temples.

"Run!" The female boss of the optical shop reacted and shouted at her husband.

Then, with an expression of extreme despair and fear, he stretched his hands forward, like pushing the air, "I'm wrong, I'm wrong, you beat me, really, don't!"

I saw the owner of the hardware store with red eyes. The rain brushed his face and his eyes. He didn't even blink and bit his lips!

For a few seconds, when most people haven't reacted, a man's bone removal knife is like a knife and fork inserted into a cream cake.

With the woman saying no and puffing, the knife was inserted under the back rib of the male owner of the optical shop.

The male owner of the optical shop didn't even run out for three steps, so he plopped on the concrete floor.

Blood and rain flowed down the channel like broken red ink.

One hit is accurate, without a little hesitation. The tip of the knife is down. When it is pulled out, the blood is like a fountain.

In my ears, two women who had just fought sent out amazing screams, and their eyes almost stared out of their eyes.

In particular, the female owner of the glasses shop felt numb in her tongue and trembled all over her body, and her urine couldn't hold back.

The male boss of the hardware store turned his head, with an iron green face and fierce eyes, like killing God and swallowing people.

As a backhand colleague, the knife scratched along the neck of the female owner of the optical shop.

Plop, the woman fell to the ground like a sack, without even a sound.

The female boss of the hardware store had tears on her face, but now she stared at her man. Suddenly, she seemed to wake up.

"God, you go, throw the knife, go!" As she climbed to the man, she would take off the knife.

The man gently touched the woman's face, smiled, and then gently pushed her away.

Then he raised his head and looked at the people around him with Eagle like eyes.

Fighting, fighting, especially when the blood is hot, this middle-aged man is often the most terrible.

The world outlook and outlook on life have been completely stereotyped. Often once such people are cruel, they have no lack of strength and experience. They are definitely not comparable to gangsters on the streets.

If you don't make a move, you often go in the direction of human life.

The man held a bloody bone removal knife and looked at the surrounding neighbors.

Some of the relationships in the past were fairly good, with a pair of flattering and timid eyes.

Some people who had festivals in the past began to tremble in their legs and stomach. Carrying a knife, step by step, he went to a dry fruit shop owner who had a bad relationship in the past and was strong and often picked things up.

The boss who sells dried fruit looks at five big and three thick, with Eagle embroidered dragon on his arm. At this time, he looks at the knife, at the man, and at the man's eyes.

He wanted to run, but his legs and stomach cramped. He couldn't move a step away. He wanted to say a few words, but his mouth was so dry that his tongue was stuck in his mouth like paste.

The female boss selling dried fruits was about to scream. As a result, the man with the knife turned his head and she was almost stunned.

Really, no one is afraid of death.

Plop, the boss selling dried fruit knelt down directly: "adaxi, good brother, I'm wrong, I'm wrong. Let me go! "

The ticking blood flows down the knife, which is particularly frightening in the gloomy weather.

There's no one to stand the seedlings, and there's no one to watch the excitement. They knew that the man had killed red eyes, closed the door, and the iron lock with a big fist could not hang in the lock.

When the man was about to cut, he only heard a clear cry.

When the students finished school, the girl of the hardware store owner and the girl of the eye store owner ran home happily while hiding from the rain and deliberately stepping on the spray.

However, the scene in front of them stunned the two little girls, and the little girls of each family ran towards their parents.

"Mom!"

"Mom, Dad! What's the matter with you? What's the matter with you! "

The crisp cry, the tearing cry, where is the little girl kneeling.

"Mom, Dad!" The girl knelt, touching her mother and shaking her father.

Tears are more than rain.

The young face was full of fear and sadness.

The female boss of the hardware store had fainted, angry and angry. Then she fainted in shock and anger when she saw her husband kill someone.

Her daughter saw her mother lying in the rain, shouting and shaking desperately.

The muddy water on the white school uniform was suddenly full, and the father and daughter were connected. When the child cried loudly in fear.

The man looked back and the child looked up.

"Dad! Dad! " She screamed. Although the child didn't know anything, she seemed to know that her father couldn't do this again.

The child knelt in the rain, his white face shouted because of panic, and the blue blood vessels were exposed between his temples.

Looking at her girl, looking at her heart and lungs, praying, looking forward to and longing to look at herself.

The man burst into tears and the knife in his hand fell to the ground.

The boss selling dried fruit and the boss with big and thick ears listened to the clatter and sat down on the ground. A stream of water came out with the stench.

It is estimated that even the beard on his face is hung with frightened sweat.

"Dad! Dad! " Watching her father throw down the knife, the little girl ran over quickly, holding her father's legs and lifting her small face. Tears slowly flowed on her open mouth.

"Don't cry, don't cry, don't cry!" Men's tears can't stop flowing.

The little girl at the eye shop looked helplessly at the surrounding shops, "uncle, aunt, please, help my

father and my mother. Please, I kowtow to you. Help them! "

The little girl is like a chick who has lost a big bird. She trembles in the cold winter and the twelfth lunar month. Listening to the wailing sound makes people feel painful.

The neighbors across the iron gate dare not even show their heads.

"Go and see your mother. Don't let her catch cold."

With that, the little girl ran to her mother and tried her best to help her mother up.

The man wiped the rain and tears on his face, picked up the phone, called 120 first, and then 110!

Chapter 853

In early spring, the weather gets warmer, the earth atmosphere rises, and everything wakes up. There is an old Chinese saying that in early spring, people's kidney water is also the most vigorous time.

Zhang Fan is too busy these days. After receiving the rescue plane, the unit held a grand reception ceremony, which directly let the hospital colleagues in the surrounding cities know the power of tea vegetable hospital.

For those seeking further study and cooperation, Ouyang kept Zhang Fan busy for several days, which is estimated to be the most glorious moment of tea vegetable hospital in decades.

The number of people seeking further education alone is almost the same as that of the Central Hospital in bird city.

In fact, the number of trainees also reflects the strength of the hospital from one side.

There are some large hospitals. Don't look at the buildings one by one. Go in and have a look. There are not even a few young doctors behind the old doctor, so the hospital is definitely not developing well.

In many large hospitals, especially provincial hospitals, most of the doctors in the outpatient department are from this hospital.

Often into the ward, most of the workers are either graduate students or doctors who come to study.

The tea vegetable hospital has not been the first to receive trainees on such a large scale, so Ouyang and Zhang Fan went through it bit by bit from the preparation of accommodation to the training of department teachers.

Things are complicated and trivial. Zhang Fan finally opens his mouth for the first time and wants to have a rest at work.

This kind of thing takes no physical effort, but no mental effort. Everything is taken into account. The people under them have to ask for instructions on everything. They even have to ask for instructions on how many keys to prepare in the dormitory. Zhang fantou is big.

Impatient, he applied for leave, but there could only be three days. Ouyang disagreed over three days!

Spring is infinitely good. Wake up naturally after sleeping. Look at the green trees outside the window, look at the blue sky, and accept the warm spring sunshine. It's too comfortable.

The pores on his body felt comfortable and opened. After three days of rest, Zhang Fan came out of fatigue.

Looking at Shaohua in his arms, Zhang Fan really realized that what is the reason why kings don't go to court every day.

Looking at the flowers blooming in the sun, making a pot of tea in the spring rain, lying on the couch, listening to the rain ticking on the window, like a large-scale folk music performance.

If the wife is not nagging about where to clean up, it is definitely the most comfortable state for men.

Zhang Fan drinks tea slightly back to Gan, and checks the number of operations in the system in his mind.

"Outside the heart, the growth is too slow! I can't feel it outside the orthopaedic brain... "

Shao Hua is really helpless about Zhang Fan's habit of being in a daze when he has nothing to do.

He shouted to ask him to help get a mop. He promised well. He didn't see anyone for half an hour. He didn't know that he thought he was pressed on the ground by the mop.

But Shaohua also knows that Zhang Fan is too tired, so whenever Zhang Fan is in a daze, she will try not

to disturb him.

"I don't know. I thought I married a philosopher!" This is also Shaohua's ridicule of Zhang Fan every time Zhang Fan is in a daze.

Husband and wife are like this. They can appreciate each other's advantages and tolerate each other's shortcomings to a certain extent.

Shaohua's farm was built, and the farm cowboy didn't know. Anyway, there was a lot more meat at home.

In the past, Zhang Fan didn't eat beef and mutton for a month or two, and Zhang Fan didn't miss it much.

But after having a farm, the old men and women sent slaughtered chickens, ducks and sheep from time to time. If you don't eat, you can't put it in the refrigerator.

Therefore, because of the rain today, Shaohua is going to make a grab meal for Zhang Fan, and then drink a hot mutton soup. Zhang Fan consumes too much these two days and needs to make up.

Shaohua is the most cook for the young couple, but when it comes to meat, Zhang Fan is still delicious. This is not Zhang Fan's boast, but the result approved by Shaohua.

After breakfast, Shaohua began to prepare ingredients for Zhang Fan.

With the mutton sent by the old man, Zhang Fan washed it with water a little, and then began to put it on the pot.

After mutton is watered, skim the foam in the soup. This process must be patient.

With a slight fire, the brown foam formed by the blood in the gurgling soup is slowly skimmed away until the soup is as good as water.

Some people cook mutton, put a lot of spices, star anise, cardamom, and even throw in a handful of thirteen spices and some red medlar.

I can't wait to marinate it with spices.

It's hard to say whether it's delicious or not. First of all, the original flavor of mutton can't be eaten.

Northwest mutton, especially mutton grown in dry fields, only a handful of pepper, and no other spices.

Moreover, to what extent is the meat the most soft and rotten? Many people don't know.

This thing is not as soft and rotten as possible. If it is too rotten and takes off its bones, it tastes like steamed bread with mutton oil. It can only make people more and more bored.

Experienced Taotie has its own methods. For example, judging by the strength of chopsticks inserted into meat, ordinary people can't master it at all.

Zhang Fan's method is very simple, but also very effective.

When you pick up a three finger thick, fat and thin sheep rib and see the mutton trembling on the bone, the mutton is just right at this time.

It is definitely soft but not rotten. It has both the strength of lean meat and the plumpness of fat meat. It is definitely not a feeling of rotten oil.

Zhang Fan gets mutton and Shaohua prepares rice for grabbing rice. The couple is running their love life.

In fact, this is the life most expected by ordinary people. Where does life have so much vitality.

Life is actually oil, salt, sauce and vinegar. Only with love and good heat can we manage the supreme delicious life and happiness.

The cooked mutton was put into Shao Hua's pilaf with soup and began to stew. For a time, the aroma of tea, rice and mutton were so sweet.

Seeing that the meal was ready and was about to come out of the pot, Zhang Fan patted the cucumber and was ready to get a cold dish, the phone rang.

In three days, Zhang Fan's work phone never rang. Shao Hua really hopes that the phone will never ring.

However, a rapid bell broke Shaohua's dream, but Shaohua didn't delay a little.

She knew that her man was a doctor, a doctor who saved the lives and healed the wounded, and the person most needed when others were most dangerous.

Zhang Fan had water in his hand. Shaohua quickly took the phone and put the button on Zhang Fan's ear.

"Zhang Yuan, come on, the hospital 120 is about to send two critically wounded, so I have to beat you..."

"I'll be right there!" Zhang Fan immediately interrupted the director of the medical office. When the phone rang, he actually took off his apron and began to clean his hands.

After hanging up, Shaohua looked at the rice in the pot. She couldn't even say if you took a bite and went again.

"I'll take you!" These three days made Shaohua more attached to Zhang Fan. Zhang Fan nodded.

They quickly went downstairs, started the car and ran towards the hospital.

Just a dozen minutes ago, I was about to get off work. The hospital 120 received an emergency call.

Xue Fei had planned to go home, but he watched his doctors busy all morning and had to go out again at noon.

He is a little impatient. After all, he is a leader. He can come or not in the afternoon, but his doctors can't.

Therefore, Xue Fei asked the doctor to go to dinner quickly, and he took the place of the doctor.

In fact, people are like this. When there is no platform, there is another kind with a platform.

Xue Fei's reputation in other departments is hard to say, but since he came back from his studies, doctors from all over the emergency center are convinced of Xue Fei.

120 headed for the accident site, 110 also began to sound the alarm and galloped in the rain.

When 120 entered the roadway and Xue Fei clearly saw the scene in the street from the co pilot's position, his hair stood up.

The blood was dripping with rain, and the street was covered with red blisters.

The two children knelt in the rain. The street was like a ghost town. There was no onlooker.

"Come on!" Xue Fei jumped down before the car stopped completely.

Ignoring the newly bought leather shoes, Xue Fei, who got out of the car, ran to the man for the first time with a first-aid kit in his hand.

"What's going on!" There was only one tottering baby crying into tears.

"Dad! dad! And mom! " The more the child said, the more he said, the more sad he was. The sad tears were like broken pearls!

"Come on! Hemostatic cotton yarn, cardiogenic! Come on! " The child can't say anything. Xue Fei didn't care to comfort the child.

Xue Fei, who was kneeling on the ground, pressed the back of the man with one hand like a watermelon. When he opened a hole, he could see the wound of red soil.

He kept holding gauze and stuffed it inside.

"Director, the women here can't!"

Xue Feihan came out in the heavy rain. Really, emergency doctors are hard to do.

Fortunately, 110 came in time, and the police helped the man who had been preliminarily treated to get into the car under the command of the nurse.

Xue Fei, covered in mud and water, has knelt beside the woman.

Xue Fei is not sure whether a man can live or not. It looks like an injured part, but it's a sharp weapon from the back of his waist.

The upper point is the bottom of the lung, the next point is the kidney, the first point is the liver, and the left is the intestine. Anyway, the other side can kill people.

The woman, from the neck to the chin, is like a red line lifting the skin, and the blood burst out from the long red line like a waterfall.

The cotton white short sleeves worn in spring are dyed into red rags. The torn scars on his face are so obvious that his pale face is like he has died.

The bandage, like a mummy, was wrapped around the woman's neck by Xue Feifei.

Another one was lying on the ground, and Xue Fei's hands began to tremble. It was clearly a vicious fight.

In the hearts of emergency doctors, they are not afraid of traffic accidents and disasters, they are afraid of drunken people making trouble, and they are afraid of fighting.

Sometimes, in these two cases, doctors not only want to save people, but also guard against their own life safety at all times!

"Mom! mom! dad! Dad! "

The male and female owners of the optical shop were carried into 120. The child of the owner of the optical shop fell, got up, got up, fell to 120 and cried loudly like a stray cub.

Xue Fei can face the cry of any adult and the sadness of any adult. After several years of medical treatment, his heart has long hardened. But he just couldn't see the baby's sorrow.

He hesitated a little, picked up the bloody child and entered the 120 co pilot.

There was a vicious wounding incident, and it wasn't long before the police closed the road here.

The male boss of the hardware store was taken away. His child curled up at the door of the store, looked wrongly outside, wanted to cry, dared not cry, and his little face was filled with endless panic.

"Come on, call Zhang Yuan, come on, or it's too late! Prepare a large amount of plasma. Be quick. The patient will go to the hospital right away. " Xue Fei called the hospital within 120 miles.

The little doll in his arms trembled nervously, and tears kept falling, but there was no sound of crying.

Xue Fei's heart is clenched together. He knows that now he can only rely on Zhang Fan to save people. Organ damage and blood loss are so serious that no one is sure to save people except Zhang Fan.

Zhang Fan entered the hospital without saying a word to Shao huaduo. He got out of the car and ran to the emergency center.

Shao Hua looked at Zhang Fan who was far away and sighed slightly.

In the emergency center, the doctors and nurses who have just taken up their jobs have been on standby.

"Zhang Yuan, three people were injured in the vicious fight, two of them were critically ill and were dying."

When the director of the medical office saw Zhang Fan, he came forward to report at the first time.

"OK, is the rescue equipment ready? Did the physician inform you? "

"Ready. Internal medicine doctors are also on standby. "

"Plasma..." the voice didn't fall, just like jumping and galloping 120 drove into the hospital.

"Flat car!" Needless to say, in groups of three, flat cars are waiting on the reception platform quickly.

Boom!

The door opened, and the face was powdered. The two people who were white to the extreme were transferred from the 120 car.

The two men with pale faces supported the blood colored clothes on their bodies, which were so dazzling.

Xue Fei also jumped down and ran towards the operation with the flat car. There was no need to check.

It was too late for any check.

Now is to seize the time, shed one more minute of blood, and the wounded will move a little towards the death line.

The child who got out of the car looked pitifully at his parents being pushed away.

On the open mouth, the bubbles of saliva were on the edge of his mouth, sobbing softly, and his trembling body trembled slightly at the door of the emergency Hall of the hospital.

What's wrong with her?

What's wrong with her at the door of the shop?

The director of the medical office gently wiped the child's face with a warm big hand.

"It's all right, it's all right. When they get to the hospital, they'll be all right!"

Chapter 854

"Secretary Ren, come on, you divide into two groups to correct the shock. Director Zhao, you and Lao Chen, Lao Wang, you and me. Come on, go to surgery first."

Zhang Fan gives orders to Ren Li, the director in his heart, and Zhao Quanping, the director of general foreign studies.

This traumatic shock must not be vague. Any examination or conversation must be delayed.

Every minute can't be delayed. At this time, what doctors protect themselves and worry that doctors will be involved in patients' accidents.

At this time, they don't even think about it. This is responsibility, this is responsibility.

If at this time, he still cares about the consequences and is afraid of taking responsibility, the doctor will wear a white coat in vain.

At this time, the bleeding must be stopped while correcting the shock.

People's sympathy and compassion are actually like feelings. For example, compared with other industries, doctors and police have a higher threshold of sympathy and compassion.

They are used to seeing life and death parting and the dangers of the world. The longer you work in this industry, the more Facebook you will become.

For example, even if a policeman retires, he knows that he can't escape the public security law when he looks at his face.

The same goes for doctors.

This sublimated perception is different from people's innate perception, such as touch.

People's emotions are less and less used, and the touch feeling is more and more sensitive, such as touching the package of the human body.

Skilled people can feel it when the diameter of the package is one centimeter.

Not for unskilled people. It is estimated that the package will be a little bigger to feel it.

Although it is a little bigger, it is often a little worse when the mass changes from benign tumor to malignant tumor.

Of course, Zhang Fan's current sensitivity can be perceived when the package is about 0.8cm, which is comparable to color Doppler ultrasound.

This is the experience from a large number of physical examinations. For example, sometimes when he goes to bed at night, Zhang fan can't help doing a breast examination for Shaohua.

This is subconscious, but in fact, this test should be mastered by every man.

Don't men like big and plump. In fact, the larger the breast, the easier it is to grow breast tumors.

This kind of inspection is very simple, not too difficult, and the technology is not too profound. It can be said that as long as you have one hand.

Everyone has rubbed oil on their faces. In fact, this inspection is like this. The four fingers are close

together, starting from the armpit, the four fingers exert a slight force, and the finger abdomen probes into the fat.

Then start from the armpit and move down slowly. It should be slow. Of course, experienced ones can be a little faster.

Open from the armpit, start to turn around the breast, and finally pinch the five fingers at the small pimple in the center to feel whether there is a foreign body.

Really, don't look like it's very funny. In fact, when you are free, this check not only regulates the feelings between husband and wife, but also prevents trouble for your lover.

It's definitely a good thing to kill two birds with one stone.

Don't just be hungry like a child. You don't have any technical content at all.

This sensitivity can be exercised the day after tomorrow, and the human body is also particular about the loss of blood.

Most of the deaths caused by trauma are often due to shock.

It can be said that shock is the real culprit. In fact, many human diseases have serious consequences because of blood.

For example, AIDS, the three ways of transmission, in fact, when you think about it, are all related to blood. Why not say kissing, but physical education?

This is because the cell membrane falls off between friction, leading to the rupture of superficial capillaries, so the virus enters the blood vessels.

It is the entry of the virus that causes an infection in the blood.

And how much can bleeding be fatal.

In normal adults, the weight of blood accounts for about 7% to 8% of body weight. Under normal circumstances, this proportion is constant and generally does not exceed 10%.

When the blood loss does not reach 8% of the blood volume, in fact, this blood will not have obvious clinical symptoms for the body.

When people constrict their blood vessels, they will raise their blood pressure to a normal level, so the vascular system of the body is very good.

When the blood loss is 10% of the weight, the body fluid in the body enters the blood vessels and acts as

a filler for vascular pressure.

Then the liver quickly synthesizes albumin, which can be said to recover in a day.

The body is not afraid of chronic blood loss.

For example, a female's period, a cycle, is about 100 to 300 ml of blood, which varies more or less from person to person.

In a week's time, to tell the truth, this blood is estimated to have not flowed clean. The body's metabolism has come again.

This is also the reason why women have no abnormal physical discomfort during physiological period.

This is also the reason why women have syncope on the first day and at the beginning of the second day.

The loss is too fast, and the body can't compensate.

And this physiological chronic blood loss can also stimulate the regeneration of blood vessels. Therefore, the elasticity of blood vessels in women who have not entered menopause is better than that in men.

Cardiovascular disease is much lower than that of men, which is why men are extremely prone to sudden death. There is no period!

The body is really not afraid of chronic blood loss. Sometimes, when the loss of blood is as high as 30%, the body will have shock.

However, when rapid blood loss occurs, it is different. There is no need to lose much in this situation. Once it exceeds 10%, shock will occur.

Because at this time, the body's compensation mechanism can no longer achieve the function of balancing blood pressure. First, blood pressure can't get up.

Many people have heard of shock, but what is shock? In fact, commonly speaking, it is an obstacle to blood perfusion.

There are many types of shock, such as blood loss.

And severe diarrhea and vomiting. Especially children, in their early years, many children often died of diarrhea and high fever.

Now it seems that diarrhea is not serious because the medical environment and sanitary conditions have improved a lot.

Now diarrhea pulled off the anus seems to be the most serious situation.

To tell you the truth, anal prolapse can't kill anyone. But a large amount of fluid loss can kill people every minute. In fact, severe diarrhea is more popular. In fact, it is similar to the effect of arterial rupture and bleeding.

In the past, once there was diarrhea, it was that black and white impermanence had stood by people.

In addition to blood and fluid loss, there are burns, infections, cardiac dysfunction, allergies and strong nerve stimulation.

These can lead to shock. In fact, take a closer look, although the etiological mechanisms are different.

The consequences are the same, which is to cause obstruction of blood flow. Allergy, a large area of allergy, can lead to increased vascular permeability.

Just as after bees sting people, why do people swell up like hair all over their heads.

In fact, bee stings make the body produce a lot of factors that fight with allergic substances.

A fight between allergic substances and these factors eventually led to the blood vessels, which were originally silk stockings, suddenly turned into fishing net stockings.

Then all the blood ran from the blood vessels to the cells, and the human body quickly became a big steamed stuffed bun like a balloon filled with water.

Strong nerve stimulation will make capillaries spasm, and then blood reflux problems, and then turn into shock.

For example, some people will feel dizzy and numb after strong laughter and strong crying. In fact, this is the early stage of shock.

Laugh to death. This is not nonsense. This thing makes sense.

How to correct shock is actually to find a way to make the perfusion sufficient.

For example, in case of blood loss, a balanced salt solution with an estimated blood loss of two to three times shall be injected intravenously.

In fact, this is to stabilize the acid-base balance of the body with a balanced salt solution, and then cheat the body with this liquid to raise its blood pressure.

Lose blood, but the body's acid-base balance and blood pressure can't be corrected.

Then, this is directly the comprehensive collapse of the reservoir dam and the damage of various organs. Once this result occurs, the Jade Emperor will have no choice.

So, at this moment, the awesome nurse shows her importance.

Blood vessels, the blood vessels of normal people, are actually like a powder bar. They are full and smooth. Nurses with poor skills sometimes can't get in.

Why? Because this thing is smooth, it can avoid. When a sharp tool is inserted, the outer membrane of the blood vessel is as smooth as the mucus on the fish. It can avoid to a certain extent.

Often some nurses plunge in and look back and take out again. The patient with pain shows his teeth. This is the blood vessel. After avoiding, the nurse returns to the needle.

The ischemic blood vessels are actually stuck together like two pieces of white paper. At this time, it is much more difficult than being smooth. There is no chance to look back and take out. You must hit them with one blow, or you have to find blood vessels in another place.

To make a simple analogy, put a piece of pork on two pieces of paper and give you a needle.

I ask you to pierce the pork and pierce the first layer, but you can't hurt the second piece of paper.

Moreover, you have to let the needle move forward in the gap between paper and paper.

To tell you the truth, you may not be able to do it when you are calm.

Nurses, after this time, the flat car runs fast. Nurses not only have to keep up with the speed of the flat car, but also pierce the needle.

Really, it's all blood and tears and the ability to slap in the face.

The head nurse of the emergency center, the head nurse of the operating room, the head nurse of the orthopaedic department, the head nurse of the cardiology department, the head nurse of the respiratory department.

It can be said that almost all the most skilled nurses in the hospital came, four people, a flat car, both upper and lower limbs.

They bend over and lower their heads, grasp the patient's arm or ankle in one hand, and hold a needle in the other hand. They must move quickly under the soles of their feet to keep up with the speed of the flat car.

Why can't the step be too big? It's not afraid of pulling the egg, but the hand is unstable when the step is

big! To tell you the truth, this industry is too bullshit.

While the situation is urgent, I have to listen to Zhang Fan's urging voice: "is the venous channel open? Come on, if you can't, go away, I'll come!"

Really, not even two minutes. The head nurse's nurse hat is full of sweat. It's nervous and urgent. What's more, it's a sports war.

Really hard!

Although the head nurse in the operating room seems to have an affair with Zhang Fan, which is the way of life of others in the workplace.

Zhang Fan never takes it seriously. He not only can't take it seriously, but also pretends to be shy and avoid it.

If he really takes it seriously, the head nurse may slap him in the face!

The head nurse in the operation room looked at the monster, stealing perfume and lipstick every day, but the technology of others was really good.

The first one opened the vein of the man's upper limb. While running, the head nurse in the operating room shouted, "the vein channel of the right upper limb has been opened!"

The charming sound of the female voice, especially in this crisis, is so beautiful, especially the head nurse's voice is so charming!

One, two... Eight venous channels for a man and a woman, like Teletubbies, were all erected before entering the elevator.

The suspended liquid is bubbling and has quickly entered the patient's body. This is the ability, which is the embodiment of a hospital's comprehensive ability.

They and they are the mainstay of the hospital.

The police car came and went, and then in a hurry, the patient was sent to the operating table.

"Come on, Lao Li, I'll disinfect. You can lay sheets and anesthesia at the same time. You can't wait."

The main knife of male surgery is Zhang Fan, and the main knife of female surgery is the director of general surgery and the director of cardiothoracic surgery.

The operation begins!

The heavier the rain, a trace of red can be seen on the street.

However, sadness cannot be washed away by heavy rain.

Chapter 855

On the operating table in the operating room, like entering the telecommunications department, patients are hung with monitoring instruments.

ECG monitoring, blood oxygen monitoring, oxygen intubation, gastric intubation, urethral drainage, vessels of aspirator, venous suspension of plasma and liquid on limbs.

Although the line is not dense, it also makes people's scalp numb.

In particular, the transparent liquid and red blood vessels are divided into two ends like wires.

The invention of intravenous infusion can be said to be an invention that can pull patients back from the death line at a critical moment.

Many people wonder why the infusion is not in the artery but in the vein.

First of all, the artery is afraid of death. The larger artery is generally hidden deep. In an emergency, it is generally difficult to find it, and the vein is relatively superficial.

Secondly, the arterial pressure is relatively large. Without external pressure, it cannot be input. If pressurized, it may lead to the rupture of red blood cells in blood vessels.

Therefore, for general emergency infusion, veins are selected. As long as the liquid bottle is raised above the head, it is OK.

What is the situation of selecting the artery? For example, when the patient's vein cannot be selected, arterial infusion, to tell the truth, will be implemented only as a last resort.

But now many addicts, in order to get satisfaction more quickly, will plunge into the artery injection in the groin. Really, this way, once they are not careful, it will lead to massive arterial bleeding and consequences

Intravenous infusion, a life-saving treatment, makes people speechless when it is fully applied to the treatment of the common cold.

Is a cold treated with medicine?

no

This is a self-healing disease, the common cold. If you ignore it, it will recover, and the treatment is to reduce symptoms, such as stuffy nose and cough.

In other words, there is no difference between taking drugs and not taking drugs for a cold.

"Knife!" The operation preparation was very fast, and there was almost no pause in the connection of steps.

The patient's blood loss is too serious. The liquid injected can't hold the patient's blood flow at all.

Zhang Fan took the scalpel and began to expand along the wound on the patient's back.

If there is a fixed format for some abdominal surgery such as appendix and gallbladder.

Then this kind of traumatic rescue operation is an operation that doctors play freely.

It seems that free play is simpler, but in fact, free play is more difficult.

Over the years, doctors from generation to generation have found that accidents near organs can occur actively or passively.

Therefore, as long as you are serious and have a solid foundation, there will generally be no things such as cutting blood vessels and damaging nerves.

And this kind of free play will not work. Once one is not careful, it will make the patient worse.

The wound on the back of the male owner of the optical shop, the white fascia and red muscles have turned out.

Like a little fart child, he pouts his lips and bulges them out to reveal the red inside of his lips.

The patient's wound is spitting blood now.

The abdominal cavity of the human body is slightly larger than the atmosphere. It is estimated that most people have not seen it.

When a sharp weapon enters the abdomen, the wound is like farting. If you puff, it will emit a gas that seems smelly but never smells good.

This smell can be called Sao! It's like the smell of mouse urine evaporated on your hands.

"The blood doesn't coagulate and hurt the organs. How about the vital signs?"

Zhang Fan looked at the non coagulable congestion while deriving the incision along the wound. He was also worried.

"Blood pressure can't be measured. Cardiotonic drugs have been used!" The flower stared and reported to Zhang Fan.

The flower was assigned to Zhang Fan to participate in the patient's shock correction, and Ren Li went to another operating room.

Now everyone knows that the patient's life is on the line of life and death. Any little accident will lead to the patient's death.

The patient lay prone on the operating table. When cutting the abdominal cavity along the wound, the blood flowed out like boiled meat.

"Come on, pliers!" Sure enough, in the wound, the patient's spleen was inserted into a big hole, just like a broken apple, and the wound was in the same state as a petal.

After taking the bending forceps, Zhang Fan stuffed his left hand directly under his spleen, with the palm of his hand up and the back of his hand down.

Then he made a slight effort to free the nearby tissue and the damaged splenic hilum. In an instant, Zhang Fan's palm was filled with bright red blood.

Without hesitation, Zhang Fan clicked and clamped the inlet vessel of the spleen with a huge curved forceps.

Curved forceps like crocodiles bite the vessels of the splenic portal“ Lao Li, attractor! "

"Gauze!" Clamping the splenic door is not enough at this time. The wound of the spleen must be filled with gauze.

Lao Li, who acts as a helper, takes the attractor and puts it into Zhang Fan's left hand. The attractor is

like wordy watermelon juice.

The blood was sucked quickly, and the semi solidified blood clots in the blood were sucked in quickly in the transparent plastic pipe like the black melon seeds of watermelon juice.

"Increase the input and see if urine is produced? The wound has been clamped, quickly replenish the congestive capacity, and raise the blood pressure for the first time. "

Zhang Fan frowned and gave orders to anesthesiologists and physicians while operating.

"No urine, use diuretics!" The internal medicine correction shock group was relieved to hear that Zhang Fan stopped the bleeding.

Without hemostatic rescue, fill in a large amount of liquid, just like raising soup to stop boiling.

Only in order to maintain the patient's fragile blood pressure and the electrolytic balance facing collapse, the fundamental problem can not be solved.

Now that the bleeding from the wound has been stopped, they can show their skills. But Zhang Fan didn't relax a little, because the patient's spleen injury was more serious.

In western medicine, human organs can be represented by heart, lung, liver, kidney and brain plus a gastrointestinal tract.

The heart and lung are not separated, representing the respiratory and vascular system, the liver represents secretory immunity, and the kidney can represent the urinary system.

The brain can represent the central nervous system, while the gastrointestinal tract represents the digestive system.

So, which system does the spleen belong to?

Traditional Chinese medicine believes that the spleen changes water and valley into essence and transports the whole body.

The Yellow Emperor's Internal Classic Su Wen said: all dampness and swelling belong to the spleen.

Generally speaking, when a person is swollen, the problem lies in the spleen.

At that time, the ancestors of China did not know whether they opened the plug-in. How did they think of it? Although it was very general, the explanation was also very general.

However, in recent years, western medicine has slowly studied what the spleen is.

Earlier, western scholars believed that the function of spleen was very important in the fetal period. It was the hematopoietic system.

After adulthood, its function is replaced by bone marrow, so it is a useless organ in adults.

In recent years, the function of the spleen has been slowly discovered. First of all, the spleen can continue to make blood when it is not as good as my brother's bone marrow in a critical situation.

It can also filter blood. After human red blood cells age, the spleen will eat these aging red blood cells.

When this function is hyperactive, it not only eats aging red blood cells, but also healthy red blood cells, resulting in refractory anemia.

It also stores blood while eating red blood cells. When the human body is excited or ischemic, it will release the stored blood.

Therefore, the blood comes from the spleen.

There is a more important function: immune response.

After the human body is infected by bacteria or parasites, all kinds of combat factors in the spleen will be released. Moreover, it not only releases combat factors.

For example, Plasmodium, the spleen can eat it like sugar beans. It is a very domineering organ.

So, this thing is actually an armed part of the body.

However, its texture is not very good. It is very fragile. Just like the most fresh and tender water radish, it can definitely fall eight petals if it falls down and crackles.

Although it is hidden under the ribs, it is the most easily damaged and ruptured of all organs.

Moreover, this thing is not only easy to break, but also easy to cause splenectomy as long as it is damaged.

There is a saying in surgery that spleen preservation surgery is soul stirring. It only belongs to a noble surgical textbook and should not appear in the operating room.

The spleen is such a flammable and explosive organ.

In the surgical operating room, the physiological function is the emperor, the shape of the solution is the queen, and the doctor, a mature surgeon, can only be a prince.

All things can only be done secretly with the consent of the emperor and the queen, such as secretly

regulating a palace maid.

The shape of the spleen is like the subway in the rush hour of Marubeni. It has a thin coat outside.

Like the body fooling the body, its coat is the thinnest of all organs.

In this thin coat, the spleen tissue is full, just like a plump woman who has to bring a smaller underwear.

I don't know what the body thought at the beginning.

Under this structure, sometimes, let alone deliberate attack, an accident will break it.

In winter, the man pulled his slim girlfriend. As a result, his girlfriend fell in high heels and felt nothing. The woman didn't feel pain at that time.

Walking, half an hour later, the man patted the woman on the back and intimately said that the woman was a little fool.

Intimate slap, a little strength is useless, as a result, slapped his girlfriend in shock!

Scared people can be scared to death. This is because the spleen was broken at the moment of falling, but the clothes outside the spleen were not broken.

When there was more and more bleeding, the clothes couldn't hold on. Poof, the clothes were burst. Like massive bleeding, the blood pressure disappeared instantly.

Therefore, sometimes, such as being rubbed by a car or pushed by a motorcycle from the back.

Many people, careless, pat their ass and say it's okay!

Don't be careless at this time. It's better to go to the hospital for abdominal CT at this time.

Because once the spleen is damaged, it is really difficult to keep the spleen in the operating room.

It's not a top-level third class hospital. I don't dare to think about it.

"The blood pressure is rising! Zhang Yuan, the blood pressure is rising! " The anesthesiologist reported the patient's life state to Zhang Fan at the first time.

"Good! That flower, if there is still bleeding, can you guarantee to maintain the patient's current state? "

Zhang Fan slightly turned his head and asked the flower.

The flower listened, pondered a little, and then had an emergency meeting with several other

physicians.

"If the bleeding is not very fierce, it should be OK, but if there is another massive bleeding, the patient's medication threshold is almost at the peak, it is estimated that it will not be maintained."

The flower told Zhang Fan the results of their discussion.

Surgery, especially pay attention to preoperative discussion, such as simple appendix and gallbladder. In the morning meeting, routine surgery.

For other slightly larger operations, whether you are a doctor in the same group or not, as long as you are a doctor in the Department, you should express your opinions at the morning meeting.

However, emergency surgery is not good. For example, now, preserving or cutting the spleen is between Zhang Fan's thoughts.

Is splenectomy difficult? It's too simple. It was almost taken by surgeons more than a hundred years ago.

But what about protecting the spleen?

In terms of the current technology and medical level, the weaker third-class hospitals dare not mention it.

Don't ask, ask is cut.

It's not that doctors are irresponsible. When there is destructive damage to the spleen, cutting the spleen can save life.

But the spleen preservation operation was successful. The operation cost was not cut. The operation cost was high, and the risk was quite high. If it was not done well, the spleen was not saved, and even people could not be saved.

Therefore, the spleen is really a different organ in the human body.

Zhang Fan pondered. This was the first time during the operation.

"Zhang Yuan, if you can't, cut it. The blood transfusion has almost lost thousands of ml. it's too dangerous!"

As an old doctor, Lao Li knows Zhang Fan. He knows what Zhang Fan is hesitating about now.

"Director Zhao, how was their operation?"

Zhang Fan nodded slightly, but still unwilling to ask more.

"Their operation went well. The patient corrected the shock and repaired the blood vessels. Now it's almost over."

The head nurse in the operating room answered at the first time.

"OK, let director Zhao come!" Zhang Fan made up his mind. Since he has the ability, he must make the operation perfect.

Human organs are not leeks. If this thing is cut, it will never regenerate.

Now with conditions and a certain degree of confidence, Zhang Fan decided to do spleen preservation surgery.

Outside the operating room, the patient's family members cried into tears. The parents of the shop owner were holding the little girl and were out of breath.

In the roadway where the incident happened, the boss who bought dried fruit couldn't hold down his heartbeat.

On weekdays, he is a bully by virtue of his strong body, but now he can't hear the sound of metal hitting.

As long as there is a crisp metal impact sound, his urine will rush to his heart, and he can't hold it!

In the operating room, Lao Zhao also went to Zhang Fan's operating table. The director of general surgery is not for nothing. Although the operation is not as good as Zhang Fan, there is still life in his eyes.

Zhang Fan asked Lao Zhao to look at it, too.

"How's it going?"

Zhang Fan asked.

"Zhang Yuan, you can have a try. I'll give you a hand."

"OK! Second, who will help? "

"Zhang Yuan, I'll come!" Although Lao Li supports splenectomy, now the chief knife and director decide to protect the spleen, and he will go all out.

This is the hospital, this is the operating table. The assistant can have opinions or even reserve opinions.

However, when the master knife makes a decision, whether you object or not, you should go all out to

complete the master knife's order.

Therefore, a qualified surgeon is very valuable in the Department and even in the hospital.

Internal medicine can discuss around the patient and study medication slowly together, but surgery can't. In a short time, someone must stand up and take the responsibility for what to do and what to do.

Therefore, surgeons pay attention to one inheritance and one up and down, because their experience can be said to be practiced with one human life after another.

"OK, let's go! Spleen preservation begins. "

"Start!" Lao Zhao also bit his teeth and growled in a low voice.

Just like the cry before the charge, the low voice cry makes everyone concentrate.

The wounds of the spleen, like petals and stamens, were displayed in front of them. They started spleen preserving surgery.

The female boss of the eye shop also woke up slowly under the urging of the anesthesiologist.

Looking at the white wall above, her heart was full of regrets, and all kinds of regrets were mixed together.

Tears filled her eyes. Looking at the nurses around her, she didn't even have the courage to ask her husband.

She was afraid to ask, afraid to hear the bad news.

Really, what is hard to buy in this world is regret medicine.

Chapter 856

"Hang the thread with the small round needle, turn back and lengthen the thread. Secretary Ren and the vital signs of the patient will be handed over to you.

Dr. Chen, extend the anesthesia time!

Dr. Wang, please talk to the patient's family. We need to make two preparations.

Once the spleen preservation fails, splenectomy must be performed, and the risk of the operation must be explained to the patient's family members. "

"Good!"

"Yes!"

Ren Li agreed. After listening to Zhang Fan, Dr. Wang immediately agreed and left the operating room with a thick stack of surgical consent.

The instrument nurse hung the absorbable thread on the smallest round needle with considerable difficulty.

Needles, all kinds of leather needles, round needles, and special absorbable thread with needles, there are many kinds in medical treatment.

The round needle is actually the needle of your own sewn clothes. It is broken and bent into a full moon shape, just like a full moon machete.

The skin needle is as like as two peas, and the difference is on the needle.

The head of a round needle is sharp, while the head of a leather needle is like a triangular thorn.

Skin needles are used to sew skin and cartilage, and round needles are used to sew soft tissues and organs under the skin.

Because of the different needles, if the skin needle sutures the soft tissue under the skin, the result is that the tissue is split.

Although a small needle can be divided into three, six, nine, etc. in the hospital, for example, the round needle brought by the absorbable thread of a country is quite easy to use.

It is sharp, as if the material has its own smooth oil. When it is inserted into the tissue, it does not have a little dryness.

Moreover, the most awesome thing is that its material is used as a skin needle. It is easy to use. Skilled doctors can use it to penetrate flat bones, such as ribs.

But the price is also good-looking, one thread, one needle, more than 400! This is still the price of the hospital. If it's in a beauty salon, it costs thousands.

In order to prevent repeated use in the hospital, there is no threading hole at the end of the needle. It is a thorough disposable product.

To tell the truth, doctors like to use this foreign needle and thread if it's not the price.

It's estimated that small needles don't make money. Domestic manufacturers don't work hard. Then the domestic needles are really difficult to use.

Especially for doctors with slightly poor skills, if the slight force is not appropriate, the needle will be broken and bent first.

The nurse complained, the anesthesiologist urged, and the superior doctor criticized. Really, young doctors can bully and cry for needles.

Although Zhang Fan has no requirements for needles, he also likes to use them. They are not dry at all. When they are inserted, they are very smooth, just like wordy popsicles.

After receiving the needle, Zhang Fan looked up at the anesthesiologist. The anesthesiologist nodded to Zhang Fan gently, "Zhang hospital can start."

"Good!"

Abdominal tissue, including gastrointestinal, liver, pancreas, spleen and kidney. These abdominal organs have great autonomy, and they don't urinate much.

For example, intestinal peristalsis is managed by the intestine itself. If you eat too much, eat stimulating food, or tease with something from the back door, people will accelerate peristalsis.

But for other stimuli, they are also lazy. They don't give back to the brain what happened.

For example, if the intestinal tract is perforated, only after the intestinal fluid flows out will it make people roll around in pain.

What is intestinal fluid? This thing is strong alkali. Even so, the pain point of the abdomen is not very clear.

Abdominal organs are not very sensitive to temperature, cutting and acupuncture.

However, abdominal organs are the most sensitive to the pull force. This is why the second brother of

the grassland will * * when he sees any prey.

Once you bite the head of the cecum and look back, whether you are a two ton rhinoceros or a big male lion with sharp teeth, you can lie on the ground and cry for Dad in pain.

Therefore, when doing abdominal surgery, when the old doctor takes the little doctor, he will say, "slow down, slow down, move gently, don't pull!"

If the patient is pulled frequently, even if the patient has anesthesia, it will lead to agitation and even painful shock.

And when abdominal pain occurs, you must not take painkillers at home, such as ibuprofen and diclofenac sodium sustained-release tablets.

Never eat it. This thing doesn't pee your brain very much. Once you take painkillers, it will cover up your condition.

Looking at the anesthesiologist nodded, Zhang Fan stabilized his mood and calmed his mind.

"Start!"

Lao Zhao took tweezers in one hand, gently fixed the spleen in his hand in the other hand, and then showed the field of operation clearly to Zhang Fan.

Suture. In organs, the stomach is the best suture. It has three or four layers of structure, and the texture is tight, just like a pocket.

The spleen is the most difficult to sew. How can I say this? It's like a crisp water radish or a green apple rich in water.

You'll know the difficulty of this operation by stitching a green apple with a needle.

Once this thing splits, it is very difficult to serve. The angle of the needle is a little deviated. Let alone sew, it can give you a few more lobes.

Each needle is a gamble. You don't know if your needle will split the spleen tissue.

Moreover, when the seam becomes smaller and smaller, it is more difficult to sew, because the more it reaches the edge, the more likely it is to crack.

Just like a ceramic, this thing breaks not only at one point, but sometimes, due to the problem of torque, this thing can open the whole spleen.

Therefore, the older the doctor, the more afraid he is to get rid of the spleen, because if he is careless,

his previous efforts will be wasted.

However, for Zhang Fan, there is no problem with accuracy and stability.

Zhang Fan took a long breath and saw that the full moon needle was 90 degrees into the spleen wound.

On the edge of the spleen tissue with a wound like a flower petal, the needle holder in Zhang Fan's hand held a round needle and stabbed it firmly into the tissue.

When suturing cartilage or even penetrating flat bone or fascia, the force of wrist must be used.

This fragile tissue must use the power of fingers, not only have clean penetration, but also impartial stability.

Human body sewing is not sewing clothes. You can come any way with a needle in your hand.

For human body suture, the round needle is clamped by the needle holder, so the force is transmitted to the needle through the needle holder.

Just as you use pliers to hold nails and put them into wood, once you use improper force, the nails you hold are like a person who is not used to high heels and walks awkwardly.

If this happens after this time, don't think like it. The spleen can definitely become a spleen flower, so you can only cut it.

With the insertion of Zhang Fan with his breath closed, each insertion, Zhang Fan will insert with his breath at the most stable moment, and then seize the time to spread it out.

This thing doesn't use reckless force. Anyway, where is the spleen? I can't go in without my life.

Every insertion, not to mention Zhang Fan, is Zhao Quanping, director of general foreign studies, who is a help, involuntarily stopped breathing.

It seems that he is deeply afraid that his breathing will affect Zhang Fan's insertion.

One, two. The distance between the pins is as neat as measured with a ruler.

The profession of surgery is slightly the same as that of chefs. In the profession of chefs, men do the best, while men do the best in surgery.

Not tall, just this suture.

When Zhang Fan and his students had an operation class in college, the teacher anesthetized the students and tied the skinned rabbits to the operating table.

Then let the students practice stitching.

At that time, to tell the truth, we were all first brothers and first sisters. Who had done this job.

The result of stitching is that boys sew better than girls.

The spleen like a crisp apple slowly exudes a trace of blood with the stitches. Lao Zhao glances at Zhang Fan. He doesn't even dare to wipe blood.

Zhang Fan's sewing is not smooth and fast. Looking at the sweat on Zhang Fan's forehead, the itinerant nurse didn't dare to wipe it.

At this time, the wound on the spleen slowly closed and closed like a crying child's mouth.

For this kind of suture, stability is the foundation and speed is the key. There is a prime time saying in trauma medicine.

For example, the spleen is full of tissues constructed by various small bubbles. It can hold and eat, but there are few blood vessels.

Once it causes ischemia for a long time, even if it is sutured, it will also cause ischemic necrosis.

Zhang Fan sutured quickly. He was like a perspective eye. Every time the needle went down, he would avoid the blood vessels in the spleen.

There is only a light layer of superficial bleeding on the surface of the spleen, which is absolutely not like the emergence of blood flowers.

Doctors, although most doctors have the same education, they show different skills during surgery.

Some doctors, like slaughtering pigs, are full of blood in the operation field.

He rushed forward with his head down in the blood, cut an appendix, and then the patient had to have a blood transfusion of 400cc.

On the operating table, for such a poor doctor, the only resistance weapon for patients under anesthesia is bleeding.

Therefore, an excellent surgeon is not only good at hemostasis, but also good at avoiding bleeding in advance.

On the operating table, it can be said that 1g of bleeding needs 10g of treatment.

"Boost!" After Zhang Fan sewed the last stitch, his left hand gently released the curved forceps held out of the splenic door. This loosening is not complete.

But the mouth of the curved forceps has just left the blood vessel, but it can clamp the blood vessel again immediately if necessary.

The left hand is blessed, and the right hand is gently pressed on the wound sutured by the spleen.

This particularly fragile tissue sometimes leads to body contracture due to suture, and then the body will collapse after reperfusion.

Therefore, the suture of this kind of tissue is too wonderful. Sometimes after failure, even the doctor can't find out what's wrong.

Zhang Fan is confident in his own technology, but he can't guarantee it in case.

Therefore, before the blood does not fill the spleen, we must not be careless.

The main idea at this time is a human life.

Ren Li gave the medicine in person, and the booster medicine entered the medicine pot bit by bit. Slowly, the discolored spleen slowly began to turn darker and darker.

There was also significantly more bleeding at the stitches.

"What's the blood pressure?"

"High pressure 120 mmHg, low pressure 90 mmHg!"

Zhang Fan pressed on the upper hand of the spleen. At this time, he also began to feel the swelling of the spleen slightly.

Just like the cat's temptation, he licked it gently, then licked it deeply, and finally put his tongue directly on Zhang Fan's hand.

Swelling is inevitable, not to mention this kind of injury. Even if you slap someone, your face will swell, not to mention this kind of injury.

When the blood pressure rose to normal blood pressure and the spleen lay steadily, I heard Lao Zhao breathe a long sigh of relief.

"Come on, wipe the sweat for Zhang Yuan and wipe it for me. I'm almost thin!"

Can you not be nervous? Just like a time bomb, you can blow it up again at any time!

"Close the abdomen, go out and tell the patient's family that the patient's spleen is wrapped!"

As soon as the head nurse heard this, she quickly ran out first. The little doctors on one side haven't reflected it yet.

"Stop crying, all right, all right, wipe away your tears. The patient has been rescued and the spleen has been saved!"

Pulling down the mask, the head nurse with her face exposed stood at the door and told the family about the patient.

With that, the head nurse turned proudly into the operating room.

Her high head and erect chest seem so proud and charming. She likes this feeling and being surrounded by people's eyes of gratitude and worship.

Before the operation, the doctor told the patient that he was critically ill and might die on the operating table. The hearts of the family members were rolled by a road roller, and there was black fog in front of them.

During the operation, the doctor came out of the operation and told him that he might have to cut the spleen. Although it is necessary to cut off an organ, as long as people can be saved, their families are willing to do whatever they want.

When the patient's family members only had a little hope, that is, just rescue the person, the beautiful and plump nurse proudly told them that the person was alive.

Family members are really pulled from the abyss to the top of the peak. This sense of happiness is really particularly exciting.

The gray haired old man cried with his little granddaughter in his arms.

One month after the operation, I heard that the female owner of the hardware store sold the shop and gave the money to the female owner of the glasses store, and then got the understanding of the owner of the glasses store.

This is what Zhang Fan occasionally heard when the little nurses in the hospital gossip.

After the spring, the annual medical practitioner examination began to sign up again.

The technology of the hospital has been at the forefront of tea, but Ouyang still feels that it is not enough. It should not only be at the forefront of technology, but also in examinations.

Those Xueba who scored more than 500 in the exam, such as Naduo, Xu Xian and Xue Xiaoqiao, and the directors of various subjects were led by Ouyang to set up an exam counseling class.

Of course, Ouyang certainly didn't let Zhang Fan go. Zhang Fan is the main person in charge of the tutorial class.

Ouyang's current ruling philosophy is to fight with the government. She sends Lao Gao first. Lao Gao can't do it, and then she comes out.

Almost all the internal affairs of the hospital were on Zhang Fan and Ren Li's head.

Ren Li is hard-working. Zhang fan can't afford to be naughty now and then. Ouyang is becoming more and more thief.

As soon as Zhang Fan opened her mouth, she said that she had worked all her life, either low back pain or headache, or headache or upset. Now she can't even feed the cactus, so Zhang Fan must be considerate of her.

Zhang Fan has no way to say!

Anyway, just one word. If I don't work, you can do it yourself.

For the small doctors who took the exam for practicing doctors this year, although Zhang Fan gave them guidance, the bad news also frightened them.

Ouyang has said that doctors who have passed the examination of 500 will be given more bonuses and performance for half a year, while doctors who have passed the examination of less than 500 will be given more bonuses and performance for one month.

For doctors who fail in the first exam, they will stop paying all kinds of performance on the day when the results come out, and only 600 yuan per month will be given for living expenses. Those who fail in the second exam will be directly given the termination of the labor contract.

As soon as the red headed documents of the hospital came out, there was a howl. With the continuous improvement of the reputation of the Municipal People's Hospital, now I want to enter this unit. To tell the truth, some undergraduates spent a lot of thought. If they were dismissed because of the exam, really, how to live in the tea element medical circle and how to mix in the tea element medical circle.

On the day of the opening of the auxiliary class, the examinees who wanted to take the tea element examination in that year were not only from the Municipal People's Hospital, but also young doctors from other hospitals.

The deputy director of the medical office wanted to drive these doctors out of the hospital. Isn't it cheap for our hospital!

It was stopped by the director of the medical department. Chen Sheng knew Ouyang too well. Sure enough, when Ouyang found the strange doctor in the auditorium, the wrinkles on his face were smiling.

How famous the hospital is, isn't it relying on the support of peers, the envy and jealousy of peers!

If these doctors are really kicked out, Ouyang will definitely be angry.

Besides, if you can find some good seedlings in the study class, Ouyang is absolutely confident to dig people over. The old lady's abacus is very good.

Zhang Fan was the first teacher on the podium in the tutorial class.

When Zhang Fan boarded the podium, there was an instantaneous buzzing below.

Chapter 857

In the meeting hall of hundreds of people, the people who came to the class sat densely, all doctors who had just graduated for a year or two or three years.

The medical practitioner examination is the threshold, and many people are stopped!

Although they are in the hospital without a medical practitioner's certificate, to tell the truth, they can never touch and understand the roads in it.

They can only see a surface phenomenon at most. Because not only doctors do not accept them, but even nurses and drug dealers do not treat them as doctors.

"Which subject are you transferring to now? How's the teacher? Will you take care of your food? Does your Director give you a bonus? "

There are few frontier medical schools, so almost all of us are classmates. On weekdays, we either contact or do not contact. Now it has become a big gathering of students.

"Hey, I'm taking turns in the internal medicine department. The teacher wants me to take care of food for her. Where can I take care of food for me.

She is so mean that she is a strict student! Milk was brought home in boxes. Last time, I brazenly asked me to help carry two boxes.

I wonder if she can finish it! Why don't you give me a box!

Now there is no bonus in rotation. I can't even use skin care products now. Do you have a bonus? "

In fact, there is a saying in the medical industry that if you want to make money early, you can go to internal medicine. If you want to make a lot of money in the future, you can go to surgery.

What kind of milk and what kind of eight treasure porridge are actually visible things. Really, what they can't see is the big head of doctors.

Two little female doctors who have just graduated for a year are chatting. Neither of them is from the municipal hospital.

"Hehe, I'm in surgery. As long as I'm on duty, the teacher will either take me to eat a large plate of chicken or invite the patient's family to dinner. You see, I'm fat!

Our director is very good. Although the bonus is not paid, he still gives us a thousand hard work fees from the small treasury of the Department. "

"What? I'll go. Your teacher is so single. Your director is divorced! How do you look? He's not greedy for your body! Are you bald? How old is your father? "

"Annoying, my teacher is not married!"

"God, true or false, tell me!"

I really envy, envy and hate. This kind of doctor who can teach is definitely in a position in the Department.

If you really take down these material things, such as cars, houses, deposits, it can be said that you can struggle less or don't struggle directly. Although the chronology is slightly larger, it can be used reluctantly.

Then the voice dropped a lot, head to head together and whispered.

In fact, the medical industry is just like this. Just graduated is not as good as a dog. Some families with poor conditions are reluctant to eat even a ham sausage.

What is enough money for living expenses, eating, drinking, Lasa, human relations, integration and acceptance!

Only after getting the certificate, setting the Department and standing in the Department can you think about personal problems. Of course, the family has money, except for beautiful women.

For example, if many surgeons are not potential stocks and have not been won early, they can only wait for schoolgirls or new little nurses!

There was a lot of chattering in the meeting hall. Most of them complained about their low income, being on duty frequently, unreasonable patients, and being mean like landlords.

Anyway, a group of young people who haven't touched the threshold have been inexplicably disappointed in this industry.

Of course, some people are not disappointed in this industry. Such people are generally Xueba.

In the medical industry, when new doctors enter the Department, weighing is routine. Because we have to choose future colleagues.

A Xueba colleague can enter the role and state early, which will not only not drag others, but also help other doctors. Therefore, weighing is very common in medical treatment.

For example, in the daily ward round of internal medicine or the large ward round on Monday, the director or superior doctor will ask all kinds of questions for the new doctor to answer. You can answer or can't answer.

It seems that no one praises and criticizes, but people already have a small book in their heart. They classify you as working together or resolutely not.

Surgery is often in surgery. When the operation starts or ends, the teacher will suddenly ask you, "what blood vessel, what muscle and what bone is this!"

At this time, there is a clear distinction between learning bully and learning slag. Of course, the teacher's face is also different. Although he won't give Xueba an extra penny, he will definitely speak well. After all, he may be a colleague for a lifetime in the future.

For learning slag, those with a good temper will not be mean in language, but they will definitely be when you are like air.

If you encounter a mean life of teaching and learning slag, you really don't know whether it's

appropriate to put your hand anywhere.

After Zhang Fan got on the stage, the voice of the whispering people below not only did not weaken, but also developed towards the trend of expansion.

"Look, look, this is the legendary Zhang Fan. Oh, my God, how handsome! ~"

A female doctor in a secondary hospital said to the people around her.

In fact, Zhang Fan's facial features, if taken out for a separate comment, although they are not good-looking, they are not ugly.

The eyes are not big or small, the nose is not high or flat, and the mouth is not a super wind mouth.

But once put together, it is particularly ordinary. At first glance, people can't find a very obvious advantage.

However, Zhang Fan's slightly dark skin makes ordinary a little different.

Especially in a group of people who don't see the sun all day and wear white coats all year round.

Then, after Zhang Fan's reputation, status and technology, it seems that he is really a little so special and handsome.

If you throw away these conditions and walk in the street, the girl will never shout handsome. Maybe she will say that the black second brother is from the countryside!

People are so strange, really!

For ordinary people, Zhang Fan's current status may be a doctor. If he is a little familiar, he may say that Zhang Fan is also a vice president.

However, in government organs, especially those with higher official positions, it is clear that Zhang Fan is very powerful. As we all know, Zhang Fan is a force, and how much force is specific.

Others are hard to say. Marriage is like a gastrointestinal meeting, so those with higher official positions will indirectly or directly want to know Zhang Fan.

However, in these groups of non city hospital doctors who have just graduated and haven't touched the practice threshold and can't really be called doctors, Zhang Fan's fame is too big, just like an idol.

After all, I'm still young and haven't tasted the interests of the industry, so I haven't felt the slap in the face of the industry.

So on weekdays, if they talk about their business, distant big cities or legendary Throwing Knife experts, they don't know or understand.

But his own city, Zhang Fan, who is not a few years older than himself, is the topic of everyone's chat.

Similarly, after graduating from college, he became the executive director of the best local hospital in less than three years.

What's more inspirational is that the starting point of others is lower or the same as themselves. He came up step by step from the county hospital.

As an outsider, the development of tea without relatives is so powerful that even if we are not angry, we will unconsciously take Zhang Fan as our idol or goal.

It's understandable that who hasn't been young and who hasn't had a dream.

So when Zhang Fan got on the podium, even if there were no flowers in the eyes of the female doctors, they were also very eager.

Zhang Fan is like their classmate. Can't he copy his way?

Most male doctors have more or less disdain, but when they see Zhang Fan, there will always be some discontent in their hearts.

"It's nothing special. If I become the Dean, I'm probably better than him. I'm whiter and more handsome than him!"

Only the young doctors of the municipal hospital can really realize what people have to die and goods have to be thrown away.

In less than three years and two years, there were almost no surgeries that could not be done.

Even experts who are far away in the capital, in Qingniao and in the bird market can be pulled to establish a laboratory for tea.

Every critical operation in the hospital, no matter who it is, the first thought is Zhang Fan and president Zhang.

What is this existence? Listen to other people's efforts and eat and drink in the operating room for a few months. What abnormal existence is this.

Therefore, although the young doctors in other hospitals around them are excited or disdained one by one, only they, only they, with a pair of urban eyes, slant this group of former classmates!

They disdained to explain to this group of students, as if they were Zhang Fan's colleagues in the municipal hospital, and had drawn a dividing line with their former classmates.

"OK, class now! I'm Zhang Fan. Today I'd like to learn the key points of the surgical practice examination. I hope this study can help you! "

After Zhang Fan came on stage, he smiled gently. This smile was subconscious, just like breathing. It was difficult to quit.

Ouyang saw Zhang Fan's white tooth smile under the stage, and Bai Yanren rolled vigorously.

Because from the smile, she can see the shadow of Lao Gao on Zhang Fan, so the old lady is very unhappy!

"Wow, the sound is really magnetic!"

Hehe, if a person is a cow, everything is good. Really, subjective things are really not worth counting.

When Zhang Fan began to lecture, everyone slowly quieted down. A young doctor from the second municipal hospital took out a notebook nailed with waste medical records, took out a pen, and wrote on the notebook with the beginning of the second municipal hospital: Fundamentals of surgery, Mr. Zhang Fan!

The young man's name is Cheng Yongcun. He graduated from Frontier Medical University and studied solidly, but the conditions at home are not good. He really suffered when he was in school.

When others were young, he took steamed bread to fight hunger in the library. Because he had no money, he had a little low self-esteem, so he hardly participated in activities other than learning in school classes.

So after five years, he didn't have a place to go to graduate school. However, he didn't want to go to graduate school. After graduation, he hurried back to his hometown to make money.

Originally wanted to come to the city hospital, but now the city hospital is forced. Almost all the students want are postgraduates. Do undergraduates have any?

In fact, there are. However, according to the current situation of the municipal hospital, almost all undergraduates who can enter the hospital have the ability of eight immortals, so if they have no money and no way, they go to the secondary hospital, the Municipal Second Hospital.

Today, I heard that the municipal hospital wanted training. He didn't even eat. He came after work. Everyone tried hard and wanted to pass the exam, but Cheng Yongcun must pass through.

Because if you pass the exam, your salary will be high, you can have a bonus, you can set a department,

and you can get a rebate!

Now he wants to go to cardiology, surgery. Isn't he sweet? Fragrant, but money is more fragrant!

Five years of University, one year of internship, and more than half a year's achievements, seven years of junior high school, so he is really afraid of being poor. What future and ideal are false.

His shadow is almost the shadow of Chinese medical graduates. The difference is that who is richer and who has a stronger demand for money.

On the window not far from him, a girl wearing Nike white T-shirt and jeans frowned and gently opened the window around him. There were too many people. She felt that the smell was not very good.

The girl is a new doctor from the third municipal hospital. Her name is Chi Qiannan. When she was a student bully in Frontier Medical University, she was excellent and good at singing and dancing.

There is not a platoon or a class chasing her behind, but the girl is arrogant and doesn't like these hairy boys.

After graduation, I was assigned to pediatrics. The girl was very angry. I reported that I was outside the brain. Even if I couldn't outside the brain, ordinary foreigners can always do it. Now I'm assigned to pediatrics.

This is gender discrimination in the industry.

Therefore, in a rage, the girl gave up the research guarantee and looked down on the Frontier Medical College. She was ready to struggle for a year, and at least she had to test the golden mean of the capital.

So after returning to tea, without letting the family trust the relationship, they found a more humble Third Municipal Hospital and lurked down. Anyway, there are not many patients a day. One or two birds can just review the postgraduate entrance examination.

It is said that the people's Hospital of chasu city will hold a training class. Although she is not very confident about the practice examination, after all, there is a legendary surgeon here who listens to the gossip of doctors in the hospital every day, so she comes to have a look with curiosity.

When Zhang Fan came to the stage, she regretted a little. How can she see that this is a cow doctor? She is not old, shy, and not a little domineering of an operation expert. She is still black!

Disappointed, she wanted to leave, but there were too many people and it was inconvenient to get in and out. Therefore, the girl endured it and wanted to leave after class.

Zhang Fan began to give lectures. Zhang Fan majored in surgery. Licensed doctors mainly tested basic and clinical.

Therefore, Zhang Fan doesn't speak deeply, but often Zhang Fan will give you a more in-depth explanation with the actual medical records while talking about the foundation.

The originally boring foundation, in Zhang Fan with the actual medical records, became vivid at once, and it was easier for everyone to understand and remember.

Cheng Yongcun listened to Zhang Fan's lecture and enjoyed it more and more " I can still understand it like this. My God, Miss Zhang's ability is really not blown out by everyone! "

He is dead reading. When he listens to it fiercely, it seems that Zhang Fan has opened a door. Originally, it was thick accumulation. Now he is mentioned by Zhang Fan. He has thin hair and is opened.

Chi Qiannan on the side of the window was different. He shook the paper in his hand and slapped his mouth in front of the fan. "Talk about the foundation like an old lady, wordy and nagging!"

And more other general doctors listen very carefully at this time. They can't find the knowledge they didn't understand in the textbooks. It's the same for Zhang Fan to solve his doubts.

While giving lectures, Zhang Fan also asked questions. Ouyang explained that Ouyang never did business at a loss. Don't even think about free things. Won't your doctor take a break at this time?

It's almost time for this group of doctors to practice for one year. As long as they are admitted to the practicing doctor, they can work alone on duty.

There is a large talent gap in the municipal hospital, and it is still difficult to recruit postgraduates. In addition to some connections she can't stand, the old lady still wants to choose some excellent talents.

Now in class, the question is weighing. As long as she finds seedlings, she is ready to send someone to contact them privately. If she wants to work in the tea vegetable medical industry, Ouyang feels that none of these people can resist her olive branch.

Moreover, the benefits are obvious. Not only can we select talents, but also we don't have to pay a year's salary for nothing. The old lady is too clever.

Therefore, before class, Ouyang explained that she had to ask the following doctors again. She wanted to find Hetian jade in the gravel!

"Do you know why not all vitamins in the energy liquid can be input into the human body as body fluid?"

Zhang Fan's first lesson focuses on human rehydration.

Medicine is also wonderful. Many people think that rehydration should be a matter of internal medicine. Don't surgeons use knives?

In fact, rehydration is one of the basic skills of ordinary foreigners.

For example, if a patient doesn't eat for a day, he needs fasting water, how much liquid he needs to input, and how salt and sugar should be compatible, these are the most basic for ordinary foreigners.

A little high-end. For example, the patient has had bad stomachs and diarrhea for three days.

It's almost a dry adult. How to replenish fluids, how much to replenish, and how to balance acid-base need to be estimated.

Therefore, while Zhang Fan was speaking, he was interspersed with questions. Ouyang explained at that time that lectures should be in simple terms and questions should be asked step by step.

The old lady had a lot of things. Zhang Fan didn't prepare lessons, but there was no problem asking questions.

What he asked were used by everyone on weekdays, which can be said to be commonly known as the agreement, but few people think about why it is so agreed.

This is the difference between a craftsman and a scholar. If you want to be a craftsman doctor, you can be simple and skilled. There are several diseases in a department. If you are skilled, you can do whatever you want.

But if you want to be a doctor and scholar, you have to think with your head. Why is this.

When Zhang Fan asked questions, he smiled and looked at the doctor below.

The school dregs want to put their heads into the front bench legs. If their heads are low, they hope Zhang fan can't see them.

After all, I'm at work now. If I really want to be put up and hung here, how can I find someone in the future!

Learning in general, although I didn't hide with my head down, I was thinking hard on my face. Why is it? It doesn't seem to be said in the book.

Cheng Yongcun's brain is like a movie at this time, but after thinking for a long time, he still has no answer.

He knew it should not have been mentioned in the book, otherwise he would know.

Chi Qiannan tilted his mouth and whispered: Pediatrics. Then he kept flashing white paper, as if he could fan away the smell in front of his nose.

Looking at the look of everyone in the meeting, although Zhang Fan didn't say happy, he always felt cool.

"Oh, it's good to be a teacher!"

Condescending, he looked around and found that there was no desire to try. He was not ready to ask someone to answer. After all, it was not good to beat people down on the first question!

At this time, he saw a girl in a white T-shirt shaking a white paper fan as if she despised it. The red hook on her chest rose and fell with the swing of her hand.

Nike and Adie are particularly conspicuous among a group of people who just go to work. In small cities, this thing can be regarded as a luxury.

Hundreds of people come forward with thin clothes. Their monthly salary is only eight or nine hundred.

"Hey, I'm not afraid of bean bags as dry food!"

Zhang Fan is not angry. He is not so angry, but at least he can give you a lecture. You can't listen, but you can't be so blatant.

"Please ask a colleague with a fan to give you an answer. Let's learn together."

Zhang Fan's politeness sounds like ridicule, but he is really polite. There is no way. It is estimated that the shadow left in order to survive in the past can't be changed in a short time.

Chapter 858

"Because vitamins are divided into water-soluble and non-water-soluble, such as vitamin C and vitamin B6, commonly used vitamins are water-soluble!

Non water soluble can not be dissolved in liquid, of course, it can not be used for intravenous infusion to supplement patients! "

When Zhang Fan called the roll, Chi Qiannan didn't hesitate. He stood up and said the answer in standard Mandarin.

Other young doctors who didn't understand seemed to suddenly realize, oh! It was so easy for me to go. Why didn't I think of it.

In fact, this is the difference between reading and learning. The book mentions such a sentence, but people don't say how to use it.

For example, in daily life, the iodophor we use broke a little skin, so we quickly took out the iodophor and applied it a little.

In fact, the correct use of iodophor is called wiping. Wiping can take away bacteria, and smearing is useless!

Therefore, whether you have read the book thoroughly does not mean that you have broken several textbooks, but whether you understand the meaning inside. Can you draw inferences from one instance.

As soon as Zhang Fan heard this, he unconsciously looked at Ouyang. The old lady nodded at Zhang Fan, and then the old lady looked at the bright girl from the side.

"Well, it looks like Zhou Zheng, with a momentum of not admitting defeat!"

Ouyang nodded in his heart. He must have lost his temper and looked at Ouyang's triangular eyes.

"OK, please sit down. It seems that you are still very serious and solid in your study of pharmacology."

Zhang Fan smiled, then nodded, and then began to talk about his surgical foundation.

In the three-day tutorial class, the tea vegetable hospital dispatched all experts and Xueba.

For example, the old residence of the respiratory department, director jumabek, was stunned by a group of young doctors with a frontier accent of English.

If you don't understand, don't say it first. There's no stumbling in what people say. Even if it's nonsense, it's not so smooth.

Moreover, in the lecture of respiratory science, from the latest research findings and then combined with the foundation, it is called a thorough lecture.

Ren Li in her heart is even more powerful. Don't do it. She is an expert from the frontier senior official

hospital. She is capable with a trace of elegance of professors and scholars, and makes a group of young doctors admire and worship.

The young school bullies such as Naduo, Xu Xian and Xue Xiaoqiao reflect the strength of the reserve force of tea vegetable hospital.

Even Chi Qiannan, a school bully with eyes higher than the top, unconsciously began to take it seriously.

In clinic, medicine is divided into two parts: basic and operation. You know and will be two different things.

For example, in the simplest catheterization, you explained the steps clearly. As soon as you started, it broke. The painful faces of male patients gathered together into a rag, and the buttocks shrunk back. This is not enough. This is not treatment, it is called punishment!

During the on-site operation, Zhang Fan personally performed the surgical operation, from catheterization to wound suture. Zhang Fan demonstrated to these students what is a serious aseptic operation.

Zhang Fan's operation completely let the young doctors see the gap. Being able to say is not a skill, and being able to do is the foundation.

Chi Qiannan looked at Zhang Fan's technique and almost worshipped her. The girl worked hard here, not herself. Even if the teacher of the affiliated hospital compared with the black second brother, the gap was obvious and too professional.

After Zhang Fan demonstrated it once, he asked the young doctors who had performed well these days to operate it again.

After investigating the knowledge and skills, of course, we should also investigate the first-hand operation.

Among the young doctors in the non city hospital, Zhang Fan found several good seedlings.

In particular, Cheng Yongcun and Chi Qiannan are the best among these young doctors.

Cheng Yongcun is excellent in a stable and solid. Although he seems to lack confidence in answering questions and operation, as long as he gives a little affirmation, the young man is still very good.

In the clinic of grass-roots hospitals, he is the best doctor. Although he doesn't look smart, his perseverance is the best quality of a backbone doctor in a hospital.

Chi Qiannan is better than a aura. He draws inferences from one instance. He has his own ideas and can ask questions. As long as the girl can keep on and change the little princess's temper, he is the seedling

of a discipline leader.

After a few days of counseling, a group of young doctors from non municipal hospitals were both excited and depressed.

I am excited that I have learned a lot and the possibility of passing the exam has increased a lot.

Depressed, think about your own hospital, and then look at other people's hospital. I feel sad and want to tear my white coat.

At the end of the last day's counseling, Ouyang didn't have to speak. The director of the medical department personally took people to keep the contact information of some seedlings.

Ouyang's work has always been a wind and fire, and he is definitely not a muddle headed master.

After determining the candidates, they called directly. Confused, these seedlings were called to the conference room of the people's Hospital of chasu city.

"It won't be a training fee!"

One of the young men looked around at about a dozen young doctors and whispered to the people around him.

"Shit, I'm the biggest and best hospital of tea vegetarians. Do you care about your money? I see it's all those who studied better and practiced solidly in the past. It's estimated to be a good thing! "

The other thought it would be a good thing, but he was afraid to think about it.

At first, I wanted to enter the municipal hospital. To tell the truth, no one at home had no money. My education was just an undergraduate. Finally, I could only look and sigh.

The medical industry, especially the local medical industry, can be said to be almost local self breeding.

Because each province has its own medical school, you can't tell whether you study well from the files.

As long as you get your diploma and degree certificate, the rest is more comprehensive conditions, such as the thickness of colorful tickets.

In many schools, the transcripts before graduation are actually filled in by themselves. At first glance, they are all 90 points.

Therefore, in the undergraduate stage, the screening of the medical industry is actually the medical practitioner examination.

Look at the school brand, which can't be seen in ordinary cities. For example, in the frontier, almost all doctors come from the Frontier Medical University.

What three rivers and West China, the golden mean of the capital, will not come to small cities at all. Only in super large cities can we have the qualifications and conditions to choose schools first and then people!

We didn't wait much. It wasn't long. Ouyang appeared in the conference room with a smile.

"Sit down, please don't make yourself at home. Oh, look at your young face and think about your medical skills. I'm really happy.

You are all leaders. I can clearly tell you here that your hard work, your efforts and your hard work are not in vain.

When choosing a unit after graduation, you didn't enter Xinyi's unit because of various factors.

However, gold always shines, and an awl sharpens with grinding. Now, you have shown your sharpness.
"

With that, the old lady paused, and then her eyes slowly crossed from the faces of young doctors. She didn't pull any of them, and looked at everyone like encouragement.

Don't even think about it. Ouyang's encouragement and Ouyang's words directly made these young people warm-blooded.

People's blood can be stirred up even by old employees in the workplace. A few chicks are about to shed tears under the words of others.

Ouyang, like bole, was instantly worshipped by such young people.

Think about the beginning, because the comprehensive conditions can not be reached, we can only flinch at the gate of the municipal hospital, cursing the leaders of the municipal hospital in our heart.

But now, they all feel that their original mentality is not correct!

After reading it one by one, Ouyang still smiled and said, "after a year of internship, we are about to face the practice examination and enrollment examination.

The choice of hospital internship was actually a rehearsal, and the practice examination and enrollment examination were the real beginning.

I think everyone may want to enter the municipal hospital? "

Ouyang smiled and looked at everyone.

"Ha ha!"

"Hey, hey!"

"I think, after graduation, my first goal is the Municipal People's hospital."

Shy and embarrassed to smile, bold to speak out their ideas directly and look directly at Ouyang.

Seeing everyone eager or shy, Ouyang didn't care at all.

"Well, this is the newborn calf. Now I can tell you that the gate of the municipal hospital has always been open to you.

Take your files, take your diploma, take your degree certificate, come to the municipal hospital, and show your excellence in the examination room.

If you are a thousand mile horse, the people's Hospital of chasu city will not let you down. Today, you enter the hospital of chasu city. The hospital of chasu city is your pride. Tomorrow, the people's Hospital of chasu city will be proud of you.

Director Chen, next, you can arrange for us to let these doctors enter the Department for internship as soon as possible and recover the time delayed for one year as soon as possible. "

"OK, Dean." Chen Sheng looked at everyone and said with a smile, "I'm the director of the medical department of the hospital. In the future, you can come to me no matter what.

You can come to me when you are tired, you can come to me when you are unhappy, even if things at home can come to me. I am everyone's and logistics veteran! "

Ouyang gives you encouragement in the general direction and Chen Sheng gives you care in small details!

After a set of combined punches, these young doctors went crazy and went back to the original hospital faster than one.

In fact, I can't talk about resigning or not resigning. I haven't even a contract for a year's internship. To tell the truth, I have my own files in the hands of others.

An ordinary doctor from a family headed by Cheng Yongcun, he rarely took a taxi to his original unit. He was deeply afraid of an accident late.

Only Chi Qiannan was indifferent at the meeting. The girl is struggling. The operation of Zhang Fan and

the directors of the municipal hospital a few days ago, to tell the truth, moved the girl.

But if she went to the hospital, she would go to internal medicine and pediatrics. At the beginning, if she really wanted to go to internal medicine and pediatrics, she would be a graduate student in bird market.

But if you can learn the operation with Zhang Fan and the directors in this hospital, will you add some points when waiting for the graduate interview.

The girl hesitated, and Ouyang saw it in her eyes.

"What? Any doubts? " Ouyang is like a bosom grandmother. Her smile is too deceptive.

"Dean, I don't want to go to internal medicine or pediatrics. I want to go to surgery."

Chi Qiannan whispered that he didn't have the right and ability to be picky, so he didn't have enough confidence.

Ouyang heard, "internal medicine is the foundation. In fact, surgery has no technical content, and..."

Ouyang likes the girl's personality and is ready to combine with that flower after being pulled into cardiology.

So the old lady is going to start slandering surgery. Anyway, Ouyang's family comes from internal medicine.

"Dean, I was admitted to pediatrics by the affiliated hospital. I didn't like Pediatrics, so I gave up."

Ouyang's eyes lit up when he said this.

"OK, as long as you have perseverance, you still have a place on the surgical table of such a large tea vegetable people's hospital."

Wang Yanan and Zhu Yu were in the past, and Ouyang is not very opposed to female doctors going to surgery now.

Ouyang said that Chi Qiannan raised his head and his face was excited. He was still young.

"Go, get the files back and officially enter the surgical practice tomorrow. Then you can't cry because you're tired! "

"Ha ha, Dean, I will not!"

"OK, just have confidence. Go and go through the formalities quickly."

For a time, there was a small wave of resignation in several secondary hospitals.

Although there are not many people, there are only a dozen or so, but these ten or so have performed particularly well on weekdays. They study hard and have a solid foundation. They are all prepared to be pulled out by the secondary hospital of others to be on duty alone this year.

In fact, the old staff can see whether it is good for students to enter the unit at a glance.

Not to mention this technical unit, it is clear to everyone whether anyone can pass the medical practitioner examination in the first year.

Just opened one or two, and the hospital didn't pay attention to it. They loved to go, but the doctors who were taken to teach doctors all resigned. Even if they were guaranteed to prepare exams for radishes, people would have to go.

"What happened?" The president of the second municipal hospital and the former Secretary of the tea vegetable city hospital listened to the report from the director of the personnel department.

"I don't know! Are we paying a little less?" The head of the personnel section was confused.

"No, if the salary is too low, I've worked for a year. What would I have done earlier.

You missed the point! Several of them left together, and they were all top students.

No, go and find out if the municipal hospital has taken any action recently. "

Just think about it a little and you'll understand.

Before long, the director of the personnel department inquired about the results, "the municipal hospital conducted an examination and training. According to others, everyone went to the class."

"It's broken! Ouyang..." He said Ouyang and stopped. Ouyang was his nightmare. He didn't dare to slander him until now.

"Come on, go and hold the file in your hand. It's said that you can't leave until the internship period."

"It's all given!" The chief of the personnel section said wrongfully. He really didn't take these people seriously.

After all, the new doctors didn't even have a staff and couldn't leave. As a result, they left a few. As soon as they heard from the clinical department, they were all top students, so they were worried.

"Hey!" The former Secretary sighed, "all right, go out!" Then waved to the director of the personnel section!

He doesn't dare to slander Ouyang now, but he still has the courage to do things in private.

"Lao Yang, how many new students in your hospital have resigned."

As soon as they went out, he picked up the phone and called the president of the third hospital.

They are all in the same city. They can't breathe under the pressure of a woman. The two old men are also very uncomfortable.

"Hey, I've gone for six months, all of which are expected to pass this year. Tell me what it's called.

We have trained others for a year in vain. We have not only trained in vain, but also wasted a year's wages and salaries. "

Although the salary is not much, the president of the third hospital is still very angry.

If these students go to the bird market or other cities, it is estimated that they don't care at all, but they can't go to the people's Hospital of chasu city. It's hard to block their throat.

Is our hospital much worse than the municipal hospital?

"Who said no, all the reports were typed up, and they were taken away at once. We can't be slaughtered like dough. We should stand up! "

The former Secretary continued.

They are all human spirits, not a fool. The former Secretary wanted to incite, but people said directly.

"You are the chief officer and leader from a large hospital. In terms of level, you are higher than me, and you know their actions better.

As long as you take the lead, I will resolutely follow you! "

Isn't it just a complaint? Isn't it going to the superior to complain? They were dazzled. Small ideas came out one by one.

"Our two hospitals are still joint. We are all hospitals of the same level, and we don't say who leads who.

It's immoral to say that the unit is understaffed and that people who have been trained for one year say to go. "

The former secretary had three inches of lotus in his mouth. As a result, the other party was not stupid, and a breath of gas leaked out.

The leaders of the Municipal Health Bureau read and read the reports of the two hospitals, which can be said to be pleadings.

Municipal People's Hospital, he can't control it!

However, he was jealous of the position of the president of the municipal hospital for a long time, and now the opportunity came.

Before long, in the municipal government, the leaders in charge of health listened to the cries of the leaders of the health bureau and looked at the reports of the other two hospitals.

"Too much! It's too much. We must kill this unhealthy trend. "

"Yes!"

Chapter 859

In the medical industry, whether it is a big city or a small city, it is difficult for a hospital to take the lead.

Because the development of the hospital is in the same environment, the importance of a chief officer to a unit is very important.

Often, after the Dean has made achievements, the leader will be promoted. Even if he doesn't want to go, other deputies will push him to go. Therefore, it is difficult to ensure that the next leader can carry forward the past and forge ahead.

In the age of Lao Huang, with the strong wind of medical reform, the development of surgery was booming, and the establishment of talent echelon also took shape.

After Ouyang took office, wave after wave. Moreover, Ouyang's deputies, including Lao Gao, all hold a Buddhist attitude towards their official career. Therefore, under the condition that no one interferes internally and all helpers, it can be said that this situation has not been encountered in the tea vegetable area or even the whole frontier.

Therefore, when the tea element hospital develops, the more hot it is. Planes flying in the sky, 120 and surgical vehicles running on the ground, almost have the shadow of senior officials' hospitals. Even some aspects have surpassed the hospitals of senior officials.

Let's take a look at other people's laboratories combined with the affiliated hospitals of colleges and universities in the capital, and look at the copper plaque hanging at the door of the hospital. The bright big characters are better than the plaque of the tea government.

The tea vegetable government started from the frontier, while others directly hung the plaque starting from the capital. What is this? This is a proper political achievement.

Even if you become the president of the hospital at that time, you don't build buildings or engage in infrastructure construction, and you can have a round stomach waiting for the results of the experiment, so there are not one or two people with hot eyes in Ouyang's position in the Health Bureau.

"Leadership, if a unit does not change its chief officials for a long time, it will not say what breeds corruption. First of all, it is bad and unhealthy for the development of the unit and enterprise. There is no leadership rotation like the running water of the superior, which is out of government control.

Look at their city hospital. Now the leaders are not invited to the meeting. What is this? Doesn't she know that meetings without leaders are not serious? Is she still a cadre of our party?

I don't think so~ So the problem is very serious. Leaders should prevent it in advance, otherwise... "

The Secretary of the Health Bureau kept talking about the disadvantages to the leaders in charge of health, as if he had been so worried about the tea vegetable hospital that he couldn't sleep safely, as if he couldn't eat well and sleep well, and worried that the tea vegetable hospital would rebel every day.

The former Secretary of chasu and the president of the third hospital nodded their heads and gave full support.

"Hey, now the tea vegetable hospital is a little developing towards the trend of one speech, which is not conducive to the development of a natural science unit. Even if there are achievements, they are deformed and can't stand the test of time."

The Secretary of the health bureau wants to be the president of the hospital, and the presidents of several other hospitals also want to move.

The Secretary of the Health Bureau wanted to follow the east wind of the tea vegetable hospital and blow himself higher, while the presidents of the other two hospitals wanted to leave the hospital with

fewer and fewer patients early.

Whether the hospital is good or not depends on technology, treatment effect and people's reputation. In today's tea element, people have a little headache and go to the clinic or community hospital at the door of their home. If it is more serious, they go directly to the tea element people's Hospital, and several other hospitals are directly omitted.

Now, with the technology and reputation of tea vegetable hospital getting better and better, many diseases that needed to be treated in bird market can also be treated in local hospitals, so tea vegetable people's hospital is becoming more and more popular.

In the other two hospitals, including the traditional Chinese medicine hospital, fewer and fewer people see doctors. Although doctors don't care, they can be leaders, especially the president. This is to explain why no one in your hospital sees doctors, and tens of millions of equipment is wasted?

Therefore, these two hospitals are now pits, leading big pits. They all thought about how to jump out early. Municipal hospitals are not under the direct leadership of the Health Bureau, while secondary hospitals are under the leadership of the Health Bureau.

But Ouyang's position is a node. Ouyang doesn't move. A lot of people can't move.

Sometimes, people will say that if you want to mix in the circle, you can't offend the people in the circle too much.

That's right, but for Ouyang, the medical circle in the urban area of tea vegetable has long been directly abandoned by Ouyang, who has set up another circle centered on himself, which is where the cow is forced.

If you want to move Ouyang's position, the weight of the leader in charge of health is not enough. He can't be appointed or removed directly. He can only make suggestions. If you really want to move Ouyang, you must go to the gastrointestinal meeting.

To tell the truth, the leader in charge of health also wants to change Ouyang. It is not that he is jealous of Ouyang's position, but that Ouyang is too disobedient. Sometimes, it seems that he is Ouyang's subordinate, but Ouyang is his leader. He feels very uncomfortable.

Health, culture and education. Look at other people's culture and education. Therefore, the leader in charge of health thought about it, then bit his teeth, and finally went to the boss of tea vegetable with the report.

"Yes, the problem is still big. You need to move. " Boss Cha Su took time to look at the report and said to the leader in charge of health in front of him.

The leader in charge of Health said, "Hey, the boss agreed!"

As a result, the sweet taste hasn't been licked a few times. The boss said: "the Secretary of the Health Bureau hasn't managed in the specific responsible unit. In the end, he lacks information and is a little divorced from the actual work.

He has been in the position of the Health Bureau for several years. It's time to move. In this way, let him be the president of the second municipal people's hospital! "

"Well! What is the president of the second hospital? " The leader in charge of health thought it was wrong.

"Let the president of the second hospital be transferred to the Health Bureau as the director!"

Although it seems to be a flat tone for a dean to become the director of the Health Bureau, it actually means a slight demotion.

The hospital is a business unit, the president is the monitor, the health bureau is an administrative unit, and the secretary is the monitor. It can be said that he was demoted as soon as he went.

"Where is the Secretary of the health bureau?"

The leader in charge of health swallowed and spitted. His tongue was a little dry. He seemed to feel that his pace did not step on the same point with the boss. This was a big event. It didn't matter who came and who went. But if he couldn't keep up with the direction of the flag, the consequences would be bad. At this time, his sweat came out, not excited, but timid.

"Let president Ouyang serve concurrently! She can't just stare at her own nest and make her own life. The municipal hospital let her get up. Then give her some burden and pick up the tea hygiene system. What do you think! If we are talented people, we should use them boldly. We should not shrink from fear of wolves before and tigers after! "

The boss took the report and looked at the leader in charge of health in front of him. The leader's sweat brushed Lala. Why didn't he beat him again.

.....

Before long, after the gastrointestinal meeting, the red head document was issued to the major hospitals in the urban area. Ouyang took two challenges on one shoulder and became the boss of the Health Bureau. The chest regretted by the original Secretary of the Health Bureau was hammered into a pit by himself.

He had nowhere to cry.

The former Secretary of the tea vegetable hospital, holding a red headed document, tears came down

directly, "what's this called, what's this called!" After sitting in the position where he can count for a few days, he was made into an assistant official who didn't say anything, or the work under Ouyang's hand. His heart was painful. Ouyang's angry expression kept emerging in his mind and asked him not to speak. His legs trembled. He couldn't press it, but trembled.

If life can come back, he will never make a joint report. If life can come back, he must be the president and the people's stamp. He doesn't want to do it!

The new doctors have entered the Department and the rotation has begun.

Ouyang took the red headed document. Although his face seemed very calm, the corners of his mouth rose and had already betrayed the old lady's complacency.

He is also an official fan.

"Secretary Ren, president Zhang and President Gao, I will work in the Health Bureau on the 13th and 5th, and in the hospital on Tuesday, Thursday and Saturday morning. Alas, the leaders look up to me too much and the burden is too heavy. I'm still worried about how to carry out the work in the future. "

Although the tone seems to be worried, you can say how to listen and how to make people feel that Ouyang is showing off again!

Lao Gao heard it as if he hadn't heard it. As long as he didn't arrange work, Lao Gao would never say more. After hearing this, Ren Li pursed her mouth and smiled. She didn't know whether she smiled at Ouyang or politely.

Ouyang said that, seeing that everyone didn't speak, he was unhappy. He stared. Zhang Fan knew that it was broken. He didn't hold it!

"Where, according to the appointment, in fact, it should have been given to you earlier, not to mention the Secretary of the Health Bureau. According to your level, I think the leadership position of tea in charge of health is suitable for you!"

It is estimated that Zhang Fan held it late. Ouyang glanced at Zhang Fan reluctantly.

Zhang Fan smiled and said, "why didn't Chen Sheng from the medical department come? He knew he was lazy!" Zhang Fan admires and respects Ouyang to tell the truth, but he is really helpless to serve Ouyang.

After looking at Zhang Fan, Ouyang began to say, "I'll arrange the work. In terms of personnel, Zhang Fan, you and Secretary Ren will check. You two will discuss it. Secretary Ren will be the main in internal medicine and Secretary Zhang Fan in surgery. If there is a problem, I'll find you!" The Dean stopped calling, and Ouyang didn't like it.

Zhang Fan just wants to open his mouth. Ouyang's triangular eyes have stared up. Zhang fan can only shut up. It can't be entangled!

"In terms of finance, Zhang Fan, you are young. You should pay more attention to your work. Don't just focus on the operation. The operation needs to look at the overall situation. You lack experience in this field now. Managing the overall finance of the whole hospital can also expand your horizons and thinking."

In fact, the rights of a unit are finance and personnel. It is said that personnel belong to Zhang Fan and Ren Li. Finance should be given to others. Ouyang didn't do it. She would rather not let go than give Lao Gao hope.

"Dean, I won't do it!" Zhang Fan immediately objected. He was upset when he signed some surgical bidding. Now if he was allowed to manage finance, he would never do it.

When Zhang Fangang objected, Ouyang didn't get angry. As soon as the old lady's eyes turned, people understood that sometimes she couldn't blindly suppress it. She had to fool when it was time to fool, so she was ready to cheat.

Zhang Fan dared not let the old lady speak again, otherwise it would be too late to fix the tone with a hammer. He hurriedly said: "in the new year, after the trainees come back, I'm going to set up several more laboratories. I'm really busy. This time, I want to make the laboratory bigger. We take the lead and let the capital or the devil come to help.

You see, Secretary Ren has rich experience in leadership, and everyone in the hospital admires Secretary Ren. People are highly respected, so let Secretary Ren... "

Zhang Fan knew that Lao Gao and Ouyang could directly give the death order, so he threw Ren Li out.

Ren Li looked at Zhang Fan angrily.

"Dean, cardiology department, now..."

"All right, all right, I knew that no one could be trusted." After that, the old lady interrupted Ren Li, but did not mention it, and continued: "for the government, I can't do too much in the future, but we still can't relax.

This is a long-term, important and arduous task. The development of the hospital depends on whether the leaders pay attention to it, whether the leaders pay attention to it, or how our own leaders strive for it.

In this regard, President Gao has done very well. I hope President Gao can continue to maintain it. President Gao is also responsible for logistics. The trade union women's Federation has been disgraceful in recent years. President Gao should beat more. "

Lao Gao nodded like a monk who had joined Ding, with no joy or sorrow on his face. As if it had nothing to do with yourself.

Looking at Lao Gao's appearance, Ouyang seemed a little embarrassed. Then he said to Zhang Fan, "I'm not just the president of the hospital now. I won't be responsible for your bidding and equipment purchase in the future. Don't shirk it day by day. You also get the leader's salary!"

Ouyang turned around and began to target Zhang Fan.

Zhang Fan looked at Ouyang and decided to work. His eyes were full of admiration. This is a master!

After Chi Qiannan entered the surgery, he began to regret. He originally planned to review while learning technology. As a result, after entering the Department, there was no time for review. One operation after another, one after another. From morning till night, I dare not drink much water. I don't even drink the beauty milk I used to get up in the morning.

Although I also like surgery, I still have to review. I often work overtime for eight hours. I don't even have the strength to read when I get home. I wish I could let others take off my clothes.

But clinical knowledge is also growing rapidly. After all, the people's Hospital of chasu city is not comparable to the small third hospital.

Cheng Yongcun went to the internal medicine department. The young man held his breath and worked hard. He must stand here. He had no chance before and couldn't get in. Since he came in, he must stay.

In the hospital, with the slow development of tea vegetable city hospital, doctors have slowly divided into about two types.

A large number of doctors worked hard to improve themselves and refuel desperately, while other doctors began to refuel desperately in the way of money when they saw that they could not keep up.

There is a saying in the medical industry that if you can't learn technology, you have to make money. But what should I do when I can't study?

In fact, doctors are also people. They also have to live. They are not so noble. They are different only in the tense moment of rescue. On weekdays, they are actually a living person.

Cheng Yongcun entered the digestive department. His teaching teacher just felt that he couldn't keep up with the development of the hospital, so he focused on money.

There are more than 100 patients in the Department. He almost manages the bed himself, with more than 40 patients. For this doctor, it is really a nightmare for all transferred doctors.

He also worked overtime every day, and when he was on duty, he often wrote medical records one night without blinking.

The new doctor also had conflicts with him, and some new doctors went to the medical office. However, where are the titles of others. But Cheng Yongcun insists on biting his teeth.

The morning ward round is two hours, the change of doctor's order on the same day takes half an hour, the next doctor's order of the patient takes half an hour, the medical record of the new patient should be written, the course of the hospitalized patient should be recorded, and the medical record that has not been written before should be modified.

Not to mention eight hours a day, twelve hours is not enough. Many young doctors who followed the doctor were squeezed and cried, but Chen Yongcun didn't. He bit his teeth, red eyes and worked hard.

Teach not to sleep, he does not sleep, teach to sleep, he is still working. I taught him to compare with him alive.

One day, one week, half a month, his efforts and diligence were not only seen in the eyes of the director, but also satisfied with him.

"Xiao Cheng, I'm off the night shift tomorrow. Don't eat in the canteen! I'll take you to eat. Okay. "

"Here you are, Xiaocheng. Eat first and then write. I made you braised meat. I'm tired of working recently. You must eat well and don't get tired!"

Teach like an Iron Rooster. Don't tell the young doctor to take care of the meal. Even the director doesn't pee. But now, he can't be good to Cheng Yongcun. Although it's one thing to be afraid that Cheng Yongcun will fall and no one will work for him, it's also a kind of recognition.

Before Cheng Yongcun left the digestive department, the director of the digestive department typed up the report of applying for Cheng Yongcun to stay in the digestive department.

Chapter 860

Ouyang's appointment to the municipal hospital can't afford the waves and what to do. However, the other two hospitals are still traditional Chinese medicine hospitals, and the leadership hearts of these hospitals are hanging.

Ouyang is unreasonable. He has become famous, but he can't help it. He has strong ability and good luck. He has Ren Li in internal medicine and Zhang Fan in surgery, which is the envy of other presidents.

Even the president of the hospital of traditional Chinese medicine said that if there were such powerful

chief experts as Zhang Fan and Ren Li, he could develop the hospital of traditional Chinese medicine more powerful than the current municipal hospital.

Soon after the tea vegetable hospital accepted the rescue plane, a group of almost 30 people came to the Emirates as a group tour. Although they are all elderly women who don't work in the government, they can feel when they look at the red and jeweled faces. These people are either retired bosses or the rich wives of the bosses.

After these people came, without exception, they all visited the chief's son first, and then asked the hospital to arrange their physical examination.

Why can you organize a group to come to the tea vegetable hospital? In fact, it is a truth all over the world. You can think about it. There may be one or two on the riverside road or on some mountain in each city. There are expensive hotels that are still far away. Do people earn money from your people, no! But on weekends, millions of cars are full. The wonderful thing is that many people are willing to eat here and show off all over the world.

Why? This is the trend. What is the trend is actually the action brought by these people, which can be called the trend.

The sons of the emirate are all sick at the tea plant. It's amazing to hear that they were robbed from God or the lake. Rich people began to come to tea vegetable to see if they were ill. If they were ill, they would treat and keep healthy. Just like Liuwei Dihuang Pill on the table where the flag can be placed at a certain stage in China, does it work or not? Anyway, everyone is eating it.

Does tea vegetable hospital have any experience in receiving foreigners? Yes! It is said that the medical conditions in Northwest China are a little backward in China. For example, most students said that they can apply to any school in the college entrance examination, just don't go to New Zealand!

In fact, the truth is the same. If education and culture are not good, how can medical treatment be good. But northwest medical treatment is a sharp tail in China, but for the upper Stan brothers, northwest medical treatment is still awesome.

It will not cut the uterus if there is a tumor, nor amputate a leg if it is broken. The law can still be shot. So in the early years, the rich people of Stan often came to the bird market to see a doctor. Those who had more money went to maozi country, but maozi country was not successful. Some came to China and the other went to Europe.

The wealthier people usually go to the United States and meatball countries. Don't underestimate the meatball country. This guy is very interested in the countries around China. From Mongolia to stan countries, interest free loans are poured in every year. Good people do a great job. From medical treatment to education, they are good people in almost all industries to help others develop.

However, China is becoming more and more powerful. It is estimated that the money of meatball country is also meat steamed stuffed bun beating the dog.

The tea vegetable hospital has become more and more famous in recent years, so many rich people in Stan also began to slowly give up the bird market and choose tea vegetable not far away for medical treatment.

In the past, although all the people who could come here were rich, they were not proud, so they queued up when they should see a doctor and lay in extra beds when they should lie in the aisle. They had no complaints and were very happy to be treated.

But the regiment that came this time had to queue up and quit. It had to live in an ordinary ward and quit. Jijiwaiwai, jijiwai, very annoying. On the first day, after Zhang Fan led the team to contact, Zhang Fan didn't go.

"Report to the European Academy. We don't serve these people. There are so many problems!" Zhang Fan said a word to the director of the medical office and went to the operating room.

The price for Chinese people to treat their own diseases is one. In fact, the price for foreigners to treat their diseases will be a little higher, but Zhang Fan feels that they can't enjoy privileges just because they pay. Is he in a hurry.

Zhang Fan doesn't go and Ren Li doesn't go. Chen Sheng has no choice but to report to Ouyang. Ouyang immediately took Chen Sheng and Lao Gao to receive her. She was better in this regard and would not force Zhang Fan and Ren Li. The old lady knew people's hearts very well.

And Ouyang didn't show up for the first time. She just wanted to see if Zhang Fan or Ren Li could handle it! As a result, the old lady was disappointed. In the old lady's words, they were too upright, so upright that they were a bit like fools.

With a smile on his face, he looked at a group of haos, just like seeing red tickets. How could Ouyang let them slip away.

"It's all because the government didn't make it clear. It's a mistake in our government work, a mistake in our work!" Throw the pot to the government. Anyway, the government won't see a doctor. As for others, the old lady doesn't care.

The old lady has long prepared a group of professional translation nurses. Now the sheep are here. How can she not light the knife? And now Ouyang is in charge of the medical treatment in the tea vegetable area, and her rights are more comprehensive.

No need to ask for an interpreter. A group of haos were arranged in the special needs ward of the third hospital.

Now the group of haos are satisfied. Carpets, office rooms, reception rooms, independent internal and external TV, and if there is a wine bar, they have become star hotels. Moreover, the environment in the hospital is also good. There are green trees. Almost no other patients can be seen in the hospital except doctors and nurses. Everyone thinks that this is a hospital vacated by tea leaders for them. Suddenly, their pride overflows. This treatment and condition can match their identity!

In fact, the three hospitals are almost out of the pot. There are no patients. They are all supported by the government finance. No one has no patient. How can the environment be bad and how can it not be quiet! How can it look unclean!

"This is the hospital with the best environment. In order to create a satisfactory and rapid recovery hospital for everyone, we have spent a lot of effort on tea vegetarians.

Now I have arranged for you the best experts and scholars in China to diagnose and treat you. What you hold in your hands is the next diagnosis and treatment schedule. You can have a look. "

Ouyang's work is quite in place and meticulous. The arrangement in the morning is all the words of other people's country. The national flower, national bird and national animal of other people are painted on the big hard cover. The copper plate printing gives people a feeling of high-end and high-grade, and it can also make these people feel like they are home at once.

The satisfied heroes opened the agenda like a menu. It's really like a menu with a price list.

Outpatient expenses of surgeons at the national treasure level of China: specific negotiation, price to be determined!

Consultation fee for top surgeons in China: 10000 once

Consultation fee for top physicians in China: 10000 once,

Outpatient expenses of top surgical surgeons in Northwest China: 5000 once

Outpatient expenses of top physicians and Surgeons of tea element: three thousand one times, unit (RMB, note: the expenses of experts' transportation, board and lodging shall be borne by the patients themselves!)

.....

It's too meticulous, even to the point that even the bag (a) skin surgery is divided into three, five, nine, etc. It's almost obvious that he took out a knife to wipe his neck and robbed someone.

To tell you the truth, I really don't have the experience to face such a group of doctors. If you are in the capital or magic capital, this kind of thing can be solved by a foreign-related hospital. Maybe you don't understand it. In fact, you can see from the International Department of each hospital. Really, where the price is, it's like robbery.

But who is Ouyang? The old lady sharpened her teeth early. Isn't she afraid to scare these people away? In fact, even if Ouyang is not a psychologist, he has read countless people.

A group of Hao looked at the price list and nodded gently, "can you ensure that they are the top doctors in China? How are you sure? "

They are not fools. It's impossible to cheat money. Ouyang has long been ready.

"For national treasure level experts, it is still necessary to determine the time of Chinese experts and prepare in advance. However, you can rest assured that our experts will never be shoddy. First of all, national treasure level experts must be Chinese academicians.

I think you may also know the rarity of academicians in China. If you really need national treasure experts, please rest assured that we will invite them, and they are also the top experts in China, such as academicians Wu and Lu in China. They have a cooperative relationship with our hospital.

China's top doctors, first of all, are internationally famous, such as their papers, and they are still the chief professors of China's top hospitals. At least they must have the title of a River scholar. As we all know, in medical treatment, a River scholar's energy and professional level.

Therefore, please rest assured that in this regard, for the sake of the friendship between the two countries, we will do nothing but better!

For example, the patients in your country currently treated by our hospital have not used China's national treasure experts, and even the top experts have no use to alarm. They just sent the top doctors in the northwest to completely recover the patients. Therefore, you have confidence in us, and we will show all our sincerity to serve all leaders and distinguished guests. "

Ouyang has long thought of candidates. Although it's not easy to invite national treasure level ones, it's estimated that there is no need for the current level of tea. China's top experts, the senior brothers of Li Cunhou and Zhang Fan in the capital, can bluff each other.

In fact, the top experts in Northwest China are Zhang Fan, Ren Li and Zhao Jingjin of bird market. Ouyang sometimes hates iron and steel. Why doesn't Zhang Fan publish more papers and become famous

internationally!

As for the top experts in tea, a group of experts from the people's Hospital of tea have long been waiting in line.

Ouyang had already made up his mind and was waiting for the other party to stretch out his neck and get a knife.

Looking at the arrangement in hand and listening to Ouyang's kind and professional explanation, the Howes nodded at the same time.

In this world, there are really people who choose expensive ones instead of right ones.

Zhang Fan looked at the price list in his hand and his eyes were falling out“ European hospital, the outpatient service is 10000 at a time. Lao Li's worth is too strong. It depends on a slightly troublesome disease. If you run a few times, it won't be more than 100000! ”

Ouyang drank Chen shengpao's tea and half lay on her boss's chair. Looking at the surprised expressions of Zhang Fan and Ren Li, he hated iron and steel and pointed at them.

"Hey, I haven't seen the world. Why don't you use your head at all. If I were not afraid of shocking the world, I would like to change my unit to EUR. Who are these people?

I'm afraid of scaring people away. I'll tell you two that if the price is lower, I'm afraid of scaring people away.

Besides, aren't our experts valuable? I don't understand anything. Hey, why did we meet you two? ”

Ren Li smiled, "they go to Europe and America, and the price is estimated to be this price."

"Yes, but have you ever thought that European and American experts can see a doctor immediately when they go? No expert is worth much.

You don't move until you dial! Do you know what level of doctor they choose. Let me tell you, the top experts in Northwest China are all alike, that is, they don't have any serious diseases. They are supposed to come for maintenance. If they really have any diseases, hey hey!

OK, I won't attend the hospital affairs meeting later. You should explain to the directors and experts of each department, obey the instructions of the superior, and assign the personnel well. If you need to work overtime once you start, you must ensure that you are on call. Of course, the proportion of expense allocation has to wait for the approval of the superior.

Also, Zhang Yuan, you have time to contact several experts in the bird market. Don't say the price in too detail. Do you understand? ”

Zhang fanhan came down. Ouyang didn't do business. It's really a loss that it's all the mind.

In the three courtyards with birds singing and flowers smelling, a group of people were really stunned by Ouyang. Everything is particularly professional. There are three steps, one disinfectant, five heart defibrillators, and even the rescue bell everywhere.

These days, really, you can't scare people if you don't rely on some professional.
