

Chapter 861

Foreigners, whether they have big noses or blue eyes, are actually nothing strange in tea. In the frontier, the city has not ordered such a nation, so it will never be like a small city in the mainland. Seeing a foreigner can make everyone pay attention to it.

Although frontier people are not uncommon, there is something wrong with the health bureau and the government.

After the sanatorium was placed in the third hospital by Ouyang, the hospital's internal facilities, as well as the luxurious flow chart like the menu, and the tall nurses in brand-new white coats were photographed by interested people and reported to the government.

Ouyang was personally summoned to the government by the tea vegetable boss. When he came back, Ouyang was almost foaming in his mouth.

"Someone inside the health bureau must have done it!" Ouyang was lying on the boss's chair, and Chen Sheng guessed as he gave his idea.

In fact, after calling Ouyang, the tea vegetable boss didn't criticize Ouyang, because he saw hope and the hope that Ouyang could live in a hospital.

A hospital, a hospital established by the state, is very valuable even if it is small. Even if the equipment in it is not as powerful as that of the people's Hospital of chasu City, it is still tens of millions small. This is not the staffing.

After listening to Ouyang's explanation, boss Cha Su firmly stood on Ouyang's side, "you can rest assured and do it boldly. If something goes wrong, I'll be responsible." To say this to Ouyang is not only support, but also protection.

Because tea Su's experience in foreign affairs is too single. The old method used to be that if you dare to come to Laozi, you dare to fight, but now you can't. You should expect others to make money, but some people's ideas still haven't changed. They always feel that this is an opportunity to succeed Ouyang or a leader.

It's clearly on the border. Private businesses come and go, but the government is like a girl who can't marry. It's afraid that others will see its big feet.

Ouyang is not angry about the report. She is uncomfortable. The three courts are unable to expose the pot. No one can see it. When she wants to do something and try hard, she is not greeted together, but ignited in the rear.

The old lady may like Lao Gao a little at this time! There are too many complaints from former deputies in the municipal hospital, but they have been surprisingly harmonious since they set up a team with Lao Gao.

"Nothing, I'm just a little angry!" Her mouth was almost bubbling. She also said that she was a cooked duck.

Ouyang is just like this on his own chassis, which makes people feel as if the old lady is also very difficult. In fact, when he was in the Health Bureau in the morning, he was furious and cleaned up from top to bottom. Just like a chicken with a plague, Ouyang's female power murmured and trembled.

For Ouyang, in fact, the management of the health bureau is simpler than that of the hospital. If you are obedient, if you are not obedient, if you are not obedient, if you go to the countryside for three years, you can shout like your superior is your father!

"Do you say President Gao is willing to be a leader of the health bureau?" Ouyang seemed to talk to himself and to Chen Sheng.

However, as if he hadn't heard it, Chen Sheng lowered his head as if he were thinking about whether to eat noodles or noodles at night!

.....

The doctors and nurses of the third hospital became more and more energetic. They took off the white coat that had not been changed for many years, like a cook, and put on a brand-new white coat. No one was willing to be a salted fish.

Zhang Fan's phone, like the order of the alliance, turned up waves in major hospitals in bird city.

"Lao Chen, ha ha, what are you doing?"

"Hey, what else can you do? Go to and from work every day. What are you doing recently?"

"Me too, fooling around, have you heard?"

"I heard!"

Like underground party connections, the surgical directors of major hospitals in niaoshi play and listen to each other in private.

"Are you invited?"

"Well, Zhang Yuan said that my paper was very insightful, which inspired him a lot.

So this time, I must give some support in urology. You said I was too busy to touch the ground, but Zhang Yuan asked me to run at both ends.

Hi! But who let us have eye to eye with Zhang Yuan? I also know that Zhang Fan is difficult at the grass-roots level, so I have bought the plane ticket on Monday!

What about you? Have you been invited? "

"Oh, oh! I pushed it. I'm really too busy... "When I hung up, the director yelled," pretend to be your sister. How long do you have? I don't know? Inspire a fart. "

The two directors of urology department called. Those invited seemed to be recognized by their superiors. They wanted everyone to call and ask. Those who were not invited were holding the phone and cursing Zhang Fan all the time.

"What's wrong with me? What's wrong with me? Why not invite me? Why not invite me! This Zhang Fan has no water in his eyes. He can't even see me. I'm such a good director... "

Suddenly the phone rang in my hand. I saw the place I belonged to, tea! The director who was just cursing picked up the phone with great enthusiasm!

"Director Yang, Hello, I'm tea vegetable Zhang Fan!"

"Oh, Zhang Yuan, ha ha, Zhang Yuan, Hello, Hello!"

The heart hanging in the air finally landed, "I'm still famous! Can still be liked by Zhang Fan. "

Zhang Fan's name has become a myth in the high-end hospital circle of bird city. With a push of the forehand, Zhao Jingjin has established a position as the boss in the general outside of bird city. With a push of the backhand, Lao Zhao and Xu Guangwei have become presidents.

What power is this? What grade is this? So when Zhang Fan's invitation call began, the bird market medical circle all stood still like time, waiting for Zhang Fan's call quietly.

The surface is as calm as water, but under the water, the waves are rough!

This is energy.

If Zhang Fan is familiar with the person and has a telephone, he will inform him earlier. If he is not familiar with the person, Zhang Fan still hears the phone through others. For a time, air tickets from bird market to tea vegetable have become popular routes.

A plane is full of famous medical experts in the bird market!

.....

The experts in the bird market are invited by a person who is also No. 1. Those who are not invited seem not to care much. In fact, they are all nervous. What money is not money? Am I a person who cares about money? I care about your face!

The doctors and nurses of the third tea plant hospital work hard to seize the opportunity to get out of the state of salted fish.

In the tea vegetable people's Hospital, you are proud. For example, Xiao Chen of the medical department who went to the Health Bureau for a meeting. In the past, Ouyang Zhang Fan bullied people. The Health Bureau didn't dare to find Ouyang and Zhang Fan, but you can be a little officer.

But not now. When Xiao Chen went to the Health Bureau, several deputy directors would praise the little girl with high chest and head. Look, this girl is really energetic! Thanks to the soldiers brought out by Secretary Ou!

Chapter 862

On Monday, after Zhang Fan presided over the hospital affairs meeting, he went to the airport with Chen Sheng of the medical department and several of the largest 120 vehicles of the hospital.

The experts in the bird market were too proud. As long as they were invited, one of them arrived at the tea plant by the first plane on Monday morning.

People give face, Zhang Fan also needs to understand friendship, so he goes to the airport to meet people in person.

The experts of the first flight, the air sister-in-law and air uncle on the tea vegetable small plane were wondering!

In a small place, a small city, the director of the medical department of the largest hospital still had some face. 120 drove directly into the apron. Moreover, the airport is also very enthusiastic and interesting. It not only let 120 into the apron, but also specially made a red carpet! Anyway, it's all from the medical industry, not the government, and there's nothing to worry about.

The cabin door was opened. The experts looked at this posture and Zhang Fan standing in the distance. They were red one by one. They had too much face.

In fact, it's really hard to say whether these people, who have reached this position, can be moved at a time.

However, we are very satisfied with the such pomp and face.

"Ha ha! Zhang Yuan, how can you pick up the plane yourself? Yes, yes! We'll be proud of you! ha-ha! Isn't it? "

"Ha ha, yes, yes. How can Zhang Yuan be so polite? I'll see you outside, I'll see you outside. "

Familiar with unfamiliar, this time, all familiar with Zhang Fan.

"Yes, yes, you are all my predecessors. Zhang Fan supports my work so much this time. For example, there should be some etiquette. Zhang Fan keeps the friendship of experts and predecessors in mind!"

Zhang Fan held their hands one by one. Chen Sheng introduced them and let everyone get on the bus. Although the car was 120, no one cared. As long as Zhang Fan came by himself, they were satisfied.

If these people are invited by the tea government, if there is no order from the bird city government, they may not be 100% in place. Therefore, Ouyang is still powerful!

The outpatient physical examination of the third hospital has begun, and the tea vegetable side is also doing well. One expert is equipped with four young doctors. Immediately set off the experts, not to mention the level, the posture has been set up first, which makes some proud inheritance heroes become very polite for a time.

Rows of outpatient doors were opened, with bilingual signs hanging on them. What subjects and experts

were clearly written.

Bilingual nurses are accompanied by one person in the whole process, the service is in place, and the action standard is the same as that all have undergone etiquette training. The atmosphere was set off all at once, which made the haos start to show their etiquette. We are aristocrats, and we can't let the little girls in China compare with each other!

As the youngest expert, Zhang Fan is equipped with several young doctors, including Chi Qiannan.

Recently, the girl has really understood what is medical treatment, what is a doctor and what is a surgeon. She works in general surgery. What department is general surgery? It can almost be said to be the department dealing with water.

In the elderly with intestinal obstruction, the feces have been fermented for many days. When the abdominal cavity is opened and the feces are taken out bit by bit, the girl tears and hiccups. Take it out, hiccup, take it out. If she can't stop, a pile of tears will flow. When eating, as long as the color is a little closer to the food, you will vomit when you see it, and you can't help it.

It's not that the girl wants to cry, nor does she want to shrink back, but it's too smelly and disgusting. But the stench of the stool in her hand didn't make the girl shrink back at all. Looking at the patients who are dying and rolling all over the ground, because after the operation, she walked out of the hospital healthily, but made the girl more determined to be a general foreigner.

In fact, medical treatment is like this. If one day, all doctors and nurses engaged in medical treatment choose this industry because of their interests and hobbies, maybe that's the time when medicine really takes off.

"Zhang Yuan, liver and gallbladder reconstruction, has our hospital done it?" Chi Qiannan took the time to ask Zhang Fan before Hao entered the physical examination. On weekdays, the little doctor didn't have a chance to chat with Zhang Yuan.

Zhang Fan is either in surgery or outpatient service. Now he has to preside over the hospital affairs. Sometimes he has to go to the laboratory. To tell the truth, Zhang Fan is getting busier and busier now.

"No!" Zhang Fan took the recent report of the laboratory and was busy looking at it. He said without looking up.

Chi Qiannan was still a little lost when he heard it. "Hey, it's still a small frontier hospital after all. It's a pity!"

As a result, Zhang Fan said, "I've had several operations at that time. How are you interested?"

"Well!" Chi Qian's male teeth are broken. I wish I could slap Zhang Fan on the back of his head.

One after another, Hao began to enter the physical examination room of each department one by one.

There is a difference between the local tyrants of Stan countries and this kind of inherited tyrants of several generations. The characteristic of local tyrants is that as long as they are not blind, they know that they have money at a glance.

Stretch your arm is a gold watch, lift your neck is a big gold chain, and open your mouth is a big gold tooth that shakes people's eyes. Almost all his words were open voices. He pursed his lips just to show everyone his golden teeth.

People all over the world often say that Chinese aunt loves gold. In fact, they have wronged others' Chinese aunt.

Those who really love gold are the local tyrants' uncles and aunts in Stan countries. Some love to the extreme and would rather have their good teeth pulled out. They have to get a mouthful of golden local tyrants' gold.

This kind of inheritance is often a mouth of white teeth like a white robe.

Moreover, inadvertently, he stretched out his finger, either with a huge diamond on his finger or a glass like gem in his neck. People don't deliberately show off. They often let you see it inadvertently and let you understand that this person is so rich. Generally speaking, he likes to pretend to be dark.

These people are very good at everything. They understand etiquette, reason and wave earth like gold. The smell is a little unbearable for doctors and nurses. The flavor of spices is too heavy, just like the roasted whole sheep pickled by Uncle Uyгур. The taste of these Hao is particularly unacceptable.

The smell of perfume, the smell of the body, and the smell accumulated over the years, when the robe was lifted, really made the doctor of China hardcore.

.....

Inheriting Hao's physical examination of tea vegetable was quite smooth. At the beginning, the government stood still and seemed a little ashamed to rush.

But when the money on the first day got into the bank, it was wonderful. The tea vegetable Finance Bureau and the bank directly sent a working group to the third tea vegetable hospital. Even the police want to send some security personnel at the edge of the ball!

Is everyone so enthusiastic? Do you all want to make some heat and contribute some power to the resurrection of the third tea and vegetable hospital? Pull, it's the power of RMB!

Moreover, because of the arrival of experts, inheritors were more or less found some diseases.

"Well, your prosthesis has been placed for too long. Now it has begun to appear inflammation. If it is not removed in time, it may become cancerous." The female director of the double gland department was noble in front of her, and the lady with her face and head explained her condition.

People are also under great pressure. In the early years, in order to suppress a group of goblins, they had to stand up.

But now, when holding the molybdenum target result report and listening to the professional and rigorous expert's explanation in front of me, the lady is flustered. Now the child has grown up and her husband is old, so she is not afraid of goblins.

Now everything is to enjoy the fruits of the victory of the positional war. There must be no accidents in the body. Therefore, the lady ordered a luxury package without thinking about it.

"Let your top Chinese doctors operate on me!"

"OK, please rest assured that we will take your silicone completely without any leftover, and choose the best surgical path to reduce the occurrence of scars. Now please go through the hospitalization formalities. "

Perennial high oil and high-fat diet, bad gallbladder, gastrointestinal polyps, alcoholism caused by drinking all year round, often Gong Dousheng sulky and smiling face, leading to bad thyroid, one drag three acrobatics, leading to enlarged prostate, love to go through the back door and take off the anus.

Although there are five or six people on weekdays, they are wearing specially customized robes, with either baidalifei or limited edition jiangshidanton, driving a sports car or riding a white camel.

But take off your clothes, and the marks of wave (a) swing on your body are still obviously left.

The elderly and women are mainly here this time, and the richer and older people are, the more worried they are about dying. Therefore, when the underlying diseases are detected, they are more and more willing to spend money.

It's a pity for Ouyang that none of her customized bag (a) skin surgery was selected. Ouyang looked puzzled. Don't old men care about secondary development? After reading other people's customized medical treatment, Ouyang reacted that they had circumcision when they were young~

Ouyang completely let go of the work of the hospital. She just inherited Hao's reception and the work of the corresponding government. As for the hospital, she didn't ask. After giving it to Zhang Fan, she didn't even answer Zhang Fan's phone.

Zhang Fan let Lao Gao take the lead. Lao Gao quit and said to Zhang Fan privately, "you should understand the good intentions of the European Academy!" The old man didn't do it himself and didn't want Ren Li to take the lead.

Really, where there are people, there are rivers and lakes. It's all right. In fact, Ren Li doesn't want to be the head. She's not an ambitious woman in her official career.

Therefore, Zhang fan can only become the boss who is not the boss if he is not happy! It's really wonderful. None of the three people want to be the boss!

Almost all the operations were carried out by an expert with doctors from three tea vegetable hospitals or the third municipal hospital. For a time, the traditional Chinese medicine hospital and the second hospital were extremely hot, and the presidents of the two hospitals surrounded Ouyang every day! Where did they still look like they were killing each other? They are like boys chasing girls. Where are Ouyang going, where are they going! And I don't care about Ouyang's cold words at all. They are all warm and sincere smiling faces.

Chapter 863

In fact, the operations of chuanghao are not major operations. If they are difficult, they don't need to be treated. A group of senior inpatients can be pulled out.

However, why do people come to China and choose expensive ones? Don't they feel that they should enjoy treatment that ordinary people can't enjoy, or that their diseases need a higher level of care.

This is the same reason that everyone likes to go to the third class hospital and hang an expert number. In fact, if there is any serious disease, you can hang a general outpatient service. If the doctor can't see it, you don't need to hang an expert number. If others can't get it right, they will find an expert to consult you.

However, people are almost the same when they get sick and go to hospital blindly. They don't have much money. Their diseases are not serious diseases, but they pay special attention to them because they have more money.

For example, gastrointestinal polyps, many people do not understand what polyps are, in fact, vegetations of human tissue.

For example, in the past, maybe grandma and Grandpa would warn children not to play with the rain. There would be monkeys on the sailor!

In fact, this thing is not a polyp. Real polyps are more common. For example, people get married or think they are adults. Well, they crackle. As a result, they soon find a small pink meat hammer in their arms, back, chin or near their armpits.

Say it's long, it's not long. The pink always makes people have a desire to pull it down. Although it looks small and tender, it still hurts when pulled.

This is actually caused by a non pathogenic virus transmitted by men and women. This virus has little problem for men, but it will cause a certain possibility of uterine cancer for women.

There are vegetations on the skin, as well as other human organs, such as gallbladder polyps, intestinal polyps and rare vocal cord polyps.

These polyps are not simply transmitted by a non pathogenic virus. If every organ has the possibility of canceration, the cancerous degeneration of the polyp in the abdominal cavity is quite high.

What are the reasons? There are many reasons. According to textbooks, it is very complicated to tell from genes, then from the living environment, people's character and temper.

In fact, there are three more and more common reasons, one is dietary stimulation, the other is mechanical stimulation, and the third is inflammatory stimulation.

Many people, especially fat people, like to eat fat meat. The fat meat on the pig's elbow swings and swings. They dip some chili oil and vinegar, pull out the fat oil and soup, Chi slip, and suck it in. They don't have to chew. They see the throat, grunt, and go all into their belly. Then look at the fat man, his mouth, and satisfy their appetites.

In fact, this thing is food stimulation. The digestion of the human body is mainly in the intestine, but fat is not. After fat enters the digestive tract, it is first digested with bile, that is, granulated, and then inhaled into the blood by the intestine, and then into the liver, which can be digested and transformed into energy.

But when you eat too much, it doesn't have time to transmit chyle in the intestine. It starts to tease the intestinal mucosa. Come on, uncle, come on, play, come on.

The intestinal mucosa was stimulated, and suddenly a meat strip appeared from the cilia with a man's flat hair style.

This thing is the polyp of the intestinal tract. Although this polyp looks like a meat strip seduced, it has no power.

In fact, everyone is wrong.

For example, many people don't have to wait until the next day to have a hot pot, a drink, or some delicious food. That night, they go to the bathroom and the bathroom.

The soft toilet paper rubs the anus (a) door red and swollen, and the legs can't be closed happily. The chrysanthemum is hot. I hate not to lick it with my cold tongue and bend my head like a little cat or dog.

This is not eating any unclean food. In this case, there is a high probability that there are meat strips in the intestine, that is, the so-called intestinal polyps.

This thing usually goes with the flow of the intestinal tract. What the cilia on the intestinal mucosa do, it also pretends to do.

But once stimulated, it is red and swollen, just like a fat man who is drunk and crazy. It constantly stimulates the surrounding slender intestinal cilia and mucosal tissue.

The intestines are very uncomfortable to be disturbed, and then they vent their anger, making you greedy, making you greedy. Then, greedy people are either bloody stool, diarrhea, diarrhea or constipation.

Anyway, the mouth is comfortable, but the stomach, intestines and anal (a) door suffer.

If it's just this simple symptom, it's actually a day or two. Just bear it and it's over.

However, we must not underestimate it. If this thing goes to the hospital for treatment, if it is in the third-class Hospital of senior officials, this small meat strip is usually in the digestive oncology department.

Because it's too cancerous.

In addition to food stimulation, there is also mechanical stimulation. It's hard to understand. The old driver probably thought of what to take the Valley Road. In fact, this is only one of them.

For ordinary people, it's actually eating food rich in parasites. Insects crawl around the intestinal wall, which is also a stimulus. The intestinal tract will blow, and a Super Saiyan can be turned into a cilia.

Inflammatory stimulation, the easiest to understand, is that bacteria cause intestinal infection.

This kind of polyp is often not a single one, just like a long grass flat, suddenly there are several dog tail flowers, swinging with the wind. It's uncomfortable to look at. I want to pull it out.

The fat man took off his robe, revealed his white and upturned hip (a), opened the chrysanthemum and waited for the doctor's treatment.

This treatment is not the same as treating ordinary people. On the one hand, doctors should think about how to cure patients, on the other hand, doctors should also think about how to not exceed the red line of medical insurance, and on the other hand, they should also think about how to earn a little.

For this treatment, patients choose expensive, not appropriate. Ouyang is also welcome. You can use whatever you want. The doctors are happy at last.

The lubricants commonly used in medical treatment are either paraffin oil or glycerin. They are often installed in glass bottles or plastic bottles with large heads. Doctors suck as much as they use with needles.

But this time, Ouyang didn't know which catheterization bag he learned from. One for each person. Even paraffin oil was packed in a luxurious hard plastic box, wrapped layer by layer like a gift.

.....

Although each inheritor is equipped with a simultaneous interpreter, the little girls have little experience when they take up their posts for the first time. It is estimated that they are excited and want to show more. As a result, the translation seems to be a little cumbersome, and the simultaneous translation is a little delayed.

It is estimated that the little girls give full play to themselves and use non professional language to comfort the heirs who show white living buttocks (a).

"Relax, come on, relax, inhale, inhale deeply, spit, exhale, and then open the sphincter just like defecation!"

After all, she was not a professional medical translator. When the little girl was still thinking about what the sphincter said, the doctor thought her translation was over, and then patted the white fart (a) stock and stuffed it in.

"Well, oh!" When the enteroscope went in, the traditional Hao screamed like a wolf howl or a long tune. The tone of pain, stimulation and excitement was slightly excited, including the cry.

If we use the words of the common people, this man is also hard to use his head. When he is full, isn't she good, beautiful girl? Isn't she gentle? He has to accept the inhuman Valley Road! I don't know what to think.

The enteroscope finally entered the intestines, but with the doctor's activities, the man bit his teeth like pain, not like pain, not like cool, so he had to moan once or twice.

The doctor and the little nurse who is translating stand up. Who is this? Is it painful or cool! The doctors are so nervous that their hands are shaking. It's amazing.

Under enteroscopy, the polyps in the patient's intestines, like a greasy meat worm, hang on the intestinal wall. With the peristalsis of the intestines, the meat worm swings and swings, pulling the silk thread to drop the mucus on the body, ticking and ticking.

Fortunately, there are few polyps. If there are many polyps, it really can't be seen. Not to mention ordinary people, even non digestive doctors can spit out when they see this scene.

Think about it. It's like a piece of red and fresh pink meat hanging up. I could have thought of a pot of braised meat. As a result, I came forward and took a closer look. Darling, dozens of white and greasy meat insects squirmed on the meat. While spitting sticky saliva, the meat insects looked like they were going to fall down, which made people diaphragm.

Really, this polyp is like an upside down meat insect eating more intestinal contents, spitting out last night's overnight food. The front end of meat, just like the head of an insect, is stimulated red and swollen, and then spits out white and greasy intestinal solution one by one. Really, on the enlarged display screen, how to look at it and how uncomfortable it is.

If polyps are found to have lesions, they must be removed for pathological examination. If they are relatively small, their activity is acceptable, and there are no inflammatory plaques and decay around them, they can be directly pointed with laser or high-frequency current under the electron microscope.

Under the electric knife, the polyp is like a bumpy fat on the mutton string, which is burned into a black bumpy under the high temperature. The doctor then used the pliers under the electron microscope to gently crush the coke pimples and the black powder fell.

The doctor then withdrew slowly.

For ordinary people or people without special hobbies, enteroscopy treatment, to tell the truth, is punishment, swelling, pain, spasmodic pain caused by intestinal traction, wave after wave of convulsive pain, and swelling in and out.

To tell you the truth, it's really hard! But for this, looking at the exit enteroscope and seeing that it can be played in real time on the side, I was curious and asked the nurse, "how much is this thing!"

Chapter 864

Zhang Fan was not let go by Ouyang. Zhang Fan's operation was the removal of foreign bodies from the chest. To say human words is to take silica gel.

Chinese thieves are not thieves. Thieves are very. For example, when they are placed, they don't come to the hospital, but to the beauty salon. Why not come to the hospital is because the beauty salon speaks well and the price is expensive, which makes people feel that people's materials are nano high technology, which is comparable to the technology of landing on Mars.

To tell you the truth, it's all deceptive. What natural silica gel? Is silica gel natural? Polymers and invariants are all nonsense, changing concepts! There are temptations, such as standing permanently in your chest, holding up the hope of tomorrow and attracting the eyes of males. In fact, they are all fooling people.

Before the hospital, the serious chest bulge operation was not allowed to place silica gel. In the early years, it was scolded by an old Chinese surgeon.

But there's no way. The old man's voice is louder than capital. No one wants to listen. Seriously, in hospitals, for example, chest tissue collapse of various causes is actually filled with autologous fat. For example, if the chest collapses, the doctor should fill it up and transplant the thick fat in the abdomen.

Not only shaping the body but also filling the pit, why will it be eliminated by the market? Why is this kind of operation forgotten slowly?

First of all, not only do people like to eat fat, but other organs also like to absorb fat. Not only is it easy to be absorbed, but it is also easy to necrosis, because bacteria also like high energy, so this kind of surgery requires a high level of doctors.

A poor doctor transplanted a lump of fat meat. In a few days, he opened the dressing and looked, yo ~! The transplanted fat was absorbed by the body and the operation was done in vain. What's worse, I opened the dressing and saw that my chest was infected and rotten, and I had to clear the wound. If the operation failed, I had to have a second operation.

Moreover, this kind of operation is not only difficult, but also expensive.

Wave after wave of beauty salon advertisements, stand up, stand up, women must stand up, some doctors with two knives went out of the hospital to the beauty salon.

This money is so easy to earn that a fool can transplant fat. Take silica gel and cut a hole in his armpit. The hole doesn't need to be too big. It's enough to be a little bigger than the baby's mouth. It's enough to insert an egg.

Then take the big pliers and insert the silicone into your chest. OK, it's so simple and easy. You don't have to worry after operation. Will it be absorbed or infected.

It's as simple as that. The operation cost is less than 10000 or 20000, and more than 70000 or 70000. Anyway, it's your credit card. It's not online.

Therefore, slow fat transplantation is not only unwelcome to patients, but also not loved by doctors. Don't ask if there is a rigid demand. Choose silica gel when you ask.

This thing is as simple as an old lady eating tender tofu. It's just a matter of opening and closing her mouth.

But if you take it out completely and remove the keratinized tissue of the skin, it will be difficult. It can be said that this operation is no less than a major operation of breast (a) gland.

Zhang Fan's patient is a rich woman in her forties. The old man's sewer has been blocked. They have slept in separate houses for several years. Now her husband's energy is all about making money. She is also relieved. Now she is going to take out the silica gel. Under the molybdenum target examination, it is not very good.

At this time, the operation cost is not as cheap as silica gel removal for Chinese people. It can be done in two or three thousand. Those with contacts may be reimbursed through the medical insurance office!

This time, the cost of surgery alone is more than 200000 yuan. Moreover, anesthesia, medical examination, overtime, lunch and platform fees can all be zero, or even two zeros.

Ouyang's original prepared words couldn't be sent. If Chuang Hao questioned, the old lady would have said that these medical experts were all squeezed out of Chinese medical treatment, so the cost is expensive.

In fact, doctors and nurses were pulled out by Ouyang during his vacation. Because of the large amount of money given, the experts and nurses of the municipal hospital lined up to wait for Ouyang to turn over the brand on the day when they should be on vacation. Really, the money is too easy to make.

Ouyang also thinks that the price is a little high. In the past, giving a platform fee of 30 makes the old lady feel distressed, and the result is zero. People also asked that the chief surgeon is an expert and the top doctor in Northwest China. These assistants are not all ordinary doctors!

Leng was unprepared for Ouyang who had seen great winds and waves.

Zhang Fan had an operation with Chi Qiannan. Originally, Zhang Fan wanted to bring a few more people so that everyone could earn some platform fees. As a result, Ouyang turned the brand of all the rest general foreign doctors. Now even Chi Qiannan, a little doctor who has not yet practised, has become a hot commodity.

In this physical examination and follow-up surgery, the doctors of the Municipal People's Hospital and the doctors of the third hospital are like two different industries.

The doctors of the Third Municipal Hospital also want to work hard and get busy. However, after years of neglect, they were caught off guard. They didn't know what to do or what to do. They looked very angry. However, only they knew the panic in their hearts.

I really should say that the times will abandon you without even saying goodbye.

The Municipal People's hospital is different. It seems that although it is not as busy as the doctors of the Third Hospital, it leaves after work, and the dazzling new treatment methods and new examination instruments make the doctors of the third hospital ashamed when looking at the report.

All the doctors on the operating table are from the Municipal People's hospital. Ouyang wants Zhang Fan to choose some doctors from the third hospital. Of course, this is Ouyang's suggestion.

However, Zhang Fan thought about it. Although he had no objection, he signed all the operation books. The personnel were all arranged by him. He did not choose any doctor in the third hospital.

No matter what the title of the other party is, and no matter what the position of the other party is. Medical treatment is not to tolerate any negligence or luck. For the first large-scale foreign-related medical treatment of catechin, Zhang Fan doesn't want to make it more difficult.

"You take the patient into the operating room and let the patient prepare for surgery." Zhang Fan took Chi Qiannan. Before entering the operation, Zhang Fan said a word to Chi Qiannan.

"OK, Zhang Yuan, I'll go now."

No matter high or low, regardless of gender, regardless of China and foreign countries, the mood of being operated on is estimated to be the same.

The rich woman began to feel uneasy with the nurses and doctors who were armed, wearing masks and hand washing clothes. In the face of the medical staff, she kept showing an embarrassing smile. Maybe this is the feeling that life can't be controlled by herself.

"Don't be nervous. The operation will be very safe. Please take off your decorations and keep them." Chi Qiannan said to the rich woman gently.

Sapphire necklaces, diamond earrings and huge rings can't calm the trembling in her heart. If it hadn't been for the familiar words, she would have cried.

At the beginning of the operation, the brownish yellow iodophor rubbed the chest, the alcohol cotton ball rubbed it, and a light white skin appeared in front of the chest.

Chi Qiannan quickly fixed the attractor, and Zhang Fan has begun to prepare for the operation.

"Leather tweezers, knives!"

If breast filling beauty is simple and full of evil fun, then breast foreign body removal is full of cruelty and blood.

"Have you ever been on the stage for this kind of operation?" Zhang Fan takes an alcohol cotton ball for the final disinfection. The skin where the knife edge is located should be wiped with alcohol for the last time.

"No, I had the longest internship in the hepatobiliary Department of general foreign education at that time. Other general foreign education time was not enough, so I didn't study."

Chi Qiannan doesn't understand. He's going to have an operation. Why does this always think about my previous internship.

Looking at Zhang Fan, the girl raised a little vigilance in her heart, "what does he want to do!"

When the girl was on probation in the bird market, because she was young and beautiful, many male doctors expressed a little love implicitly or now. Looking at each other's bald head, she didn't know why, but she couldn't help thinking hiccup.

As a result, Zhang Fan has such gossip today. Although the other party is young, the girl still feels uncomfortable. Zhang is too good-looking and seems to suffer.

In fact, Zhang Fan feels that this girl is not suitable for liver, gallbladder or gastrointestinal tract. If she doesn't do well, she will be abandoned. But the double gland department is good. Therefore, he wants to know. Unexpectedly, this Xueba thinks crooked. It is estimated that the brain circuit is also very strange.

"Oh, have a good look!" After Zhang Fan finished, he began the operation.

With a little force along the chest, the handle drew a blue and white line, "take the gauze into your hand and pad it on the edge. The force on your hand is slightly outward."

Chi Qian man's basic skills seemed to be a little worse than Wang Yanan. Zhang Fan had to teach them hand in hand.

Chapter 865

Some people inadvertently forget that, like catkins, they look at the sky. In fact, after several spring rains, they fall into the mud.

Some operations, you try to forget, but it is like branding. Whenever similar objects appear, you don't need to associate them. The operations branded in your mind are shown in your mind as clearly as a movie, and you can't stop them.

The more you want to forget, the clearer it is.

It has been three days since Zhang Fan went to the operation, and Chi Qiannan hasn't recovered from the operation that day. If this feeling is a little elegant, it is a sentence: love is like rain and sticky floc. To be popular, it is that you are x by the dog. If you don't say it, the dog has been chasing behind your ass and barking to remind you from time to time.

When Chi Qiannan got up in the morning, his mother made her favorite toast with cheese. When Chi Qiannan was about to bite down with toast, he saw the white cheese in the Yellow toast. He squeezed it with force. The cheese squeezed out like light yellow fat, and then the girl vomited!

Her mother is crazy“ What are you doing? Ah! What's the matter with you. Make tomato pasta, you vomit! You vomit when you cook braised meat. Get you some bread and vomit. What's the matter? You have to tell the truth! "

While saying, he stared at Chi Qian's man's belly with his eyes!

"Mom!" Throwing down the toast, Chi Qian angrily pushed away his chair and went to work with his bag.

In fact, Chi Qiannan was really shocked by the operation that day. The operation that day made her feel the same as a woman.

In her mind these days, even in her dream, the scene at that time will appear!

"Start!"

Zhang Fan finished, took a knife and cut down the breast (a) gland in front of his chest. The cutting of the operation is just like the sword technique. According to the textbook, the apprentices and the leader have their own experience. Now Zhang fan can almost follow the mountain and integrate heaven and man.

The hand is the knife, and the knife is the hand. The sensitivity, sensitivity and stability are really the envy of all surgeons.

Along the junction of chest skin and breast (a) gland, the scalpel, like a thin Rouge paper, cuts through the white and yellow skin. The skin in front of the chest slowly reveals the tofu white dermis, and then slowly seeps out like a ground fissure, and the blood slowly seeps out like magma.

"Don't be stunned, wipe the blood!" Zhang Fan raised his head and looked at Chi Qiannan discontentedly. He was in a daze during the operation!

In fact, Chi Qiannan was not stunned, but stunned. Chi Qiannan would not be so surprised if Zhang Fan had other operations today, whether cutting intestines or sewing stomach. But today's operation, let the girl really, her mind is full of indescribable thinking.

The chest in front of me is firm and beautiful. Really, it is not only good in shape, but also attractive in color, just like a litchi hanging on a branch.

It's not too much to describe Purple Forbidden grapes, green jade balls, bean peppers and Rong crisp, especially for women at such an age. Really, Chi Qiannan, as a little girl, has a feeling of inferiority.

What sagging, do not need to set off, people are so proud to stand up.

But with Zhang Fan ruthlessly holding a sharp tool, like gouging out a pear, he made a long arc cut along the lower edge of the breast, which directly means that Zhang Fan made a lower semicircular incision as large as the breast.

It was so cruel. Such a beautiful organ was cut by a sharp weapon. Chi Qiannan shrunk his shoulder and retracted his arm slightly, as if the knife had been cut in front of her chest.

Zhang Fan made a long cut along the lower edge of the mammary gland (a), shouted Chi Qiannan, took leather tweezers, clamped the upper edge of the incision of the mammary gland (a), and turned it over.

Just like turning up the upper eyelids, white and greasy fat is exposed. The fat in the chest is different from that in other parts of the body, because the milk (a) gland has a powerful secretory function.

This kind of fat is crystal clear under the shadowless lamp when it is cut because there are many secretory pipes in it! Just like countless small pearls closely arranged together, and then drenched with a little lard that will soon be soaked together.

And with the rupture of microvessels, the blood slowly forks and spreads along the ups and downs of pearls, which is really a sad beauty.

Zhang Fan's operation extends upward bit by bit to the junction of breast fat and muscle. It's really like peeling sheep's skin. The knife frees the breast (a) gland hanging in front of the chest.

When the milk (a) gland is more than half free, the beauty of the milk (a) gland is completely destroyed by Zhang Fan. At this time, like a lump of fat meat, it is turned up by Zhang Fan, and the low edge is turned up, just like the hanging fat pig meat, the whole milk (a) gland is turned up by Zhang Fan.

Blood, oil, fat and greasy are all concentrated in front of the chest, just like the front hall of a high-end restaurant. As a result, when you are full, you accidentally go into the back kitchen. When you see the greasy chef shaking his nose and cooking, how comfortable it is to eat, and how disgusting it is now.

And the more disgusting is still behind. When I opened this lump of fat, the gray silica gel under the yellowish fat was finally revealed.

Silica gel can be said to be oval, and its surface is frosted, which is to increase friction. When it is moved gently, it feels more natural, and it can also produce a feel like muscle rebound. Without this layer of frosting, when it is moved gently, it will lose its sense of nature like playing with a fitness ball.

But with this layer of scrub, with the peristalsis of muscles or the kneading of external forces, the tissues of the body and the foreign body are constantly rubbing, grinding and grinding, and the tissues in contact with the silica gel begin to metaplasia.

Generally speaking, the organs that the human body needs to rub are generally keratinized. For example, various channels are full of columnar cells, that is, long rod cells. The most obvious advantage of these cells is wear resistance.

The mammary gland (a) is not good. It is neither fat nor pipe, which is not wear-resistant. At this time, the human tissue is afraid that all the pipes inside will be worn out, so it will automatically produce a layer of special keratinocytes to wrap the foreign body.

And what as like as two peas coconut juice, and after the coconut juice is eaten, the same thing is done with the spoon and the coconut meat. The white and tender white and tender wrapped in blood and pale yellow fat are like the hen that made the egg for the first time. The instant that the egg came down, the blood between the pink and tender was particularly uncomfortable.

"Pull away! I'll take out the silicone! " After Zhang Fan said this, she cut the white and greasy skin with a

knife, and then took out the silica gel completely with large pliers. Chi Qiannan held the tissue plate, looked at the gululu silica gel placed in the plate, and then looked at the milk (a) gland opened by Zhang Fan like a door curtain. She couldn't help shivering. A piece of fat in front of her was like dying to enter her mouth.

From the beauty just seen to the present diaphragm should be in front of her eyes.

And surgery doesn't even count half here. Is it difficult to remove foreign bodies over? Not really. In fact, silica gel is because the fruit that will really cancerous is keratinized like coconut meat.

This thing is said to be skin, but it is crisper than skin. It is said that it is like paper, but it is tougher than paper. Silica gel can be taken out with a pair of pliers. High quality silica gel will not break even if it is rubbed hard under the soles of the feet. Although there are poor quality silica gel that breaks into the body, it is too abnormal for men.

But this keratinized tissue is very difficult. Not only can it not be removed, but the most difficult thing is that as long as this thing leaves a little in the mammary gland (a), it will not only be inflamed, but also cancerous.

Therefore, at this time, the operation is the beginning of serious ~!

"You also take a pair of tweezers and come with us!" Zhang Fan asked Chi Qiannan to take the keratinized tissue with tweezers.

Anyway, there are no major arteries in the mammary (a) gland, and we are not afraid of anything.

Chi Qiannan and Zhang fan head to head, just like whispering. They stare at the opened door curtain and hold tweezers on a lump of meat, just like the aborigines on the African continent eating ant eggs, their necks are sore.

He not only lowered his head, but also tried to get close to the fat dyed red by blood. It was already very fat. His eyes stared at the fat meat carefully, and the tissue inside was printed in Chi Qian's mind.

It's too difficult. Use a little less force with the forceps in your hand. This horny foreign body doesn't move. With a little force, it is like the outer skin of crispy dessert, which is smashed into slag.

Chi Qiannan with tweezers is almost crying.

Chapter 866

What is the most frustrating thing in the world? Some say lovelorn, others say workplace failure.

There are many answers. In fact, the most frustrating thing should be when you are complacent. As a result, you find that the ideal is so plump, but the reality is bony.

Lovelorn can also find more suitable and better understand each other. If you lose in the workplace, you can start over again, but the ideal, the ideal from small to large, is so beautiful and yearning. The result is coming, and the dream falls into a rotten watermelon.

Zhang Fan and Chi Qiannan sat on the stool. Although they were wearing gloves, the fat particles were stained on the gloves and connected between their fingers. While holding 100000 points carefully, they clamped the easily broken cutin, while shaking the trembling yellow fat in front of them.

Although she wore gloves on her hands, the action brought by her hands made the grease stuck between her fingers lick the most holy place in her heart like a disgusting tongue. She was slightly clean, and there had been a layer of goose bumps like burrs between her white swan neck.

While teaching her the operation, Zhang Fan also said: you see, it should be as light as me, just as the sesame on the sesame cake falls on the table. You should suck your finger first, then determine the target, and then start steadily and quickly. Don't hesitate.

Once you hesitate, the strength of your fingers will shake. As soon as your hand shakes, it will form torque and directly crush the sesame, so you can't eat the sesame.

With that, Zhang Fan also picked up a large piece of cutin and put it in front of Chi Qian man. Chi Qian man's heart was full of nausea. She really seemed to eat this thing into her mouth. The wriggling throat is like a busy elevator. It's so uncomfortable for the acid in the stomach to burn the esophagus.

Really, very uncomfortable. She really wanted to throw down the tweezers in her hand, take off her surgical clothes, and then shout loudly: I quit!

However, she can't. five years of medical education and one year of medical practice make her understand that when on the operating table, the only thing the patient can rely on is the doctor, biting his teeth and turning his tears in his eyes.

"Medicine can not only make you have a sense of achievement, but also make others envy and worship you. It is a single wooden bridge. Under the bridge is not a small bridge, but an abyss. If you can't help it,

I can agree that you leave the operating table now ~! "

Zhang Fan gave the girl a good surgery class. It is estimated that she will never forget it in her life.

The throat rolled, tears filled her eyes, and the girl bit her teeth, but she didn't leave!

Zhang Fan nodded in his heart and didn't say much. He sighed in his heart, "Hey, it's still not as strong as Wang Yanan!"

Continue the operation. Bit by bit, it's really like dipping your fingers with sesame seeds. You slowly pick the white cutin on the fat you don't feel much at ordinary times.

This is not fast. Finish one side and the other side. Two silica gel, put it in for up to an hour. If you want to pick it out, hurry up. It's not enough to see it in three or four hours.

The operation is smooth. Most doctors are cheerful, and the atmosphere of the operating room is very light. But for the hospitalized dogs and rotating dogs, the operation room atmosphere is unhappy and little doctor has nothing to do with it.

Telling jokes is the right of the doctor with the highest status on the operating table. They often tease each other with the anesthesiologist, and the anesthesiologist should be a woman.

For example, Xue Fei had a very famous story in the hospital. He said it was his own experience.

It is said that one day, before Xue Fei got married, he wanted to slap with his girlfriend. As a result, he found that the set was gone. Xue Fei went to buy it and walked into the drugstore. Because he was worried and angry, he forgot the name of the set.

He stood in front of the clerk in the drugstore and blushed. He was stunned for such a minute or two. When the clerk was almost unable to hold on, he suddenly asked: is there a plastic bag for JJ!

It is said that Xue Fei was a resident doctor in those years. Now he is the chief physician and has been promoted to the deputy high school immediately, and his position is already the deputy director, but his story will be told every time a new doctor comes in!

As for Zhang Fan, it's different. When he first had a system, although he worked hard on his liver on weekdays, he was still not confident. After all, this thing is a person, not a thing. So during the operation, he had to compare it in his mind, so over time, he cultivated a habit of Zhang Fan, that is, whether the operation is smooth or not, he doesn't laugh.

At the beginning, when Zhang Fan had no status, everyone didn't care. Whether you were a little doctor or not, no one paid attention.

With Zhang Fan's status getting higher and higher, everyone gradually got used to Zhang Fan's operating platform mountain's reticence, and even the directors of other departments began to slowly imitate Zhang Fan's attitude.

After the director imitated, he immediately felt, um, good, very proud and charming. The directors imitated, and the doctors below began to imitate more or less.

There is a saying in the medical community that the operation should be performed with laughter and laughter, and the operation should be signed with a serious smile! Tea Su's own surgeons are used to it. Experts from the bird market can't stand it. Others don't talk, or they're just a simple one, huh!

"My God, what's the matter? Being an appendix is more serious than cutting your stomach! The doctors in tea vegetable hospital are too strict"

In five days, according to the principle of who pays more for the surgery and who comes first, Ouyang finally finished the inherited operations of laicha su. In fact, they are not major operations, but some routine operations.

But these days, almost all the surgical experts in the frontier have gathered here.

The experts of bird market left contentedly. Ouyang priced these directors 50000 for an operation. It's 50000 for any operation. These experts are very proud. Hey, 50000 for one operation. It's really a good business, so when they leave, they are more polite than when they come. Holding Zhang Fan's hand is like parting.

Money really moves people.

When it was just opened, the tea vegetable government wanted to eat big head. Under the leadership of Guan Weisheng, on the left, our government went out of the hospital and on the right, our government made coordination. In a word, these revenues must be taken by the government.

More than a dozen surgeries, only three or four million, but people with a clear eye know that this thing is a long-term business. At the beginning, when Zhang Fan's master academician Lu attended the wedding, he once offered Ouyang a glass of wine. In the old man's words, please cultivate more from the European Academy. The European Academy of thought that even without academician Lu, she would be determined to train Zhang Fan.

Medical experience. I have nothing to teach this son of a bitch, but he has delegated power to him. He is also naughty and doesn't want to learn. Ouyang sometimes gnashes his teeth angrily. Is my mother's level so poor?

However, this opportunity has come. Ouyang now looks completely indifferent. He won't give Zhang Fan a chance to be naughty. In fact, in private, Chen Sheng reported all his work to Ouyang.

Three days a week in the hospital, all listening to the report.

"In this bidding, Zhang Yuan cut down a large part of the human tender, and now the hospital's bonus Zhang Yuan has also raised two grades."

Chen Sheng reports to Ouyang in every detail, but never expresses his own opinions. He is an objective statement, just like a repeater, without any ideas.

He knows Ouyang too well. Although he doesn't touch Zhang Fan very thoroughly now, he can see that this is a competition between the old and the small, so he won't help anyone.

"OK, these are not important. After you go down, comfort the human marker and say that you will recruit more or less in the second half of this year. Do you understand what I mean?"

"I see! Let's say the government is strict. Don't let them hate Zhang Yuan too much. "

"Hmm! ~" Ouyang nodded. "As for the bonus, hey, why is this boy so short of brains? After that, you go to him privately and change the name of the bonus, such as subsidies. Isn't the weather getting hotter and hotter? Can't the high-temperature subsidies be slightly more? Can't the late meal expenses be more? Why do you have to make a world shaking? Let other hospitals bake him on the fire? "

"OK!" Chen Sheng nodded as he recorded.

"How is Dean Gao?"

"The high court has been busy with surgery recently. Zhang Yuan asked the high court to take care of several orthopedics departments."

"I see." Ouyang looked unhappy, but he held back and didn't speak. But looking at his expression, Chen Sheng must know that Ouyang scolded Zhang Yuan in his heart!

Chapter 867

The spring of tea is really coming. The pattering rain is like a sad girl. If you have nothing to do, you will cry.

On both sides of the road in the urban area of chasu, pink winter jasmine flowers bloom all over the city. Especially after the rain in the morning, the blue sky is reflected in the ponding on the road. It shakes slowly with the breeze. It's really beautiful and can make my heart drunk.

In the bird market, people who come to the frontier for the first time in the mainland feel as if they have come abroad. The streets are full of big noses and blue eyes. If they can still hear the melodious sound

of prayer and Sutra at the weekend, if they can hear the melodious scriptures in the desert, look at the Gobi and look at the sunset, they can't understand the melodious scriptures in their ears, but they still have the feeling of being exotic.

But tea is different. Early on, the three generations of old Kang's ancestors and grandchildren and the cavalry came out of their minds. Therefore, there are more nationalities here.

There are people who believe in Tibetan Buddhism and shamans. Anyway, there are many kinds of beliefs, especially urban construction. It seems that there are all kinds of them, old Maozi style, some Tibetan style, and round hat Mengshi, which is very kind of Urban Museum.

It is a city where Chinese and Western cultures collide fiercely, and it is not an economic center, so people here feel comfortable and special to people in other cities, and the children's smiles make people feel more brilliant.

Not only ease, but also tolerance.

For example, on the street and the park, there are piles of old people, including chess players, chariots and horses, arguing like quarrels, and quiet chess players.

Near the community in the evening, among the fragrance of flowers, there are those who jump Guozhuang, model opera, Yangko and folk music. Compared with big cities, people here smile more.

Zhang Fan has been working overtime more and more recently.

It's no good not working overtime. Looking at Chen Sheng with a helpless face, Zhang Fan has to take time out after work to solve the administrative affairs of the hospital.

"You send someone to the meeting of the Health Bureau tomorrow." Zhang Fan looked at the red headed document about the recent health unit and directly told Chen Sheng.

"The Health Bureau requires a director at the Dean level!" Chen Shengfan looked at his record.

"Then let the European Academy replace it!"

"Hehe, let the high court go." Chen Sheng smiled helplessly. Ouyang is a bully who doesn't give up his power. This is good. He's deeply afraid of doing more.

"OK, director Chen's suggestion is good!"

"The leaders of the third hospital want to discuss the management of hospital beds with you when you have time."

Chen Sheng turned over his notes and gave Zhang Fan a report one by one on the recent backlog.

"You go. In a word, it's mainly our hospital. If they don't want to, we can choose the second hospital."

Zhang Fan didn't lift his head. He was busy signing. His name was painted with dragons and Phoenix.

Although the administrative business seems very trivial. For example, when the side door of the hospital opens and closes, the following people will report, but it also slowly exercises Zhang Fan's ability to understand human nature from another direction.

"The subsidy of the canteen has been spread out in all supermarkets of the hospital. The owner of the canteen has complained to me several times that the business is getting worse and worse!"

"Whether he likes it or not, I don't believe it. His relatives can seal our hospital because of this."

"Good! I see. " Chen Sheng recorded, as like as two peas in his heart, "this seems to be a bad service. When he is hardworking, he is like Ouyang."

Because of Wang Yanan's study, Shao Hua and their parties are relatively few. Now Shao Hua is also busy and runs at both ends. Zhang Fan goes to work. She is going to the farm. The farm is now engaged in infrastructure construction according to her design. In fact, infrastructure construction is a little exaggerated.

I built several wooden houses, and then I don't know where to find the drawings. I really got a white windmill house in the middle of the farm. Looking from a distance, it really means a bit of leisurely pastoral life.

Jia SuYue asked Shaohua to go to a small gathering at the weekend.

"You have your own career now. Your family Zhang Fan is also striving for success. People who watch it envy you! Now people from the government are saying that your family Zhang Fan is the president of the tea vegetable city hospital.

It's terrible to think about it. How old he is! You can't judge a man by his appearance! "

Jia SuYue and Shaohua asked for a spicy chicken. The two spicy people hissed and kept sucking the cool wind, but the more they ate, the better.

"What? In fact, my Zhang Fan is not ugly. He is just a little dark. In fact, he is very handsome."

Shaohua doesn't know whether it's hot to roll her eyes or not to judge people by their appearance. She doesn't like it. Anyway, she turns her eyes hard.

"It doesn't matter whether the dean or not. I'm a little distressed now. He's getting busier and busier. People outside seem to have unlimited scenery. In fact, they can sleep when they get home and lie on the sofa.

I wish he were just a simple doctor now. "

"Hey, hey, think about it. Madam Dean, hey, how awesome. Others are in their 40s when they are madam Dean. You..."

"All right, little official fan. How are you now? Are you busy at work or in love? Last time I met my aunt, she told me about you. "

Shaohua doesn't want to talk about Zhang Fan's work. Others don't know, but she knows, really, how much Zhang Fan has paid to get to the present step. She knows too well. Step by step, it is pouring with sweat. Sometimes, she really hurts and doesn't want her man to work so hard.

"Well, work is like that, day by day. Love, hey... "

"You, isn't it good to be plain and light? How can life be so vigorous. As long as we understand and tolerate each other, isn't it good? "

Shaohua patted Jia SuYue's hand gently.

Jia SuYue is more reluctant to talk about himself. Now he looks back as if he deserved it.

I really can't compare. I met several people, either fighting for Dad or talking about mom. They are a little capable and want to take off their pants. Sometimes they often think of someone who doesn't want to invite her to steak.

Jia SuYue sighed softly. Although he didn't say anything, he said again in his heart: he didn't look back before and won't make do with it in the future.

Ouyang went to the Health Bureau, and the driver followed him to the Health Bureau. Ouyang's driver was a car veteran in his forties. He was very nice. Originally, Ouyang wanted to leave the driver to Zhang Fan. Later, Ouyang thought about it and took the man away.

The driver who drove 120 saw that although Zhang Fan is not the president, they all know that Zhang Fan is in charge now, so they all want to drive for Zhang Fan.

Moreover, the government also asked Zhang Fan to choose a driver, "even driving is not free!"

Zhang Fan looked at the last document in his hand and said helplessly to Chen Sheng.

"Hehe, it should be. You often go to other places for surgery. You should have a full-time driver."

"Do you have the right person?" Zhang Fan asked Chen Sheng. Chen Sheng opened his mouth and finally shook his head.

"Hey, you, too thief!" Zhang Fan smiled and didn't force it.

Zhang Fan let the driver go first because one of the trainees he let go came back.

Wang Yanan and Ma Yichen studied abroad. Seriously speaking, they are actually the third batch released by Zhang Fan.

The first batch is Xue Fei. The effect of learning is quite good. Now Xue Fei is doing quite well in the emergency center. Not only his business has been improved, but also all aspects of the emergency center have become more and more formal under the leadership of Xue Fei. Finally, it looks like a center, rather than a simple department for shunting patients.

The second batch is Wang Zipeng. At first, Wang Zipeng's words made Zhang Fan completely remember the boy, "I've been in love with my girlfriend since primary school!"

Zhang Fan, who was single at the beginning, was not hit. Later, the young man entered the anorectal department and worked hard and solidly.

At the beginning, the former director of the anorectal department took his new wife to big cities to make money. The anorectal Department lost its leader and couldn't even get a sharp hemorrhoids, which made Ouyang angry.

Time and life, really! Many people worked hard, but the young man impressed Zhang Fan too deeply, so Zhang Fan observed him for a long time and thought it was good, so he sent Wang Zipeng out for further study.

Elder martial brother Mordor also gave back information to Zhang Fan, saying that the young man worked very hard and was highly praised by the teachers in Mordor.

Now the young man has learned and returned. Zhang Fan is going to hand over the anorectal department to him and let the young man hold up.

"Zhang Yuan, I'll report!" In Zhang Fan's office, Wang Zipeng stood shyly in front of Zhang Fan.

"Hehe, OK, just come back and sit down! How about going out this time? "

"Yes, Zhang Yuan, thank you. When you go out, you know you lack too much!"

"Well, just know your shortcomings. Our anorectal Department has been delayed for too long. Now I'll give the Department to you. Are you confident to hold up? "

"As long as Zhang Yuan supports me, I dare to try!"

"Hehe, it's a mule or a horse. Take it out for a walk and let everyone see how you're going to study this time."

Wang Zipeng secretly clenched his fist!

In the hospital, the orthopedics department has reassured Zhang Fan. Now the orthopedics department is not the spring and Autumn period and the Warring States period. The coordination and cooperation are very good. The skeleton is set up, and now it is waiting to be filled slowly.

Now there is anorectal department. Zhang Fan knows that he is different from Ouyang and even Lao Gao.

The two of them have been immersed in the medical industry in the hospital for decades, so Ouyang can be domineering, Lao Gao can be like water, but he can't. He must start from the most familiar and smallest department.

Then slowly build up prestige. I, Zhang Fan, the operation is not bad, and the management is OK.

If you want to go further and become stronger in the future, you must have a base and a rear platform, which is why Zhang Fan is trying to adapt to the administration. Dealing with people is sometimes more difficult than surgery.

The next day, a patient with anorectal granuloma was pulled onto the operating table.

What is granuloma?

Generally speaking, it is actually because of inflammation that the nodular lesions proliferate from the body.

It sounds very tall, but to be honest, it's quite shocking. In all diseases, it's like an alternative.

Zhang Fan takes the lead. Wang Zipeng is today's protagonist. Today, as long as young doctors who are a little motivated are paying attention to this operation.

Chapter 868

Once the emperor and a courtier, although it seems a little feudal, in fact, it has something to do with the personality of leaders. No matter who it is, it can't be avoided.

In the old Huang era, when people became the president, they were all their disciples, and they made every effort to develop surgery, which brought the development of tea vegetable hospital into a fast lane and a small climax.

When Ouyang came to the hospital, she preferred to develop internal medicine, but the old lady was lucky and a Zhang Fan appeared under her hand, and the development of internal and external medicine was faster and faster.

It can be said that the tea vegetable hospital is both internal and external in Ouyang's hands, and its development has been greatly improved.

Now it's Zhang Fan. At present, we can't see anything else, but we can see that Zhang Fan likes to use young people.

Not to mention Xue Fei, it is said that all the people Xue Fei sent out to study in the future are not only the top colleges in China, but also all young people. This kind of advanced study in the top hospitals has made the frontier doctors envy that they can't cover the sky tightly. It sounds like a joke, but it's sad.

So now, for the young doctors and nurses in the hospital, their opportunity has come.

In the operating room, Wang Zipeng quietly faced other doctors in the Department who were older than him. He knew how bad their eyes were. He didn't go to find something, but waited quietly. He knew that as long as the technology passed, Zhang hospital would give him a head.

The patient has been sent in. She is a female patient. Although she is a young woman in her early thirties, even without make-up, she gives people a feeling of amorous feelings. It really makes men have a desire to protect.

Although she was wearing a wide patient suit, her style really eclipsed the green little nurses in the

operation. Even the head nurse, who is known as a flower in the operating room, didn't dare to come in.

Light blue eyes, obviously not dyed yellow hair, draped around the neck like water bamboo, three-dimensional facial features, blue and deep eyes, timidly looking at the people in the operating room.

Really, even where there are beautiful women everywhere in the frontier, she can figure out which kind is outstanding.

Although he is a charming, he is also an international student. In high school, he was recruited at public expense by a university in Turkey. In the mainland, if a child of the family studies abroad, he can absolutely envy the people around him. Studying abroad is absolutely an example for others' children, just like simultaneous interpreting.

But in the frontier, to tell the truth, there are a lot of foreign students. It is not strange at all, and I don't know why, such as Turkmenistan, such as Stahl, and even Germany in Europe.

Many of our own people can't go to college. Why do we have to train Chinese people? It's strange to pay living expenses and even wages to our family.

Women go to school and get married in Turkmenistan. It seems that they are very happy. In fact, in Turkmenistan or Stan, men are women. Finally, she returned to China with the pain on her back.

"Zhang Yuan, I'm going to take a position!" Wang Zipeng whispered to Zhang Fan sitting on one side.

"OK, go!" Zhang Fan nodded.

People, really, it is a natural law that eating grains produces all kinds of diseases, and there are rules to follow for relative treatment. Often some strange diseases, some strange diseases that are difficult to speak of, are not only difficult to treat, but also can not be completely cured.

Especially the rectum and anus. In the hospital, it seems that there is no sense of existence in the human body. As soon as other departments say it, they will proudly say: I am orthopedic, I am outside the brain and I am inside the heart.

The tone is full of pride, really! Then listen to the of anorectal. Doctors often feel embarrassed, subconsciously lower their head and smile shyly: I'm engaged in anorectal! It seems that the position of anorectal department is very humble.

In fact, for humans, a well functioning and reliable anorectal is more important than any weight of brain.

For conventional anorectal diseases, it is not easy to treat at all, because this organ is really complex. In

terms of nerves and blood vessels, there are two sets in the rectum and anus, and because the environment here is complex and there are quite a lot of bacteria, even a refractory recurrent hemorrhoids can give anorectal academicians a headache.

Routine is not easy to treat, and unconventional diseases give doctors a headache.

Because there is a slight problem in preoperative consideration, there is neglect during the operation, and then after the operation, the patient has difficulty defecating or incontinence. Really, at this time, the tortured patient has the heart to kill.

Moreover, this place, especially women, is particularly vulnerable to infection. Compared with men, women in this area are as if they are not well developed.

Simply put, if anal cancer is found, a male, the director of a provincial hospital can do it, while a female, not an expert, dare not touch it.

Human beings pay special attention to the protection of anus and intestine when they get up early. For example, when you release your hand, you often look back! Many people feel sick. Don't think so. This is a means of human evolution to protect themselves.

Whether there is bleeding, pus or formation is very important for you to understand your body. In addition, many women wipe from the back to the front after going to the toilet! Then, at a young age, a lot of gynecological diseases.

Please note that if you wipe from front to back, E. coli will not infect your reproductive system first.

Wang Zipeng helped the anesthesiologist put the patient's body position. Although several other doctors were also helping, they knew Tieqing's face. If Wang Zipeng didn't do well in the operation today, they would definitely find Zhang Fan and say that Zhang Fan was eccentric.

Anorectal position, very special! There are two kinds of popular in the world. For example, in the United States, patients are allowed to climb down, and then the middle end of the operating table is shaken up to support the lower abdomen and tilt the hips.

Europe is the cut-off point. Just like the two rings with two legs hanging in some characteristic hotels, they are suspended.

Relatively speaking, Lao Mei's position is better and her surgical vision is clearer, but stubborn Europeans think that Lao Mei has no tradition and they despise it.

Wang Zipeng also learned American style in foreign affairs, so the posture allows the patient to climb down.

How to describe the operation towel? Specifically, medium order, large order and small order are very

boring.

In the northwest long ago, when there was no heating in winter, the temperature was too low, so they covered a thick quilt, but the quilt was too thick and pressed on the neck and chest, so they would have a little difficulty breathing.

Then a master invented a bamboo shelf to top up the quilt mouth.

In fact, the operation towel is very similar to this. There is an iron shelf in the patient's chest near the head. When laying the sheet, the last hole towel is covered with a long cover, and the patient will show his head. Even if it is not general anesthesia, he can't see the operation process.

Hole towel, as the name suggests, is actually a sheet with holes. Where surgery is needed, cover the hole where it is needed to expose the tissue that needs surgery.

Therefore, many people say that naked people are deceptive. If you don't have special organs, you can't distinguish between men and women.

Just like a joke, revealing leg hair makes you guess gender. You can't guess it.

"Zhang Yuan, ready. Do you have surgery?" After Wang Zipeng finished the list, he turned his head and asked Zhang Fan.

"OK, I'll go too."

Wang Zipeng's face was gloomy "It seems that Zhang Yuan still doesn't trust me. "

But he didn't speak. Who doesn't know how overbearing Zhang Fan is on the operating table. Even if he wasn't the Dean before, as long as he had an operation, he was the main knife.

Other doctors were a little Schadenfreude, "Hey, look, look, Zhang Yuan is still not at ease!" Although he didn't speak, there was a proud expression between his eyebrows.

To tell the truth, Zhang Fan loves to use young people, which puts great pressure on a group of doctors who are not old or young.

In the past, we could spell experience and suppress young people with experience.

But now, a group of young doctors from top hospitals are fighting with their bodies? Now I'm almost bald. How can I fight with young people? So it's most embarrassing for doctors of this age in the municipal hospital.

After brushing his hands, Zhang Fan looked at Wang Zipeng standing in the assistant's position and said in wonder, "you are the master knife today! Yes? No confidence? If I have no confidence, I..... "

"Yes, yes, yes, Zhang Yuan, have confidence!" Without waiting for Zhang Fan to finish, Wang Zipeng said and hurriedly stood in the position of the main knife, up and down, feeling like a roller coaster.

"All right, let's go! Disinfect once with iodine tincture. " After that, Zhang Fan stopped talking. He came to investigate today. He can't make a fuss over the host.

In fact, the difference between iodine tincture and iodophor is in concentration. Relatively speaking, iodine tincture is generally more irritating to the skin than iodophor, but the disinfection effect is also stronger than iodophor. Conventionally, it is generally not used for disinfection of organs rich in nerves and mucous membranes.

But the patient's disease has to use iodine tincture here!

Iodine as like as two peas, if iodine is different from iodine, iodine is the soy sauce, and iodine tincture is the old one. It's not exaggerated. It's the same.

The hole that only leaks out of the anus and intestines is wiped with heavy iodine tincture, just like the pickled Octopus legs, the anus and intestines are exposed.

If the man who still retains the illusion of this woman before the operation sees the exposed anus and intestines, he is now as determined as an eminent monk! Beauty is all skeletons!

At a woman's age, if it is normal, this place should have pigmentation, but because of disease, this place not only has no pigmentation, but is pink and tender, giving people a terrible pink that makes people 30000 meters away from it.

Pink, originally a lovely color, but her pink is scary.

It's really scary.

Iodine tincture disinfection, alcohol deiodination and pink completely reveal its original color. It is so ferocious and terrible.

Chapter 869

Maybe it's because I'm sorry, maybe it's because Wei Ji hates medicine. After wiping with alcohol, Zhang Fan looks at the patient's anorectal area and frowns slightly.

The traces of hormone use are very serious. Although most skin diseases are widely used in hormone use, unreasonable use will make the disease happen repeatedly, resulting in vegetations producing antibodies to hormones, and then finally become a situation without drugs.

Near the anus and intestines, how to describe it, it is very similar to the mouth of lamprey. The pink flesh column is like a redundant vegetative stunted sixth finger crawling all over the anorectal opening.

Moreover, where the palm is big, these pink meat pillars are different in length, three or four centimeters long, just like a pink maggot lying on the anus and intestines waiting for food. And the short is less than a centimeter, which is really like an outgoing tooth, with a layer of sick white in pink.

Then mixed with some sparse yellow body (a) hair near the anus and intestines. Under the moisture of the remaining iodine tincture, it is like a slowly rising seedling. Some are like screw caps, and some are wrapped around the meat column. Really, it looks extremely evil.

At the tip of the head of the longest part of the meat column, necrosis has obviously appeared, pus scars stick to the meat column, gray and white mixed with cyan and yellow, and pus is shaky! There is really a desire to hold your eyes and squeeze out the things inside immediately.

The light yellow iodophor without iodine is mixed with pus, the blood overflowing from the meat strip when wiping, and the white plaque left after the use of hormones near the anorectal mouth. Really, it can't be looked at directly.

"What disease are you diagnosing!"

When Zhang Fan was in the dermatology department, to tell the truth, when he was also a sprouting new, although he had entered the door to the operation.

But in fact, medical treatment is in a state of half understanding, but Guli, director of Dermatology, insisted that Zhang Fan approach the affected part of the patient and carefully observe the sharp (a) wet (a) wart. After Zhang Fan not only understood what dermatology is, but also improved his hiccup threshold a lot.

With gulee's bowl of wine at the bottom, to tell the truth, seeing this now, he has no hiccup at all. At most, he has a little goose bumps. To tell the truth, as long as he is not often exposed to this disease, he will definitely be able to climb out of his heart and lungs and vomit.

Dai Yongshou, the acting director of the anorectal department and the attending doctor, hurriedly said: "at present, the first diagnosis is suspected of sexual (a) disease granuloma, and the second diagnosis is flat condyloma.

Because the patient's medical history is unreliable, we can't determine it at present. We'll wait for the examination to determine the diagnosis, but the treatment can't wait for the examination.

If you do not do treatment, infection will lead to pyemia or anal fistula by the focus, and the condition will be much more serious than now.

Therefore, after the research in the Department, we decided to give the patient a thorough surgical resection and anti-inflammatory and anti-virus treatment before the second stage treatment. "

Dai Yongshou knew that Zhang Fan was not satisfied with him because Zhang Fan gave him the opportunity. When the former director of anorectal Department went on strike and Zhang Fan made trouble, Zhang Fan asked him to jack up the anorectal department.

However, due to the repression of the former director, he couldn't take many key steps of surgery at all. He was also anxious. The more anxious he was, the greater the contradiction with other doctors in the Department.

Therefore, this also led to the reason why Zhang Fan chose Wang Zipeng instead of other doctors in the Department.

Knowing that Zhang Fan is not satisfied with him, Dai Yongshou is still very worried. People are just like this, and he still cares about the Department Director. Therefore, facing Zhang Fan now, he has no confidence at all.

Not only did he have no confidence, he even avoided looking at Zhang Fan.

"Oh! What?" Zhang Fan looked at Dai Yongshou.

I don't know when, the surgeon slowly began to fear Zhang Fan.

The silence during the operation, the indisputable words during the operation, and the brave responsibility during the operation. On weekdays, you can easily find other doctors to go to one of the best hospitals in China for further study, and you can easily summon experts from the bird market to tea. These are not allowed for surgeons not to fear him.

"Because the patient's own medical history is inconsistent with her symptoms, first of all, this kind of (a) disease granuloma often occurs in some developed and extremely underdeveloped countries with relatively rampant drug (a) such as the Netherlands and the UK.

Dr. Wang and I also searched the journals and even asked Stan's colleagues to understand that no

doctor in their country has published journals of similar diseases.

The patient firmly denied the history of drug inhalation (a) and Youye. Therefore, we agree that the patient's medical history is unreliable! "

"Oh, you also contacted Stan's colleagues?" Zhang Fan asked curiously.

"At that time, the diagnosis was unclear and her medical history could not be judged. I had to contact one of my classmates who opened a clinic in Stan."

Dai Yongshou said uneasily.

"Very good, whether the diagnosis is right or not, first of all, this attitude is there. Yes, it seems that the anorectal department is not invariable. It's good!" Zhang Fan is very good with two. Dai Yongshou's eyes are a little red!

Their efforts have been seen by the leaders, and their efforts have been recognized by the leaders.

"What are the results of her five tests for infectious diseases?"

"Others are negative, but syphilis is weakly positive and needs a second review."

Dai Yongshou said quickly.

"OK, let's start the operation. Everyone be careful. Especially Xiao Yan, you must be careful when threading the needle. Don't stab yourself. Say more when handing over. After all, it's suspicious positive."
"

Zhang Fan finished talking to the doctors and said to the instrument nurse.

"OK, Zhang Yuan!" The little nurse said yes.

"Knife!"

"Knife!"

Because of Zhang Fan's explanation, instrument nurses and doctors will say more when handing over sharp tools. It's ridiculous like a repeater, but it's to prevent the occupational exposure of medical staff. No matter how ridiculous, everyone is meticulous.

After Wang Zipeng took the knife, he looked at Zhang Fan. Zhang Fan didn't say anything. He was waiting for Wang Zipeng's knife with the plastic tube of the attractor.

Seeing that Zhang Fan didn't express it, Wang Zipeng took a slight breath and then cut.

On the human skin, especially this kind of vegetations, the general scalpel is often used to remove the effect is not very good, and it is easy to cause bacteria or viruses to enter the blood and cause sepsis.

For example, we have a monkey on our hands. In fact, the scientific name of this thing is wart. People who love beauty think this thing is unsightly. Then some gnaw their teeth or cut them with a blade.

As a result, after the tooth gnawing knife was cut, it was like a pile of little monkeys under the mother monkey. It was one, but it turned into many.

In fact, there is the simplest way to destroy this thing. Take a thin thread or hair and tie a knot at the base of this thing. It won't take long. After three days, this thing will die naturally, leaving a little scar.

A wart is so difficult, not to mention this kind. Therefore, for conventional treatment, if there are few vegetations, liquid nitrogen freezing or laser ablation is generally selected. The temperature of liquid nitrogen is very low, and the point on the vegetations can directly freeze and crack the cell wall.

If there are many vegetations and there is a foundation attached to the skin, the effect of this liquid nitrogen is often not good. Because there is a foundation, this thing will be removed and relapsed like leek, which is easy to lead to cancer.

Therefore, when there are too many vegetations, it is often burned with an electric knife.

Now the knife is actually used to remove one for medical examination.

Wang Zipeng chose the strongest one, gouged it out toward the base of the lesion, and then pulled it up with pliers. The lesion is like rotten meat that has been put for weeks in summer. It looks pink and fresh on the outside, but it is full of pus and voids. It is really a big green bug lying on the banana leaves.

"Tissue bag, now immediately give it to the case department for rapid disease examination!" When Wang Zipeng saw that Zhang Fan didn't speak, he explained to the nurse.

"OK!" The itinerant nurse looked at Zhang Fan and nodded.

In fact, the female patient was in her prime. When tea Su was in high school, he also worked as a school dancer. He often performed and was found by star scouts.

However, perhaps young, perhaps because of curiosity, she finally chose to go to other countries.

Foreign subsidies are also divided into three, six, nine and so on. After going abroad, she has average learning and poor acceptance ability. Slowly, slowly, she will be eliminated by others for face or not to return to China.

She chose to marry local people.

Sometimes, every drink and Peck is a fixed number. She coveted each other's financial resources and ignored each other's character.

At the beginning, the rich children led her to live a drunken life. But in a few years, as soon as the freshness passed, the other party's terrible face appeared, and all kinds of torture came.

Group gatherings in groups. When you get drunk and smoke, you can do everything. If you don't want to be a person, you'll be willing to tie it up. If you don't agree, you'll be willing to turn it over.

People, after all, have to pay for their youth, ignorance and vanity, and the price is expensive.

Half a year or forced or voluntary langdang life not only made her heart and body full of scars, but also lost her qualification to be a mother. Not only that, she even paid her soul in order to return to the motherland she despised.

Without money, you can make money just and aboveboard. Without money, you can live clean.

Unfortunately, in order to live in the so-called foreign upper class society, she entered the fast lane and turned over.

It's really an old Chinese saying that there is no free lunch in the world.

After cutting one, the formal operation began.

"Electric knife!"

Wang Zipeng took the electric knife and put on protective glasses. His assistants and equipment nurses all put on protective glasses.

Zizilala sounded in the operating room.

This disease must be uprooted. If you use an ordinary scalpel to enucleate one by one, let alone infection, first of all, the patient is estimated to be very uncomfortable. There are too many lesions.

If all of them are gouged out with a scalpel, it is estimated that the scar adhesion here will make her legs unable to step open, or her hands will help break off when going to the bathroom in the future! It's terrible to think about it.

Therefore, electric knife is the best way.

Zizilla, when the electric knife was placed on the patient's lesion, there was smoke on the lesion. Needless to say, the pink lesion was emitting a large number of pink bubbles. Really, with the probe of the electric knife, the pink bubbles are like boiling a pot, and the droplets overflow.

It's really like chili noodles sprinkled on mutton kebabs and fat and tender fat. It's Roasted by fire and looks like fat cracking, crackling, fat bubbles, pink bubbles!

Curling smoke!

Chapter 870

In the medical circle, it is estimated that the nausea degree of the digestive department can not be ranked in the top three. In this regard, other departments of the surgical system regard general surgery as a fecal extractor and despise it at all.

More disgusting and terrible than the digestive department, such as the burn department. This department, especially in cities with developed chemical industry, can only be done by people like God.

What is more disgusting and tight than the burn department is the anorectal Department of the middle brother of the surgery department. There is Xihua in Sanchuan, and the cattle in the basin circle can no longer be cattle.

But the companion next door didn't say a word. Taking out his middle brother was like taking out a hot pot, leaving Sanchuan speechless.

What is more disgusting and terrible than anorectal department is the Department of Dermatology (a). Really, for example, in a city in Yangcheng circle in the early years, dermatologists there could become gods.

If the disease is mixed with anorectal and dermatology (a), there can be no more terrible and evil disease than this.

The chain of contempt in the medical circle, surgery mocks internal medicine, internal medicine despises surgery, orthopedics despises general surgery, ophthalmology despises all surgery, and extrabrain despises all medical disciplines. It looks like a telephone company in Manchuria.

Just as the three major telephone companies in China despise each other, be careful of mobile fraud! Beware of Telecom payment fraud. Beware of Telecom fraud in mobile payment!

In all medical circles, anorectal Department has always been a brother in a brother! And venereal dermatology makes all doctors unable to look directly! Because this department is too strong, breaking the sky and anti human.

After the director of the anorectal Department of tea vegetable ran away with his little wife, the Department collapsed.

Zhang Fan has set an example for the anorectal department now. As long as he is willing to work hard and struggle, I Zhang Fan will spare no effort to provide strong support!

On the operating table, it was really smoky and burning, like a camping barbecue with two knives.

A few assistants leaning back slightly straightened their arms and tried to stay away. But the chief surgeon can't. He can't stay away.

Wang Zipeng took the electric knife and gave it a pep talk. He had to move fast in and out. If he entered slowly, the rotten meat around the lesion would wrap the electric knife. If he came out slowly, the high-temperature metal sheet of the electric knife would burn a large area of scar.

This place is too special, and the lesions are dense. One lesion has a little more scars, so if it accumulates, the whole lower (a) yin (a) can't be seen.

If only in terms of aesthetics, the doctor can think of ways to generate a large area of contracture, which is troublesome. This place is not anorectal orifice, urethral orifice, urethral orifice, or (a) reproductive organ. If the scar area is too large, this place contracts together, and the consequences are unthinkable.

This kind of operation binds the doctor to every inch. Really, the doctor who does this kind of operation has a crying heart.

When roasting mutton, even if it is fresh mutton, the barbecue master straightened his arms and pulled his neck away from the oil smoke.

The doctor, now the chief knife, Wang Zipeng, is like an old lady wearing a needle. Almost all of them climb between the patient's two (a) legs. They can vaguely ask a mixed smell between breathing and breathing.

Every time the burn and the pink foam burst, they splashed on his protective mask.

He must ensure the minimum area of scald, and ensure that each lesion must be completely and cleanly removed, and cannot leave a base, otherwise the place will spread like a star lit fire in a short time.

The mask can prevent the splash of liquid, but it can't prevent the smoke. Zhang Fan has followed Wang Zipeng's electric knife to the greatest extent with the attractor.

Unfortunately, it's useless!

The lampblack is too big, because it originally contains a large number of fat pads, and the content of subcutaneous fat is particularly high. When the electric knife breaks the skin, yellow fat comes face to face.

If it's just pure fat, in fact, the lampblack can be tolerated, just like the smell of barbecue, just a little less seasoning.

However, it is difficult to accept the smell of the lesion, because the virus causes heterogenesis and bacteria cause pus.

Therefore, when the electric knife is baked, the smell is too bad. It smells a hundred times worse than the smell of burnt shoes and broken plastic.

Sao Jiao has a strange smell that can't be described, but can make people go straight to the sky.

With a protective mask, Wang Zipeng's tears are flowing, just as his beloved toy is baked into a charcoal gourd. He can't stop! It's smoking and disgusting.

But man is a strange creature.

Watching others eat delicious food can quench their thirst and secrete a lot of saliva! Seeing the drunk vomit all over the floor, he can also disgustingly secrete saliva from his mouth.

Now, Wang Zipeng, with tears without feelings, runs away like his girlfriend who has loved for decades.

The disgusting dog wants x, but the saliva in his mouth is so much that his tongue is floating, just like the endless tea river.

Swallow it, disgusting! If you don't swallow it, it's more disgusting. Really, this kind of operation is too painful.

The smoke diffused in the operating room. Although there was a lot of suction, there was still a faint smell all over the operating room.

It is estimated that naughty male compatriots smelled it when they were young.

Just like the smell of dead mice drenched with kerosene and ignited, there was a scorching smell in the operating room.

The itinerant nurses couldn't resist wearing three layers of masks~

Little by little, between the ano-rectal mouth and two (a) legs, the pink disappears a little, and the scorched black becomes more and more.

At this time, really, although it was as black and scorched as the positions bombed by shells, it was not as terrible and disgusting as at the beginning.

People are really strange. For example, the skin of hip (a) is definitely softer than the skin of the face, whether maintained or not. This also shows that cosmetics may not be more effective than boxer pants.

The roasted fat Canyon is like a pimple in youth. However, this kind of dimple is so lovely and not so disgusting at this time.

In the hospital, patients in all departments have more or less similar gait.

For example, in the respiratory department, the patient covers his chest with his right hand and forks his waist with his left hand. He coughs step by step, and the patients are thinner than each other.

For example, in the digestive department, many patients cover their mouth with one hand and their mouth with the other hand. They are deeply afraid of taking risks up and down.

The patients in the Department of sex (a) are counted one by one. When the doctor comes, the man walks like a low Taijun, with eight characters moving step by step.

Female patients walk like grasshoppers, jumping step by step.

After treatment, both men and women are almost as big as crabs. They can divide their legs, pull one leg and walk with extra boldness.

Why do you want to go here? Grinding, pain, no arrogance.

The pink between the belly and thighs was finally slowly baked clean. The tearful Prince Peng raised his head, looked at Zhang Fan with red eyes and closed his mouth tightly.

"Yes, the technique is good. The patient's wound is small and accurate. The operation is clean and the damage is small. It seems that there is no waste of time in this half a year. It's good!"

Wang Zipeng grunted and swallowed his saliva excitedly!

"Zhang Yuan..." sobbed in his voice.

He remembered his hesitation when he decided to take a department. When he transferred to another department, he was busy in love. He didn't want him in surgery one by one. At that time, he regretted that his family finally spent money in the anorectal department.

It's not bright to enter, but the young man has to let his parents, his girlfriend and even his girlfriend's parents recognize him. He worked hard day and night when he was in the magic capital.

Now, the reward comes, the pay finally bears fruit, tired, but full, disgusting, but gratified!

The next day, at the morning meeting of anorectal department, Wang Zipeng was appointed as the general manager of hospitalization! Zhang Fan has high hopes for anorectal department!

Wang Zipeng and Dai Yongshou were even more excited, "we must make chrysanthemums smile all over the mountains!"

In the hospital, the youngest group of doctors are like beating chicken blood. They are not afraid of hardship and fatigue. They are afraid of not being recognized and ranking according to seniority when they pay.

But now there is an example!

When the European Academy did not become Secretary of the European Academy, Zhang Fan had a very moist life.

There's a flying knife. You can go as soon as you say you want. Sometimes you don't have to call. If you send a text message, the old lady can give him the bottom.

Now, Zhang Fan wants to go and send a text message. It's like a cow entering the sea. He's silent. When he calls, he either doesn't answer or is on the phone! Zhang Fan sometimes wondered if the old lady had blackened me.

In the past, Zhang Fan was invited to dinner, but Zhang Fan pushed everything he could. Now, more and more people invite Zhang Fan to dinner, and some can come to the hospital to block the door.

The presidents of hospitals in neighboring cities came to study and investigate tea vegetarians, and Zhang Fande came forward to receive them.

Every year, the medical examination of the hospital is invited by the boss, and Zhang Fan has to be invited.

Really, sometimes, Zhang Fan feels trapped by Ouyang.

"Director, you have to help me." When Ouyang was gone, Lao Gao's spirit finally got better.

Looking at Zhang Fan, who was recruited by himself, Lao Gao was full of pride. In front of Zhang Fan, his character is like himself, and his temper is more similar. He is not rude and reasonable. He can show the most sincere smile to anyone. That's enough!

"What's the use of you oppressing me? I saved the country!"

Lao Gao smiled, "why, can't you eat it? No, you see, I'll tell you, you're just beginning.

You can't stand it. How to build a team in the future.

You just expect others to generate electricity with love?

Power, achievement, income, status, which do not need you to consider, this is also a kind of practice. "

"Director, as like as two peas in Europe, how are you now?"

Zhang Fan said reluctantly that when he faced Ouyang, he mostly played a little rogue, because Ouyang only ate soft rather than hard.

In the face of Lao Gao, Zhang fan can play some of his little temper.

"Hehe, you, all right, tell me what to do."

Lao Gao smiled helplessly. He couldn't help him. Zhang Fan in front of him is his medical sustenance.

"Hey, hey, I knew that the director didn't say anything to me. The annual bidding of the hospital is about to begin. You have to check it for me! You take the lead. "

"OK, I will decide the wicked."

Spring is warm and flowers are blooming. It is sunny in April. It is already hot in the south. Everyone is sweating. In the tea vegetable City, you can wear a thin coat.

But on the border of the plateau, the cold is still the mainstream. On the snowy mountains and plateaus, for soldiers patrolling the border, winter is not terrible, and the equipment issued by the state is enough to resist the severe cold.

When the cold and warm hand over, it is the most dangerous time.
