### Chapter 136

Zhang Fan didn't think about what happened in pediatrics the next day. This kind of person is like this. The government can't help it. What can he do as a little doctor! Take it as if you were bitten by a dog and injured on duty. Have a rest!

After working for two years, I saw this kind of family for the first time, which also taught Zhang Fan a lesson.

Eating at Shaohua's house, Shaohua's father and mother denounced such bad parents together. Shaohua holds Zhang Fan's hand and looks at Zhang Fan anxiously for fear that Zhang Fan is sad. Jing Shu is also very angry. Originally, Zhang Fan didn't want to say, but he had to rest for a week.

Zhang Fan doesn't have to supervise the house. Shaohua's father can talk to the workers every day because he is bored, so he actively supervises every day.

Jingshu's admission notice has also arrived in LAN city. Shanghai Jiaotong University, a college in ZX District, takes public basic courses in the first year and majors in the second year.

Now we have to consider Jingshu's departure. It will be reported in September. Although there is still more than a month to go, we have to prepare in advance. Zhang Fan estimated that there was no time. A pediatric transfer made him find many problems.

"You're in your class. Jingshu asked me to take her to college with my mother and your mother, and then I'll take them around the big cities in the south." When Zhang Fan discussed with Shaohua, Shaohua said.

"That's OK. You have to go to Lan City first." Zhang Fan said.

"It doesn't matter. You don't have to worry about it anymore. I will send Jingshu to school on time. Then bring the old man back. "

"Hehe, you are so kind!"

Li Xiao found a good location for Ma Wentao. There was a three-story building next to the maternal and child hospital. It used to be a hotel. Recently, because of the problems of several shareholders, he wanted to change hands for rent. This place is wonderful. Across the wall is the maternal and child

hospital!

Li Xiao told Ma Wentao, and Ma Wentao quickly said, "aunt, great, good place! It's really a good place! Rent it directly. In a few days, I'll take the decoration drawings to tea vegetable city! "

Why does Ma Wentao have to open a hospital in a small place? He's not stupid, and his money doesn't come from the strong wind. Although it's the best to practice without losing, it's better if you make money. Even if his father opposes this kind of business, there's no reason to make money openly and justly.

He opened a hospital in chasu city and decorated it for Li Xiao. Ma Wentao had planned to buy some conventional inspection instruments in the early stage, such as blood routine, ECG, urination microscope and so on. If biochemical inspection is needed, he will go to cooperate with public hospitals.

Because he has capital! This is not a thing. After negotiating with the experts, he thought out how to carry out business. As long as the hospital moves towards a virtuous circle and cultivates several own experts in a few years, everything will be smooth.

Now I'm really sleepy. When I meet a pillow, the inspection instruments for women and children are no worse than those in the municipal hospital. The state has vigorously developed women's and children's medical treatment in recent years, and the facilities inside are very good.

A week's rest also made Zhang Fan a lot more angry. The troublemaker's parents see that Ouyang is not right, and the association has dispersed. They consume no income every day. He can't consume it!

The departments of chasu hospital are quite complete, but they are different in size, including internal and external women and children, and then some other small departments.

The former director of the Department of gynecology in chasu city went to the women's and children's Hospital as the president. Now the director is Cheng Hong, an expert specially invited from the frontier provincial hospital after Ouyang came to power. She has no hope of being promoted to Director in provincial hospitals. She graduated as a graduate student, and doctors from many famous universities in provincial hospitals have grown up. After communicating with Ouyang, he simply came to tea vegetable city as director.

Doctors with strong ability can not be the president, but they must be the director, which is a question of the right to speak. Regardless of interests, the decision-making power of an operation or treatment plan can enable people with aspirations to show their aspirations.

Gynecology and obstetrics are not divided into departments. Doctors change once every six months, but only one doctor is on duty to be responsible for gynecology and obstetrics. Compared with general

gynecology emergencies, most of them are obstetrics.

Because of the relationship in pastoral areas, many herdsmen do not have the habit of regular pregnancy examination. When they are about to give birth, they go to the county-level hospital for hospitalization, but the county-level hospital often sends pregnant women to the municipal hospital.

Cheng Hong has a good level and a good reputation. Release her name, directly suppress the city's maternal and child hospital, many people are attracted by her name.

Shortly after the founding of the people's Republic of China, there was an incident of border people fleeing across the border. The specific situation will not be discussed. Over the years, many original Chinese people have become Kazakh people.

Many people who ran out in those years were either parents or brothers and sisters in China. China is developing better and better. Many people want to come back, but they have no chance.

Kazakhstan's social economy is a replica of Russia, with a large gap between the rich and the poor and many oligarchs. Although the hospital doesn't need money to see a doctor, the treatment level is really poor. Many rich Kazakhs come to the frontier for treatment.

Chasu city and Kazakhstan are neighbors. Many Kazakhs come to the city hospital to see a doctor. Re Yihan was one of those who went out that year. She operated the gem industry in Kazakhstan.

Kazakhstan is rich in minerals, and the people of all ethnic groups in China like all kinds of gemstones very much. Reyihan's brothers and sisters are in China. She brought the gemstones of Kazakhstan to the border, and then returned to Kazakhstan with the crops and light industrial products of the border, and gradually became a little rich.

Because of excessive menstrual blood, hysteromyoma was found in Kazakhstan. Kazakhstan's doctor's suggestion was to directly remove the uterus. Reyihan was scared to death. He hurried to chasu city hospital to see Cheng Hong.

The etiology of hysteromyoma is still unclear, which may involve the cell mutation of normal muscle layer and the complex interaction between sex hormones and local growth factors. In addition, ovarian function and hormone metabolism are controlled and regulated by the high-level nerve center, so the activity of nerve center may also play an important role in the pathogenesis of hysteromyoma. Uterine fibroids are more common in women of childbearing age, widowed and uncoordinated sexual life. Chronic pelvic congestion caused by long-term sexual life disorder may also be one of the causes of hysteromyoma. In conclusion, the occurrence and development of hysteromyoma may be the result of multiple factors.

"Why do you have to keep the uterus?" Cheng Hong looked at the checklist of re Yihan and asked.

"A house without dolls, I'm still a woman!" Hot Yihan looked at Cheng Hong incomprehensibly.

"Well, you can keep it. Can't this operation be done in Kazakhstan?"

"Ah! The doctor over there is not responsible. One of my employees went to the steel plate for a car accident fracture. As a result, the hospital doctor said to cut the leg! I can't get the bone! It's terrible! "

"Hehe, OK! Then you'll be hospitalized. We're going to operate on you. "

"OK! Thank you, director Cheng! " Having said that, hot Yihan left with his fat ass.

Kazakh people like re Yihan come to the border to see doctors too much ~! Many years ago, they looked down on China, and now they envy it! Patients like them are the favorite of doctors in frontier hospitals. They can't use medical insurance if they have money.

And those who can come abroad to see a doctor are people with good economic conditions, Bayi! In the words of these people, what is easy to use, money is not a problem.
