

## Chapter 132: [My Genes Evolve Infinitely](#)

### HORRIBLE MECHANICAL CONTROL

Compared with the light of obsidian, the defensive ability of the white jade spirit body has doubled again.

Even, the white jade spirit body itself is compatible with spiritual power, and absorbs spiritual power faster.

This may be a very powerful ability for other genetic warriors.

After all, for genetic warriors, the absorption speed of spiritual power is the main factor that restricts them from improving their cultivation.

But for Lu Yuan, absorbing spiritual energy is not just a matter of breathing?

For Lu Yuan, the main factor limiting his promotion is insufficient resources.

And even if the white jade spirit body doubles the speed at which Lu Yuan can absorb spiritual power, that is to make Lu Yuan absorb it from two seconds to one second.

One more second, it doesn't really matter.

Can only say that it might be useful in battle?

The recovery speed of spiritual power can be faster.

This is only the effect of combat skills, and the physical and mental enhancement effect brought by the Lord-level gene naturally does not need to be said. In all aspects, it is about five times higher than the Obsidian Light, which is an exaggerated increase.

Moreover, in addition to improving the maximum defensive physique, the increase in strength, agility, and even mental power have been greatly improved.

Obviously, the higher the quality of the transcendent gene, the more comprehensive the improvement, but only some of them are more prominent.

After the white jade spirit body has evolved, there are more than 70 million first-order spirit crystals in Lu Yuan's evolution cube.

Lu Yuan naturally didn't plan to stop like this.

He started to evolve again.

The goal this time is the 'seed of nature' gene.

After the evolution started, the pain this time was not as good as the time when the white jade spirit body was evolved just now.

After all, the white jade spirit body has improved Lu Yuan's physical body too much, and the gene chain has become more stable after receiving feedback. If it evolves again, the pressure on the body will naturally be less strong.

Nature Seed Evolution consumes less spiritual power than Obsidian Light, and only consumes about 20 million first-order spiritual crystals.

The evolution is completed, and the Nature Seed has also evolved to the lord level.

Lord-level combat skills: Touch of Nature

Compared with the Seed of Nature, the healing effect of Touch of Nature has once again improved a lot.

Not only that, Lu Yuan can even treat many people at the same time as long as he is willing, as long as he can bear his mental strength.

Similar to the physical improvement of the white jade spirit body, in addition to the original mental perception ability, the increase ratio of strength, defense and agility has also increased.

After was promoted to the lord level, Lu Yuan no longer continued to evolve these two genes.

The master-level gene chain can withstand the lord level gene is already at the limit, and if it goes on, the gene chain will collapse.

However, Lu Yuan still didn't stop.

He took out a blue ball of light.

Mechanical interference.

Lu Yuan finally plans to burn this extraordinary gene.

On the one hand, this place is in the mechanical ruins of El, and the opponents are basically mechanical beings. This extraordinary gene has a very powerful effect, which can be regarded as a magical skill.

On the other hand, the direction of this extraordinary gene is a bit special. Lu Yuan is a little curious about what will become of this gene after it has evolved.

Burning genes, Lu Yuan is already familiar with it.

After absorbing the extraordinary genes, the extraordinary genes began to fill the third blank gene chain, and then began to compile and fill the third gene chain.

There is pain, but there are two lord-level genes for the primer, which is not so severe.

Soon, the mechanical interference was burned by Lu Yuan.

After was burned, Lu Yuan entered into the white mist, the white mist surged, and a humanoid mechanical life five meters high appeared.

This is the surviving will of this extraordinary gene itself.

This mechanical life is black and gold, and the light of the mechanical eyes is golden yellow. It looks a little noble, completely different from the mechanical guard Lu Yuan encountered in the El Mechanical Ruins.

After the mechanical leader appeared, an epee appeared in his hand, roaring towards Lu Yuan.

The aura of was much stronger than Lu Yuan's encounter with all the mechanical leaders, even close to the level of the lord.

Unfortunately, he met Lu Yuan.

Lu Yuan's previous two extraordinary genes were both lord-level, plus the boss-level genes that are now burned.

'S own power is much stronger than this mechanical leader.

What's more, Lu Yuan still has genetic weapons ?

Mechanical Guardian's battle armor and heavy sword appeared on his body at the same time, and wisps of white jade light appeared on his body.

White jade spirit body.

After running the white jade spirit body combat skills, Lu Yuan's various aspects have improved a lot, and the most improved is still the defense ability, but other aspects have also been greatly improved.

His body disappeared in place, and a sword light flashed from the mechanical leader's will almost at the same time.

The mechanical leader's will was instantly cut into two pieces.

However, as a surviving will, the mechanical leader roared and reconnected his body.

It's a pity that he just connected, flashes of terrifying sword light, cutting the mechanical leader's will to pieces.

The will of the mechanical leader turned into fragments can no longer be condensed and formed, and eventually disappears.

Fusion is completely completed.

It seemed that this battle of will was extremely easy, but only Lu Yuan was able to do it with a monster whose transcendent gene in the front was stronger than the gene burned in the back.

If it is a genetic warrior who burns genes step by step, at the beginning, I am afraid that I can only suppress the will, then continue to improve his own strength, and then slowly eliminate this will completely.

Lu Yuan was in place in one step.

It can be imagined that in the future Lu Yuan will burn all genes in this state.

Unless he burns a powerful gene that exceeds his own.

The battle of will ends, and Lu Yuan's will returns to his body.

The mechanical interference gene was completely burned, and a powerful force emerged from the gene, and all aspects of Lu Yuan improved again.

This time, Lu Yuan was a little surprised that the improvement in all aspects of strength, defense, agility and spirit was almost the same.

Moreover, the boosting effect is quite good, even reaching the second-level strength boosting effect of the white jade spirit body boost.

Lu Yuan was a little stunned, the gene for mechanical interference is a bit strong.

Although the applicability of mechanical interference is a bit narrow, for Lu Yuan, it is only a basic improvement.

Before the genes were burned, Lu Yuan had already understood the general effect of this mechanical interference, so there was no need to find a mechanical life to try it out.

With his current mental abilities, the mechanical life of the same level of mental enhancement type might be disturbed by him.

Unless it is a special mechanical life with immune interference ability.

Luyuan started to use Evolution Cube again, and began to evolve mechanical interference genes.

Strands of blue light merged into the third gene chain, and massive spiritual power was consumed.

This consumption rate made Lu Yuan's eyes widened, a little shocked.

is even more exaggerated than when the white jade spirit body was evolved before.

In the end, the spiritual power equivalent to more than 50 million first-order spiritual crystals in the Evolution Cube of the Continental Edge was almost exhausted, and the evolution of mechanical interference was finally completed.

### Combat Skills: Mechanical Control

After understanding the effect of this combat technique through the feedback from Lu Yuan through the gene chain itself, he couldn't help his eyes widening and his expression was shocked.

This combat skill, in a sense, is too powerful.

Mechanical control, as the name implies, is to control machinery.

If faced with a mechanical life whose mental power is weaker than him, he can directly control the behavior of the mechanical life, and even make the mechanical life self-destruct.

This is equivalent to directly grasping the life and death of the opponent.

If the mental power of the mechanical life is stronger than him, then he can also interfere with the opponent.

can interfere with the specific extent, it depends on the spiritual power gap between the two sides.

If the opponent's mental power far exceeds Lu Yuan, Lu Yuan will force himself to interfere with him.

Lu Yuan needs to grasp this point.

In addition, in addition to mechanical life, general mechanical creation, as long as it is not immune to this kind of control ability, or if it is of a

particularly high level, Lu Yuan can also achieve a certain degree of control.

It can be said that Lu Yuan, who possesses the combat skill of mechanical control, faces a mechanical life that is not much different from his strength, as if he is the real lord of the opponent, and the opponent's life belongs to the lord of Lu Yuan.

too strong.

Lu Yuan himself was a little shocked.

It is a pity that it is only effective for mechanical life. If it is effective for ordinary life, it would be outrageous.

Lu Yuan sighed.

But he couldn't help but smile afterwards.

This is a bit too greedy.

Although this combat technique has no effect on ordinary lives, the improvements in all aspects brought by Lord-level genes are real.

As long as Lu Yuan refines all these three lord genes to perfection, his abilities in all aspects will be doubled to about three times higher than that of lord-level warriors with only one lord-level gene.

Such a gap made Lu Yuan a very terrifying existence among the Lord-level fighters.

Of course, that was because he had to thoroughly refine the three genes.

Now, because he has just completed the evolution, the level of refinement of the three genes is not yet complete.

The most refined is the second lord gene, the touch of nature.

After all, before the evolution, the Touch of Nature had been refined to the leader-level Consummation, and after the evolution, the level of refinement was still a little more than 20%.

The one with the lowest level of refinement is the third lord gene, which is mechanically controlled.

The white jade spirit body had been tempered to the boss level before somehow, and the mechanical control was not tempered at all.

These three lord-level genes are completely tempered again, don't know how many spirit crystals it will cost?

Lu Yuan has a tingling scalp.

According to Lu Yuan's previous experience in tempering various genes with extraordinary qualities, genes with different levels of complexity and strength will consume a little different spirit crystals, but in general, they still need to consume tens of thousands to millions. Spirit crystal of the same level.

The trainee warrior of rank zero corresponds to the spirit crystal of rank zero, which is also a normal-level transcendent gene.

The first-order warrior corresponds to the elite-level transcendent gene, the second-order warrior corresponds to the boss-level transcendent gene, the third-order warlord corresponds to the leader-level transcendent gene, and the fourth-order warlord corresponds to the lord-level transcendent gene.

The lord's gene tempering is complete, and it needs to consume tens of thousands to millions of Tier 4 spirit crystals.

1 Tier 4 Spirit Crystal is equal to 10 Tier 3 Spirit Crystals equal to 100 Tier 2 Spirit Crystals equal to 1000 Tier 1 Spirit Crystals.

He now has an enhanced spiritual power gene fluid equivalent to 20 million first-order spiritual crystals, converted into fourth-order spiritual crystals, equivalent to 20,000 fourth-order spiritual crystals?

Um.....

Lu Yuan suddenly felt her head hurt.

There are three lord-level transcendent genes.

Three times the lord gene, three times the consumption of spirit crystals, and three times the headache.

How long do you have to temper yourself? !

Lu Yuan felt like crying.

But thinking about the benefits, at the very least, even if he hasn't started tempering now, his combat power should be comparable to the general second-tier consummate leader-level fighter.

This is the power of the three lord-level genes.

Thinking of this, Lu Yuan was happy again.

Lu Yuan looked at the time, because he hadn't rested, the time for evolution was quite fast, and it has only passed more than ten hours.

He made an appointment with Amy to retreat for one day.

Just in time, I took advantage of this period of time to use these 1,000 bottles of enhanced spiritual power gene liquid.

Lu Yuan took out the enhanced spiritual power gene liquid and began to pour it into his mouth, basically one bottle every minute, without stopping.

Originally, Lu Yuan was able to absorb spiritual power at a faster rate, and coupled with the presence of a white jade spirit body, after the test, he found that his absorption rate of spiritual power increased to about three times the original, and the absorption rate was even faster.

And the lord-level gene chain itself absorbs spiritual power quickly, plus the strengthened spiritual power gene liquid itself is also easy to absorb, and it becomes like this.

One bottle of enhanced spiritual power gene liquid per minute is almost equivalent to the consumption of 10,000 first-order spiritual crystals in one minute.

Even if it was converted into a Tier 2 spirit crystal of the same level as Lu Yuan, it would consume 1,000 per minute.

This exaggerated absorption speed of spiritual power can make others cry with envy.

Of course, the terrifying rate of consumption of spiritual power made Lu Yuan, who was constantly pouring the genetic liquid for strengthening spiritual power, almost cried.

.....

Ten hours later, Lu Yuan's eye sockets were finally still moist.

One bottle of Spirit Strength Gene Liquid a minute, Lu Yuan drank it for ten hours without stopping.

Ten hours spent 600 bottles, almost 6 million first-order spiritual crystals, equivalent to 6000 fourth-order spiritual crystals.

In the end, the degree of refinement of his 'White Jade Spirit Body' gene chain has been increased from 8% to ~www.mtlnovel.com~ This is still a preliminary refinement. The higher the degree of refinement, the more spiritual crystals need to be consumed.

Lu Yuan felt that not a single 300,000 Tier 4 spirit crystal could not stand it at all, it could only be more, not less.

Lu Yuan, forgot to do a bit, it was a first-order spirit crystal equivalent to 300 million.

This is just a 'white jade spirit', with 'natural touch' and 'mechanical control'.

laughed to death, there is no way to temper.

If he hadn't been strong enough, Lu Yuan felt that he would have been crying now.

At this moment, Lu Yuan's 'White Jade Spirit Body' gene chain suddenly felt saturated, and Lu Yuan stopped.

The spiritual power contained in the enhanced spiritual power gene liquid is extremely easy to absorb. In addition, Lu Yuan has burned the lord gene, and the body is powerful, fed back into the gene chain, and it took ten hours to be saturated.

This can be regarded as a terrible thing.

The effect will be better if there is a gravity chamber collocation.

However, if there is a gravity room, his genetic liquid for strengthening spiritual power is not enough.

Lu Yuan originally thought that he had become rich overnight, but it turned out that the clown was still me ?

special...

Lu Yuan's eyes showed a firm look.

Continue to search the floating city and engage in genetic liquid for strengthening spiritual power.

Those who block me die!
