

Chapter 216: My Genes Evolve Infinitely

ROYAL SPIRIT SKILL, 1 YEAR

‘Business? What business?’

Lu Yuan looked at Si Tingyu with some doubts.

Si Tingyu smiled and said:

‘For the training of steel body, you have reached a bottleneck now. I plan to teach you something else... I have watched your battles before. Your combat skills tend to increase overall, and you have special bonuses to defenses. It also added strength and speed, and at the same time mastered space combat skills, right?’

Lu Yuan nodded: ‘Yes, tutor.’

‘If you are a guardian warrior who practices shield art in general, I will consider letting you continue to specialize your defense capabilities, but your route is very similar to mine. Under the premise of focusing on your own defense capabilities, you will also strengthen your offensive capabilities and combat effectiveness. More comprehensive and powerful. And your current combat skills lack a powerful offensive ability. I found from the family treasury a royal-level spiritual skill suitable for the use of heavy swords, which may be able to make up for your shortcomings.’

Secretary Tingyu explained.

When Lu Yuan heard this, he was a little surprised, and then moved a little in his heart.

Unexpectedly, Si Tingyu would deliberately search for his spiritual skills from the treasure house of their family.

And it's still royal.

In the final analysis, spiritual skills are the use of spiritual power, which is essentially a kind of combat skills.

But because the combat skills are all genetically armed, they seem to be instinctive, and they can be used handily without the need to practice, while spiritual skills need to be practiced day by day.

The imperial level spirit skills, the power is equivalent to the combat skills attached to the imperial level genes.

One can imagine how precious the emperor-level spiritual skills are.

‘This... the emperor-level spiritual skills are very precious, mentor, if you teach me this way, will it have any effect on you?’

Lu Yuan's heart was moved, but he didn't want to have any impact on Si Tingyu because of this.

After all, this is the tutor from the family, what if you can't teach it to outsiders?

Si Tingyu shook his head: ‘You are my student, I naturally have to teach you well, as long as you don't pass on spiritual skills, it will have no effect. Why? Are you unwilling to learn?’

‘Of course I do!’

Lu Yuan nodded. Since Si Tingyu said that there was no effect, Lu Yuan would naturally not refuse.

He said seriously: ‘Thank you mentor.’

With a smile on Si Tingyu’s face:

‘Let’s go, go to the underground training room.’

When he arrived in the underground training room, Si Tingyu took out an inheritance crystal and handed it to Lu Yuan:

‘This spiritual skill is in the crystal. I don’t use an epee. I don’t know how to use an epee, but I should be able to give you some pointers on the use of spiritual power and physical strength. You can take a look at the spirit first. Skills, ask me if I don’t understand, if I don’t understand, I will ask others and then teach you.’

Lu Yuan nodded earnestly, took the Emperor-level Spirit Skill that Si Tingyu handed over, and checked it.

This imperial spiritual skill is called Beng Tian Zhan. By compressing the spiritual power, and then using the physical skill to explode, it can cause terrifying destructive power. It is said that it can even cut through the space with a single sword.

The power is very strong, but the difficulty of cultivation is also very high.

The compression of spiritual power must be completed at the moment of swinging the sword, if it is not proficient, it will not be used at all.

In particular, it also needs to cooperate with physical skills, and the difficulty is even higher. It may take a long time to master it thoroughly.

Of course, if you are proficient in Bengtian Slash, it will not be much worse than Earth Spirit Body.

So Lu Yuan began to practice under Si Tingyu’s guidance.

One practice is one day.

In the evening, Lu Yuan had dinner at Si Tingyu's house before returning to the dormitory. On the way, he was surrounded by classmates he met again.

The next day after Lu Yuan finished his cultivation at Si Tingyu's house, Si Tingxue came out of the place of origin.

When he came to Si Tingyu's house, after seeing Lu Yuan, Si Tingxue congratulated Lu Yuan awkwardly on entering the Tianjiao list, and then asked Lu Yuan to compete with her. Obviously, she also wanted to make the top of the Tianjiao list.

Of course it was impossible for Lu Yuan to use his full strength, so he was just taking it as a pair of training with Si Tingxue, which could be used to practice the newly learned Beng Tian Zhan.

Because he wanted to compress his spiritual power when he attacked, Lu Yuan was a little uncomfortable, and his spiritual power was even in a state of disorder during the battle. On the contrary, his combat power was weakened, and he was able to fight with Si Tingxue.

In the next few days, Si Tingxue often went to Lu Yuan to learn from each other. Later, she got Rebecca and the two of them played with Lu Yuan together.

Lu Yuan's Beng Tian Zhan also slowly became proficient in the discussion.

Five days later.

Lu Yuan can return to the place of origin.

After he entered the land of origin, he came to the gravity room to practice.

This was Lu Yuan's first practice after he broke through to the Zhan Zun level and evolved his genes.

The training efficiency of the third-tier enhanced spiritual power gene fluid at the Zhan Zun level is still much higher than that of the fourth-tier spiritual crystal, and Lu Yuan still uses the spiritual power genetic fluid to practice.

As Lu Yuan's cultivation base was upgraded to the Battle Sovereign level, and the absorption efficiency of the Earth Spirit Body was several times higher than that of the White Jade Spirit Body, the absorption efficiency of the Spirit Power Gene Liquid was naturally much higher.

In the warlord's time, almost 400 fifth-order spiritual crystals can be absorbed in one hour, but now, Lu Yuan can absorb 400 sixth-order spiritual crystals in one hour, which is about ten times higher.

This is all the powerful spiritual energy absorption efficiency brought by the earth spirit body. If not, the tempering effect of absorbing the third-order enhanced spiritual power gene liquid by the warlord class is definitely not as good as the warlord class, which can be increased by four or five times. It's very high.

When Lu Yuan was tempering the king-level genes before, he consumed a total of about 10 million Tier 5 spirit crystals.

His original spiritual power gene liquid was equivalent to more than 60 million fifth-order spiritual crystals, which consumed about 10 million, and there were more than 50 million fifth-order spiritual crystals, which was equivalent to five million sixth-order spiritual crystals. Lingjing.

With these spirit crystals, Lu Yuan felt that he should be able to refine two or three imperial genes to completion.

If it is not enough, then he can go to the El Mechanical Relics again at that time, and then get a batch of Tier 3 strengthening spiritual power gene liquid.

After breaking through to Zhan Zun, Lu Yuan can stay in the place of origin for more time.

After fifty-two days, Lu Yuan left the place of origin.

In these fifty-two days, Lu Yuan absorbed about two hundred and forty thousand sixth-order spirit crystals to refine the earth spirit body. After the 240,000 sixth-order spirit crystals went down, the tempering degree of the earth spirit body reached 28. %.

Based on Lu Yuan's experience in tempering so many extraordinary genes, it would take more than one million sixth-order spirit crystals to complete the tempering of the earth spirit body.

This is within the acceptable range of Luyuan.

If he could maintain this speed, Lu Yuan's cultivation at the Zhan Zun level would still be very fast.

Each imperial gene can be completed by entering the place of origin six or seven times. According to the time that the warlord-level can stay in the place of origin and the real world, it takes about ten days to enter the place of origin at one time, and it takes about six times. It is equivalent to about two months.

He now has five imperial genes, can he refine all genes to perfection in almost ten months?

Of course, this is calculated according to the most ideal situation. For transcendent genes like the Gate of Space and the King of Machines, if

they want to refine them to perfection, they need more spirit crystals and naturally consume more time.

It would take more than a year for Lu Yuan to refine all the five emperor-level genes to completion.

This speed can be regarded as extremely fast.

You know, if you can break through to the Zun Zun level within six academic years in the genius camp, you will even have graduated successfully.

And Lu Yuan's ability to break through to the King of War level within two years of enrollment was an exaggerated rate of improvement.

By that time, Lu Yuan was only about 20 years old.

Breaking through to the King of War at the age of twenty, Sister Qinghe and her mentor back then were only at this speed.

However, their awakening time was earlier than Lu Yuan, and they awakened at the age of sixteen.

And Lu Yuan is eighteen years old.

In fact, Lu Yuan had two years less training time than they did.

Now Lu Yuan's headache is that as his cultivation level continues to improve, every time he evolves the extraordinary genes, he must fill up his original tempering degree. It may take longer and longer, and the time to break through may also be. Will increase.

It takes so long to be at the Emperor level now, can it wait for the Emperor Level gene, the Saint Level gene, or even the God Level gene?

Lu Yuan felt a little big head.

This is because his spiritual energy absorption speed is fast enough. If it is changed to another genius, how can it be possible to absorb 400 sixth-order spiritual crystals in an hour at the Zhan Zun level?

It is good enough to absorb four.

And there is a big problem. He has enough training resources at the Battle-sovereign level. However, according to this trend, he has exhausted the resources of the entire relic world of El Mechanical Ruins, so that he can gather the training resources of the Warlord level. .

What should I do when I reach the Battle Emperor level?

Where can I find the cultivation resources at that time?

According to his evolutionary trend, at the Battle King level, his genes are all Emperor Level genes, and at the Battle Emperor level, his genes are all Saint Level genes.

There are a total of seven Zhan Sovereign genes, and the refinement resources of the seven Saint Grade genes are more than the training resources of the Zhan Sage, right?

Lu Yuan had a tingling scalp.

When his cultivation reaches the Battle Emperor level, he needs the training resources of others at the Battle Saint level. This pressure is not what he should bear at this stage, okay?

Lu Yuan thought for a long time, and the more he wanted to feel that in the future he was short of spirit crystals.

Of course, there is another way, and that is to give up a large part of the evolutionary genes, and mainly improve the cultivation base first.

After the cultivation level is promoted to the God of War, other genes will be evolved.

This method can make the cultivation base increase faster, but the combat power will definitely be weaker.

If he hadn't challenged the list, Lu Yuan wouldn't mind raising his cultivation first.

But just the 98th in the Tianjiao list, there is such a generous reward, how rich will the rewards of the king rank list, the imperial rank list, the emperor rank and even the holy rank list be?

Naturally, Lu Yuan hoped to make the list and win the resources inside.

Lu Yuan sighed, feeling a little difficult.

For the next time, Lu Yuan's life was stable.

When I was in the Land of Origin, I tempered my genes in the gravity room.

Si Tingxue is generally practising, and it is very difficult for Lu Yuan to take her out to play, unless she is used as bait to accompany her to learn more games in the future.

Lu Yuan also remembered the words of his instructor, so that Si Tingxue should not be so tired, so as not to get tired in time.

As for Rebecca, the salted fish is very, every time she is forcibly pulled by Si Tingxue to practice together.

Lu Yuan asked them to play, and of course she raised her hands and feet to agree.

And sometimes Lu Yuan would go to Amy to play.

It's a pity that Amy was watched by Wang Lingling, and she was busy cultivating at ordinary times. After looking for her ten times, only one or two could come out to play.

Otherwise, Lu Yuan would go to find and learn every night.

Ye Ye's challenge on the Tianjiao list went smoothly, winning streak all the way, and quickly rushed to 74th place.

From Ye Ye, Lu Yuan also knows the types of rewards on the list, from rough stones that break the genetic lock, to royal-level genetic weapons and king-level transcendent genes suitable for him, to various treasures that increase the speed of cultivation, and so on. This kind of stuff has everything.

Every time you rush to a higher ranking, there will be a certain resource reward, and the richness of this reward is directly proportional to the promotion of the ranking.

If you promote one place each time, the rewards will be less, and every time you promote three places, you will be rewarded more. And so on, the more you raise the ranking each time, the more rewarding things will be.

This also allowed Lu Yuan to dispel the idea of scoring resources every time he was promoted one rank.

Although the various rewards Ye Ye received made Lu Yuan feel very greedy, Lu Yuan didn't continue to rush after rushing once.

He intends to wait until the four imperial genes in front of him have been tempered to completion before starting to make the list.

Then the speed will be faster.

He does not intend to waste too much time on the Tianjiao list.

Isn't it okay to have this time to practice hard?

The same as Lu Yuan expected.

After more than two months, Lu Yuan consumed more than 1.6 million sixth-order spirit crystals, finally tempering the earth spirit body to completion.

This consumption made Lu Yuan feel a bit toothache.

He now has more than three million cultivation resources in his hands. He feels that maybe it will only be enough for him to temper the tide of life.

When he first began to refine the life tide, Lu Yuan estimated the consumption, and found that the spirit crystal needed by the life tide was a little higher than the earth spirit body ~ www.mtlnovel.com ~ but it was not much higher.

It's roughly equivalent to about 1.7 million to 1.8 million.

However, because of the remaining temperament during the previous Light of Life, Lu Yuan probably needs to consume 1.4,500,000 sixth-order spiritual crystals.

Lu Yuan was still practicing with peace of mind.

After Lu Yuan tempered the earth spirit body to perfection, the time he could stay in the place of origin was extended to fifty-seven days.

The training time has once again become longer.

Two months later, Lu Yuan spent close to 1.5 million Tier 6 spirit crystals, finally tempering the life tide gene to completion.

By now, Lu Yuan still had about 1.8 million sixth-order spirit crystals left in his cultivation resources.

And he tempered the King of Machinery, estimated the consumption, and it took about 2.3 million sixth-order spirit crystals to complete the tempering.

However, because of the residual tempering degree before, it would take about two million sixth-order spirit crystals to do it.

The cultivation resources in Lu Yuan's hands weren't enough.

So he once again went to the El Mechanical Ruins, and after sweeping one-tenth of the core area of the central floating city, Lu Yuan obtained a third-order enhanced spiritual power gene liquid that was almost equivalent to six million sixth-order spiritual crystals.

Then he continued to refine.

Three months later, Lu Yuan finally tempered the supernatural gene of the king of machinery to the point of completion.

Up to now, Lu Yuan had tempered the three imperial genes to perfection, and two imperial genes, the gate of space and the sacred light, remained. After the tempering, Lu Yuan could break through.

However, not long after Lu Yuangang had finished tempering the King of Machinery, it was the annual harvest day, and the school was closed.

When Lu Yuan heard the news of the holiday, he was still in a daze. He spent most of his time in cultivation. He didn't expect that a year would have passed so soon.
