

## Chapter 275: My Genes Evolve Infinitely

### **BREAK THROUGH THE EMPEROR OF WAR, HOLY GENE**

Lu Yuan thought of this, and said with a smile: ‘Since Father Adams is going to ask War Saint for help, there shouldn’t be any big problems. Amy, don’t worry, it’s okay.’

Amy was a little worried because she heard what Adams said before, and she felt much better when she heard Lu Yuan’s comfort.

She nodded slightly, and soon showed a happy smile: ‘Big liar, I have broken through to the King of War!’

Hearing this, Lu Yuan nodded silently, showing a kind smile: ‘Oh, yes, I am planning to break through to the Emperor of War.’

Amy: ‘ ????’

The smile on her face froze.

‘How can you be so fast?’

Amy couldn’t believe it, and then Lu Yuan saw Wang Lingling’s face sticking out behind Amy, his face full of gentle smile with a hint of surprise.

She was no less shocked than Amy.

Lu Yuan glanced at Wang Lingling, knowing that she might have been listening around.

Lu Yuan smiled and said: ‘Maybe I have been working harder recently. As you all know, you can get a lot of training resources and rough stones for breakthroughs after rushing to the list, and cultivation will become easier.’

Hearing this, Amy pursed her small mouth slightly: ‘Humph! I can also be on the top of the list!’

After absorbing the spirit fruit that Lu Yuan gave to improve the body and spirit, plus blessing some powerful genetic weapons, Amy’s current strength is not weak. After breaking through to the king level, you can also try to burn the king level gene. Yes, as long as you work hard at that time, it will not be too difficult to be on the list of kings.

Lu Yuan smiled and said, ‘Then you have to work hard and practice hard.’

‘I know, if you want to come out and play or a big liar, I just finished my practice.’

Amy looked expectantly at Lu Yuan.

Hearing this, Lu Yuan shook his head: ‘My practice time today hasn’t arrived, so I have to practice first.’

Amy showed a hint of disappointment, but she also understood that the daily practice time should be well practiced. She nodded: ‘Oh, then you should practice first.’

Lu Yuan and Amy bid farewell, cut off the communication, stopped staying at the auction house, and left the auction house, planning to rent a house to break through.

On the way, Lu Yuan received news from Si Tingxue and Rebecca, which was also about the alienated fierce beast that Amy said before. Only then did Lu Yuan know that Siqi and Li Xinghai had also gone.

This also allowed Lu Yuan to better understand the power of the alienated fierce beast, and wanted to make a breakthrough quickly and improve his combat power after evolving the super gene.

After returning to the renting house, Lu Yuan went straight to the bathtub about two meters in radius and sat cross-legged, and then began to absorb the rough stone.

After absorbing the rough stone, a strong spiritual force surged into the gene lock, breaking the gene lock one by one.

There are more than one hundred and fifty genetic chains, and it takes a long time just to break the genetic chains.

When all the genetic chains were broken, the next genetic chain that had previously been shrouded in white mist was revealed.

That is the seventh gene chain, the gene chain of the Emperor of War.

At the same time, the joy of life sublimation spread from Lu Yuan's body, and all aspects of strength have been greatly improved.

So far, Lu Yuan broke through to the Battle Emperor level.

Because he was worried about the alienated fierce beast, Lu Yuan didn't rest too much, and began to evolve extraordinary genes.

Lu Yuan had already charged 80 million seventh-order spirit crystals into the Evolution Cube before. At this moment, the Evolution Cube was flashing with a blue light, and under Lu Yuan's will, it was shot into Lu Yuan's genetic chain.

The gene chain began to change drastically, and Lu Yuan's physical body also changed, and his body burst into wounds, blood spurted, and the bathtub was dyed red.

However, with the recovery ability of the Great Sun Spirit Body and Life Aria, Lu Yuan's wounds squirmed and soon began to recover.

Time passed, when the first gene chain change ended, the blue light of the Evolution Cube was no longer shining, and the evolution of Lu Yuan's first extraordinary gene was completed.

The emperor-level transcendent gene Dasun spirit body has completed its evolution and has become a saint-level transcendent gene.

Extraordinary genes seemed to have instinctive information directly into Lu Yuan's mind, and Lu Yuan immediately understood the situation of the newly evolved extraordinary genes.

Saint-level transcendent gene, the body of the stars.

Compared with the Great Sun Spirit Body, the various aspects of the Astral Body, the extraordinary gene itself, have been greatly enhanced, mainly in defense and strength, and secondly, agility, and even a considerable degree of mental power.

In addition, unlike the Great Sun Spirit Body, the Great Sun Spirit Body needs to be in a place with sunlight to greatly increase its recovery ability and strength, while the Star Body is not in space as long as it is in the universe where the power of the stars is located. Within the fissure, all aspects of strength can be improved, and at the same time, physical recovery ability and spiritual recovery ability can be improved.

The increase brought by the rotation of the celestial body is naturally much stronger than the great sun spirit body.

At the same time, just as Lu Yuan thought before, the power control inheritance contained in the Saint-level transcendent gene itself has become more in-depth. For the control of the earth, rock, and metal, the body of the stars is much stronger than the spirit body of the sun. Even the control of gravity has been greatly improved, and the ability of gravitation and repulsion has also been derived.

The movement between stars, in the final analysis, is the attraction of large masses with each other, and it is relatively not difficult to reverse it into repulsive force.

In general, the body of the stars is much stronger than the spirit body of the sun, and this gap is greater than the gap between the emperor and the emperor.

It has to be said that the stronger the transcendent gene, the more exaggerated the improvement it will bring to the gene warrior after burning.

Lu Yuan felt that after he had evolved all of his transcendent genes to Saint Grade, his strength might be stronger than he expected.

This is naturally a good thing.

When Lu Yuan checked the information of the body of stars, the hideous wounds on his body responded one by one. Lu Yuan stood up, washed the blood from his body, and washed the blood in the bathtub, and then rested for a while, regaining his spirit. After that, it started to evolve again.

The second evolution, the emperor-level transcendent gene life chants.

Compared to when he first evolved, Lu Yuan's physical body was much stronger, relatively speaking, the pain was a lot less, and the wounds on his body were much less than before.

Lu Yuan quickly completed the evolution.

Holy-level transcendent gene, gift of life.

It is also an extraordinary gene of the Healing Element. Compared with the Aria of Life, the gift of life is almost the same as the name of the combat skill. As long as it is not completely dead, even the spirit is annihilated, and this combat skill can be saved.

Seeing this information, Lu Yuan widened his eyes slightly and was a little surprised. This is equivalent to having countless lives, right?

As long as there is enough spiritual power, no matter how severe the injury, can he recover as quickly as possible? Rebirth from a severed limb is completely a routine operation.

Even if the spirit is still there, even if it is rebirth, it may not be impossible, right?

This is a bit scary.

Lu Yuan discovered that this combat skill was even stronger than Lu Yuan thought.

Of course, after evolving to the holy level. The amplification effect brought by the blessing of the extraordinary gene is much stronger than that of the emperor, and the inheritance knowledge contained in the extraordinary gene is also more profound.

There is a deeper understanding and application of the force of life and the force of nature.

Even if Lu Yuan didn't use combat skills, he could easily use the force of life to heal others, use the force of nature to make flowers and trees grow vigorously, and even use it to deal with his own enemies.

Lu Yuan discovered that with the continuous improvement of the quality of the transcendent gene, the knowledge contained in the transcendent gene became more and more similar to the authority of the direction represented by this gene.

The holy level is so powerful, when it is promoted to the **\* level, it will truly resemble a \*** who can use the law, right?

That combat technique can't even be said to be a combat technique, but a magical technique.

This is naturally a good thing for Lu Yuan. After all, he can have the power of laws in several directions and possess a lot of magical skills.

Continue to evolve, surpass the \*\* level, and even stronger than the gods.

Lu Yuan used a gift of life for himself, and the slowly healed wound left over from the previous evolution was completely healed almost instantly, and Lu Yuan almost didn't react.

After recovering, Lu Yuan washed the blood off again, regained his spirit, and started his third evolution.

The third emperor-level transcendent gene, the mechanical emperor.

The faint blue light of evolution cube once again enveloped the gene chain, and the gene chain began to change.

Having evolved two Saint-level genes in a row, Lu Yuan's body is already extremely powerful. Although Lu Yuan can still feel the pain, it is already milder than the second time before. The wounds on his body have once again reduced, and there is almost only a little trauma. NS.

The evolution soon ended, the blue light dissipated, and Lu Yuan received the information of a new extraordinary gene.

Saint-level transcendent gene, mechanical saint.

Needless to say, the improvements brought by the extraordinary genes to all aspects of the genetic warriors.

The ability to control mechanical life becomes stronger, and even as long as Lu Yuan's mental power is strong enough, even the mechanical life of the saint level may not be unable to control it.

This makes Lu Yuan a little unbelievable, this is a saint.

In the entire universe, he is also regarded as an absolute powerhouse. Apart from the \*\* of war, the saint is the ceiling of combat power.

Unexpectedly, even the saint can control it.

Lu Yuan wanted to go to the leader of the mechanical race to find a few mechanical saints to try.

However, Lu Yuan felt that if he tried, he might be slapped to death by the Mechanical God of War.

The anomaly of the saint is no longer a trivial matter, and it will definitely attract the attention of the mechanical war god.

In addition to the control ability, the inheritance of the mechanical technology field is also quite advanced. As long as the materials are sufficient, the land edge can even transform into a space warship that can jump in space.

After thinking about it this way, Lu Yuan suddenly thought that if the holy-class alienated fierce beast really couldn't handle it by then, building a few more battleships to escape might not be a retreat.

Of course, Lu Yuan definitely didn't want to give up Daqixing if he could.

In addition, the mechanical saint's increase in mechanical gene weapons and mechanical weapons has also been greatly strengthened compared to the time of the mechanical emperor.

Lu Yuan thought for a while, and planned to create a batch of genetic weapons of the floating artillery type at that time, and then evolve to Saint-level, and then use the mechanical increase to increase it, which will also greatly improve his combat power.

If the burden of evolving to the holy level is heavier, maybe you can consider evolving to the emperor level only. If the emperor level uses mechanical amplification to increase, the destructive power is not much worse than that of the holy level.

This is also a good method.

Lu Yuan remembered it in his heart, planning to try it later.

If that alienated fierce beast really comes out, it can be improved a little.

Lu Yuan came back to his senses and found that the wounds on his body he had previously caused by evolution had healed automatically. He cleaned it, regained his spirit, and began to evolve the next extraordinary gene.

The fourth transcendent gene, the emperor-level transcendent gene, roams the stars.

Compared with other transcendent genes, the space system transcendent gene has the greatest improvement. Of course, evolution requires the most resources. It consumes about 8 million seventh-order spiritual crystals, and Lu Yuan makes this extraordinary. The genes have evolved to the holy level.

During this process, Lu Yuan could hardly feel much pain. He just felt a little tingling, and no more wounds appeared on his body.

Lu Yuan began to check the information on the extraordinary gene.

Holy-level transcendent gene, spacewalker.

Compared with the emperor-class starry sky roaming, the spacewalker's improvement needless to say, the magnitude is huge.

The ability of combat skills is the same as roaming in the starry sky, and it is also a space shuttle.

However, unlike the starry sky roaming, the spacewalker has a more powerful affinity for space. Just like the name of this extraordinary gene, it seems that people walking in space can use this combat technique to integrate into space by themselves. Generally, they are slightly lower-level. Owners of extraordinary genes in the space system can't even perceive spatial fluctuations.

This made Lu Yuan feel a bit similar to the previous Black Abyss Demon Gate.

But it is definitely different from the alien.

There is no difference between a spacewalker in space travel and a normal space, so there will be no delay. With the spacewalker's extraordinary genes, Luyuan can do as flexible as in a normal space.

Even the imprisonment of space can hardly affect him, because even the imprisoned space is the same as the normal space for him.

With this extraordinary gene, Lu Yuan can say that there is no place he can't go.

Lu Yuan looked at the introduction, and the more he looked at it, the more shocked he became. No wonder there are so few strong people with extraordinary genes in the space system.

If anyone has the extraordinary gene of Spacewalker, even if it is just a warlord, Lu Yuan can't help him.

Maybe he can't hurt Lu Yuan, but it's hard for Lu Yuan to hurt him~[www.mtlnovel.com](http://www.mtlnovel.com)~ I don't know if Spacewalker can cross the barrier of that kind of law. If he can, then even the God of War will take Lu Yuan. no solution anymore.

Lu Yuan wanted to try, but if it didn't work, wouldn't it be cool?

Hmm... it's better not to have the chance to try it.

Lu Yuan exhaled slightly.

In addition, in the room, the inheritance knowledge contained in the extraordinary genes of Spacewalker is also quite profound, and the use and control of the power of space has taken a new step.

Lu Yuan can use the power of space to create a lot of pretty good combat skills, whether it is to plant a space bomb in some places and detonate it when someone passes by, or use space to fold and stealth are all good ideas.

And because of the special nature of the space system's extraordinary genes, although the combat skills created by Lu Yuan may be the highest in quality, they are only at the Emperor level, but even if they face the battle saints, they are of great use. This is Lu Yuan's most satisfying point. .

After Lu Yuan checked the information on the extraordinary genes of the Spacewalker, he sighed slightly, suppressed the excitement in his heart, and then rested for a while to begin the next evolution.
