

Chapter 81: My Genes Evolve Infinitely

2 BOSS-LEVEL GENES

Like the body of black iron, the light of red bronze can also greatly improve the defense, and at the same time, it can also increase a certain amount of strength and agility.

And the increase rate is much stronger than the body of black iron.

just evolving to the light of red copper, coupled with breaking the gene lock, Lu Yuan's aspects at this moment have been improved by almost four times compared to the original.

This is just an increase in physical strength in all aspects. If it is converted into combat power, more than four times?

The original Lu Yuan, even if ten tied together, is not his current opponent.

If you use combat skills, the improvement is even greater.

Lu Yuan was full of surprises.

Is this the power of the boss-level transcendent gene?

But this is not the end.

Lu Yuan took out the extraordinary gene of natural recovery.

After breaking through to the first level, the second gene chain appears, and the second extraordinary gene can be burned.

Lu Yuan's mind moved, and the white light cluster turned into a streamer, which merged into Lu Yuan's body.

Inside the light cluster, strange lines pass through the white fog and enter the blank area in the gene chain.

The singular lines constantly change shape and start to repair the blank areas.

With the repair, Lu Yuan's body became stronger again.

He felt that his spirit had become a lot cooler, his body had become tougher, and his muscles had become tighter.

Because it is an ordinary-level transcendent gene, for Lu Yuan's current physical strength, the process of burning can only feel a little tingling, which is completely different from the sharp pain of burning petrified skin for the first time.

Time passed, the blank gene chain was filled, and the remaining strange lines merged into other areas of this gene chain, and began to fine-tune other areas.

It didn't take long for the strange lines to be completely absorbed.

The final step to burn the extraordinary genes has come.

Lu Yuan's consciousness was in a trance and appeared in the white mist.

The white mist surged, and a tree man with a green canopy, about one meter high, with hands and feet, appeared in front of him.

This is the natural will of the creature that has not completely dissipated because of the natural regeneration gene.

This extraordinary gene is the gene of this tree man.

Because the natural regenerating genes burned by Lu Yuan are of ordinary quality, this treant is naturally also an ordinary beast.

is the same level as Lu Yuan, both have just broken through to the first level.

However, for Lu Yuan, the first transcendent gene to have evolved to the boss level, the ordinary beasts of the same level are not threatening at all.

The tree man who just appeared will open his mouth to Lu Yuan and roar silently.

Lu Yuan's body turned into a stream of light, and it had appeared before the Shuren's will.

He held the beetle claw epee in his hand, and the sword light appeared, completely covering the will of the tree man.

In just a few breaths, the tree man's will was completely shattered and turned into a light spot to dissipate.

A mass of white light is integrated into the second segment of Lu Yuan's gene chain.

An extremely comfortable warm feeling reappeared in Lu Yuan's body, and at the same time, a powerful force emerged from the depths of Lu Yuan's body.

The burning of the second gene chain is completely completed, and Lu Yuan's life has been sublimated again.

Lu Yuan opened his eyes, feeling the changes in his body.

The improvement brought by the burning of natural recovery is mainly in the spiritual aspect, in addition, it also improves a certain degree of defense ability.

This may be because this extraordinary gene comes from the tree man.

The defensive ability of the tree people is generally pretty good.

For Lu Yuan, being able to superimpose defenses is naturally a good thing.

This extraordinary gene is of ordinary quality after all, and the improvement effect brought by burning is only about one-tenth of the light of red copper.

can be said to be quite weak.

Lu Yuan didn't particularly care about this, anyway, it could evolve.

Lu Yuan glanced at the Evolution Cube, which was still flashing with a blue light, hesitated, but still did not evolve directly.

Before breaking the genetic lock, it was the body of the evolutionary black iron, and it was the natural recovery that was burned.

Although he doesn't feel very tired physically, he is very tired in spirit.

Lu Yuan intends to rest first before continuing to evolve.

Now, take a nap and regain your energy.

Lu Yuan went to take a shower, washing away the cold sweat that had been painful when he evolved the body of black iron.

After was refreshed, he threw himself on the bed and fell asleep.

I don't know how long I slept, Lu Yuan opened his eyes, and he felt that he was very energetic, and his fatigue had disappeared completely.

His condition is restored to its best time.

Lu Yuan only then began to evolve again.

The evolutionary cube that revolves around the gene chain has a ray of blue light integrated into the second gene chain.

The sequence of genes began to change under the power of evolution, and evolution began.

A tingling sensation spread across Lu Yuan's body.

Judging from Lu Yuan's current physical strength, even if he evolved from an ordinary level to an elite level, it would not have much impact on him.

Time passed, the blue light slowly dissipated, the evolution was completed, and more powerful power emerged in Lu Yuan's body again.

instinctively reminded him of the news of combat skills after evolution.

Combat Technique: Wood Therapy.

is the same as natural recovery, it is also a healing technique.

The difference is that the healing effect of wood therapy is much better than that of natural recovery.

In the case of using the same spiritual power, wood healing can heal more serious injuries, it will take less time, and the effect is almost twice that of natural recovery.

Similarly, the extraordinary genes after the evolution are mainly to enhance the spirit, and in addition to the defense, it also enhances a lot of power.

The effect of improvement has doubled compared to before the evolution.

Although the effects of the elite-level genes are already very good, Lu Yuan would naturally not be so satisfied.

He still needs to continue to evolve.

Fortunately, before Lu Yuan spent a lot of spirit crystals to charge the Evolution Cube, otherwise, it really may not be able to support such continuous evolution.

Lu Yuan glanced at the Evolution Cube, which was still flashing with a blue light, and his mind moved, and the third evolution began.

Click, click...

With the evolution of genes, the bones and flesh of Luyuan's whole body shattered and reorganized, and the intense pain flooded Luyuan like a tide.

Lu Yuan's face turned pale, cold sweat broke out all over his body.

However, he couldn't help but feel a little surprised in his heart.

The pain that evolves this time is not as good as the pain that Lu Yuan had evolved from the body of black iron to the light of copper.

Lu Yuan can also understand.

After all, Lu Yuan's current physical strength is much stronger than before.

Even so, Lu Yuan still felt a continuous pain.

I have to come every time I evolve, it's too difficult.

Lu Yuan couldn't help but complain, just to evolve and become stronger, what can he do?

can only endure it.

Time passed, the pain slowly dissipated, and the blue light inside the Evolution Cube became much dim.

And evolution has also been completed.

Lu Yuan glanced at the evolution cube, which had become somewhat transparent, and couldn't help but feel a little pain.

He had filled nearly a hundred thousand spirit crystals before, but he didn't expect to consume it so quickly.

The second evolution to the boss level~www.mtlnovel.com~ The evolution cube consumes more energy than the first evolution.

is not only evolving to boss level, but also when evolving to elite level.

Lu Yuan is a little skeptical, because now Lu Yuan has broken through to the first order, there are two gene chains, and evolution may become a little more difficult.

But the process finally went smoothly.

Lu Yuan excitedly checked the newly evolved extraordinary gene.

Combat Technique: Rejuvenation.

is also a healing technique.

The specific therapeutic effect, Lu Yuan has not had time to try.

However, it is only the increase brought by the extraordinary gene, which is about three times higher than the previous elite gene.

The main improvement is naturally the spirit, and the secondary improvement of the power and defense has also been greatly improved, and even a small amount of agility has been improved.

has obtained two boss-level genes in a row, and the power in the marginal body is like magma, which may boil and erupt at any time.

Lu Yuan got up from the bed, clenched his fists, and punched the air.

Boom!!

The air wave surged, forming a strong wind in the room. The sofa beside it was blown laterally by the strong wind for a certain distance and hit the wall hard.

Feeling the powerful force, the corners of Lu Yuan's mouth raised, showing an excited smile.

Compared to before the advancement, Lu Yuan's strength at this moment has improved too much.

The specific combat power, he can't estimate, it's just the improvement in various aspects, each of which has more than five times.

He only knew that if he encountered the leader of the ancient sea giant crocodile he had encountered before, he might not be able to stop Lu Yuan from punching.

Just don't know how it compares to that catwoman Ye Ye?

Lu Yuan was a little curious, after all, Ye Ye was already the strongest genetic warrior he had ever seen.
