

The Return of the God of War [The Protector] Chapter 2687

Next, Levi Garrison would pay more attention.

There are definitely traitors among them.

Levi Garrison did not return to Kunlun College, but went straight to the Maya Industrial Headquarters.

After I arrived, I asked the headquarters to come up with the data of all the experimental projects as the dark god.

It now appears that the technology owned by Maya Industry is still an experimental project, which was deliberately done by the Gods Laboratory.

Maya Industry came to carry out some small experiments, and obtained data for the Gods Laboratory.

...

It took a long time for Levi Garrison to go through all the experiments of Maya Industry.

Then analyze them one by one.

Look at the most likely kind of experiment that has something to do with the plan of the Lab of the Gods...

“Huh? Or the experiment of mutating the living dead?”

At the end of the analysis, Levi Garrison found that the experiment of mutating the living dead was the most likely.

Earlier, Levi Garrison had heard from the traitors in the Lab of the Gods that this plan was used on huge creatures, and this was the original plan of the Lab of the Gods.

They just can't be realized, they can only be used on people.

However, a lot of data and examples are drawn.

It must be of great help to the experiment.

therefore.

Levi Garrison's preliminary judgment-the Lab of the Gods used this kind of experiment to create giant creatures one by one.

Once these giants appear, it is a disaster for this world.

The sheer size alone is enough to destroy one city after another.

The key is the experimental plan and special technology of the Lab of the Gods, making these giants like mutants of the living dead.

It has the characteristics of immortality and powerful attack power.

The variants of the living dead made by Maya Industries have such power.

It is conceivable that the technical experiment of the Gods Laboratory is definitely more powerful.

They solved what Maya Industry solved, and they solved what could not be solved.

Under the same circumstances.

The manufactured products must be dozens of times stronger than Maya Industries, or even hundreds of times more powerful.

Especially used on giant creatures.

Those Big Macs are simply world-destroying existences...

No wonder Lucifer and several people said that it would lead directly to the dark age of purgatory.

That's for sure!

The number is not yet known.

In case there are too many.

All over the world, it is a disaster, and it will soon turn the world upside down and devastated, just like purgatory.

This really entered the dark age.

The scary thing now is that I don't understand these Big Macs at all. To what extent can they be terrifying?

Levi Garrison may cope.

But if there are too many, it will appear all over the world.

He will not take care of it.

If the Gods Lab dispatches real masters again, he may be entangled.

So if you deal with this, I hope you can't put it on his own combat power.

What's more, Levi Garrison didn't fight a battle that was unprepared.

He has always prepared for a rainy day.

You have to prepare in advance.

Prevent this from happening.

But there is a possibility...

The prediction was wrong.

The plan of the Lab of the Gods is not to use the mutant Big Mac.

But the other way.

Once this is wrong.

The consequences are unimaginable.

On the one hand, Levi Garrison will prepare in vain, and on the other hand, he will not have time to deal with unexpected situations.

So first you need to bet!
