

The Return of the God of War [The Protector] Chapter 2696

The best way is to build such tall buildings on land, blocking the Big Macs, and letting their range of activities only be at sea.

This move is more difficult.

Move the whole body by pulling a hair.

Once you want to use it.

Too much manpower and material resources are needed...

The cost and effort is unimaginable!

Don't talk about the whole world.

Just Daxia.

If you want Daxia to avoid danger, you have to build a towering city wall on Daxia's vast border to block the Big Mac.

It's the entire border!

The land in Daxia is vast, too big and too big.

The border is too long and too long.

If towering city walls were built around it, it would be an unimaginable investment.

The materials used to construct the city walls have to be completed by the whole nation!

Not even enough!

After all, today's city walls are not those that can be easily completed like stones, but need to be hard enough to withstand majestic attacks.

Then the material needed should be top metal or top material.

It must be the rarest resource.

If you use such materials to construct the city wall, you really need to unite the whole Daxia.

Almost this top-level material has to be hollowed out, or even excavated or purchased abroad, in order to meet the demand.

The power of the whole country is not necessarily enough.

It's hard and hard.

Secondly, the construction of defensive walls requires a lot of mechanical manpower.

This need is also super super big.

Every aspect of demand is like a bottomless pit.

Only when you have been madly invested can you have a chance.

Another point is time.

If a defensive city wall is built around Daxia Land in more than ten years or seven or eight years, fortunately, it can be completed with a little hurry.

But now there is only less than three months.

And if you want to finish it before, then you only have two months.

In two months, all aspects of the cost will be greatly increased.

Resources, manpower, technology, etc. will increase by tens of times, hundreds of times!

It really needs the power of the whole country to do it!

The critical time is too short.

This is impossible!

Things that the entire nation cannot possibly accomplish.

If Levi Garrison proposes now, how many people will do it?

Who can afford this kind of risk?

Let alone whether I believe Levi Garrison's prediction is coming.

Just believe it.

To build defensive walls.

It takes the power of the whole country to build it. Who will start this?

If it succeeds in the end, you are the hero who sings for a thousand years!

But if you fail, you will be a sinner through the ages!

No one is willing to take this risk!

The real one affects the whole body.

Once this matter starts, there is no way to go back, all have to be invested.
