The Return of the God of War [The Protector] Chapter 2754

Although the anomaly was detected the first time.

I don't know what happened. Other people appeared in the monitoring station, and all the monitoring personnel were wiped out.

No one is left.

Yes!

All the monitoring stations used in the sea area encountered exactly the same situation.

One by one death!

The transmission of the monitoring station was immediately interrupted, and there would be no feedback to Daxia headquarters at all.

Hundreds of monitoring stations failed at the same time…

It is equivalent to useless.

Wrong!

All this is arranged by the Lab of the Gods!

Send people to pay attention to the major monitoring stations early, and when the operation is underway, the monitoring stations will be destroyed one by one.

Let it fail!

Originally, the monitoring stations were very secretive.

Even if the Lab of the Gods and the Nation of the Eagles go to find it, it is basically impossible to find them all.

It's not bad to find a quarter.

But when the smoke bomb was released last time, Daxia exposed all the deployment, including firepower configuration, monitoring configuration, transportation configuration, medical configuration, and so on.

It is equivalent to being transparent to the Lab of the Gods.

There will be no more secrets!

It seems that the last time Daxia was a complete victory!

In fact, the loss was a mess!

Almost everything is exposed!

Everyone is just a small move, but you even hand in the big move.

Therefore, the Lab of the Gods will also know that the monitoring station will find anomalies, and if Daxia knows it in a short time, it will quickly establish a defensive line.

After all, in the last battle, Daxia let the world know what Daxia speed is.

That's terrifying!

It is bound to cause huge troubles to the plan of the Gods Laboratory.

Therefore, these monitoring stations have long been targeted by dead men arranged by the Gods Laboratory.

Once an abnormality occurs, they will immediately take action to destroy everything in the monitoring station.
