

## The Wife I Picked Up Is Too Chapter Chapter 927

“Hmm... This thesis of yours is actually only so-so. There’s nothing unique or especially eye-catching about it. The only good thing is the final conclusion. It’s really difficult for me to find anything worthy of praise.” Feng Qing commented as she flipped through the thesis manuscript.

The laboratory chief looked at Feng Qing quietly. He was the closest to Feng Qing, and from his angle, he could see the content of every page of the thesis that Feng Qing had flipped to. Following Feng Qing’s evaluation of the thesis, the laboratory chief realized that Feng Qing was surprisingly familiar with the Pi virus. Moreover, her words were filled with academic vocabulary, not like an outsider who did not understand at all. Instead, her words were firm, making the other research institutes in the laboratory turn around and look at Feng Qing eagerly.

After hearing Feng Qing’s words, the chief said in surprise, “Young Madam, have you been researching the Pi virus like Ruoyun? How can you have such a deep understanding of the Pi virus?”

Feng Qing looked at the chief and said very calmly, “It’s not considered in-depth. When I learned about other viruses previously, I happened to read a few medical studies about the Pi virus.”

What everyone did not know was that she had already said this in a very low-key manner. She had done very deep research on the Pi virus. It would not be an exaggeration to say that no one knew the Pi virus better than her at the moment. It was also because she had studied this virus thoroughly that she developed the terrifying poison powder, ‘Powdered Spore Bloom’, in the hands of Mr. Qingyi, the ‘Poison King’.

This poison powder had always been highly respected in the black market. After Feng Qing’s research, this poison could stick to the fur of all animals. Once someone touched this poison, even if it was a light

touch with their skin, the poison would penetrate their skin and enter their bodies. This poison had fully inherited the genes of the Pi virus and would flow through their bodies like round plant spores. A few minutes later, the virus spores would start to 'bloom' with the help of blood. Then, the people who were poisoned would start to rot from the inside of their bodies. Moreover, animals who were infected with this poison would not be affected. They would kill people invisibly and turn their blood and flesh into rotten water. The 'Powdered Spore Bloom' had become a nightmare for everyone with its special characteristics. Moreover, this process of making this poison is too complicated, Feng Qing is too lazy to make it. She would at most make thirty grams of it and sell it on the international black market.

However, what surprised Feng Qing even more was that Xie Ruoyun had spent a huge sum of money to buy the 'Powdered Spore Bloom' she had developed on the international black market, which was why she had obtained the Pi virus for laboratory research.

"The poison developed by Mr. Qingyi of A Dark Organization is called 'Powdered Spore Bloom' because this virus enters the human body in the form of plant spores. In the test tube, this virus will appear pink and look very beautiful. The lower the temperature, the deeper the pink this virus will appear, and the more it will condense into the form of plant spores. You've been diligently researching the Pi virus for three years. I think it's because you want to develop an antidote for it. If that's the case, I suggest that you start with the original pathogen of the Pi virus." After Feng Qing finished reading all the content, she raised her head to look at Xie Ruoyun and gave her opinion.

With that, she even returned the original manuscript of the thesis to Xie Ruoyun and continued, "Studying the 'Powdered Spore Bloom' refined by Mr. Qingyi is based on Mr. Qingyi's understanding of this virus. No matter how well you study it or how thorough it is, it's useless because it's not your research on the most fundamental Pi virus. Therefore, the results of such a thesis can't be attributed to you completely. You even have to record half of the credit to Mr. Qingyi."

At the end of her speech, the corners of Feng Qing's mouth couldn't help but curl up. There was a faint smile in her large beautiful eyes. Everyone else could tell that Xie Ruoyun wanted to embarrass her, so how could she not tell? However, before she saw the thesis, she couldn't imagine that Xie Ruoyun's

research on the Pi virus was done on the poison made by Mr. Qingyi. Wasn't this equivalent to Xie Ruoyun taking the initiative to let her slap her face? If she still didn't slap her, would she still be Feng Qing?

Feng Qing couldn't help but say, "If I were your mentor on this topic, I definitely wouldn't pass this thesis of yours. I would even tell you that unless you write Mr. Qingyi's name on this thesis at the same time, you can take it back and redo it."
