Chapter 919

“No, she didn’t. You may go and rest.” Jared said before Nicole could say anything.

Tia stood on the stairs and scratched her head. “Looks like I was hallucinating.”

“Lead the way. I need to rest early because I have to work tomorrow,” Jared said with a straight face.

Nicole could only lead her to her bedroom. When she walked into it, and before she could react, Jared pressed her against the

wall. The only sound left in the quiet room was Nicole’s thudding heart.

“Are you nervous?” Jared teased her.

Nicole gulped. “What do you say?”

Jared stroked her hair and then planted kisses on her lips.

The next day, Jared drove her to the office. Just as she arrived outside his company’s building, Max came up and handed an

envelope to Nicole. She turned to Jared and asked in puzzlement , “What is this?”

“Take a look and you will know.” Jared was creating suspense.

Nicole took the envelope and opened it—it was a set of car keys. “This is for me?”

“Yeah. Since you have to go around places frequently, I bought you a car.”

“Where is the car?”

“Press the key fob.”

Nicole did as Jared said and pressed the key fob. She was shocked when she saw the signal lights of a Lamborghini parked not far away flashing. “A Lamborghini?”

“Mr. Johnston took a long time to pick this one. He said it would go well with you, Miss Riddle.” Max explained it on behalf of

Jared. Nicole looked over at Jared. “Thank you.”

“You can go try the car. I’m going up to the meeting.”

Jared doted on her and tapped the tip of her nose before striding off into the building.

Nicole got into the car but did not know where to go.

Just then, the call she had made with Martin yesterday came to mind, and

she started the car. The roar of the engine caused her adrenaline to rush. She floored the gas pedal and sped toward Martin’s

lab. The car sped down a wide road, and the car made heads turn wherever it went. Soon Nicole arrived at the hospital where

Martin was working. After parking up the car, she got out of the car and walked into the hospital.

“Martin, I’m almost there. You are in the lab, right?”

Nicole called him on the phone as she walked. “I’m in the lab. Come straight up here.”

Nicole hung up the phone, went to the lab door, and knocked. Martin opened it for her from inside. “Glad to see you here, Nicole.”

“So what’s up?” Nicole looked at the progress of his experiment and got straight to the point.

“The list you helped me revise last time is now unusable. I would like to discuss with you what materials to replace it with.” Martin took out the experiment records and the list of experiments.

“The last experiment has only one head control and is part of the first-generation product. It is unstable in every way.”

“This time The Beacon is part of a complete upgrade that has to be studied in depth in terms of performance and stability.” This was the advice Nicole gave him.

“You are right. This is what I was thinking. The raw materials I was looking at weren’t too ideal.” Martin looked as if he had been

defeated.

“I will work with you to figure out the material problem.” Nicole looked at him with a serious face, hoping she could do her small part to help him.

“Thank you, Nicole.” He felt more assured that Nicole was by his side.

“You are welcome. Make a list of the materials you need. I will try to see if I can find some for you to experiment with first.”

“Okay.” Martin immediately took a pen, wrote it out, and handed the list to Nicole.

Nicole glanced at the list. “I will see what I can do. Wait for my message.”
